1 Introduction

"LIMS" means Laboratory Information Management System. It is a software-based system designed to monitor and manage various aspects of laboratory operations, such as sample tracking, data management, workflow automation, and monitoring LIMS are commonly used in science and research facilities across industries, including pharmaceutical, biotechnology, environmental testing, forensic research, building material labs, automotive labs, chemical testing, civil testing, textile testing lab and research institutes. LIMS' primary functions include specimen registration and tracking, test planning and selection, data capture and management, instrument integration, quality control and compliance management, results reporting, and data analysis LIMS help streamline laboratory processes, improve data accuracy, efficiency, and ensure compliance. It provides an on-site facility for collecting, organizing, and receiving laboratory data, and facilitates collaboration between scientists and engineers.

1.1 Who can benefit from E-Labs LIMS?

Laboratory Information Management Systems (LIMS) can help laboratories, scientists, engineers, quality control teams, data management and research teams, administrative staff, as well as clients and customers LIMS streamline laboratory operations, improve data integrity maintains, improves efficiency, ensures compliance, data analysis reporting and streamlines, optimizes -Enables product management and delivers timely and accurate results to customers.

1.2 Key Features

- Sample Management
- Workflow and Task Management
- Data Management
- Instrument Integration
- Quality Control and Compliance
- Result Reporting

- Data Analysis and Visualization
- Audit Trails and Version Control
- Collaboration and Communication
- Integration with Other Systems

2 Technical Specification

Area	Technology
Backend	Java
Frontend	Angular
Mobile App	Ionic Framework
Backend Framework	Spring Boot
Database	Mongo DB
Deployment	EKS – Kubernetes
Charts	Mongo Charts, Google Charts
Code	GitHub

3 Requirements

3.1 Minimum Server Requirements

- Microsoft Windows 7
- RAM 32 GB +
- 8 Core Plus
- MAC OS X 10.4 or later
- Internet Connectivity
- 1 x USB port

3.2 Minimum PC Requirements

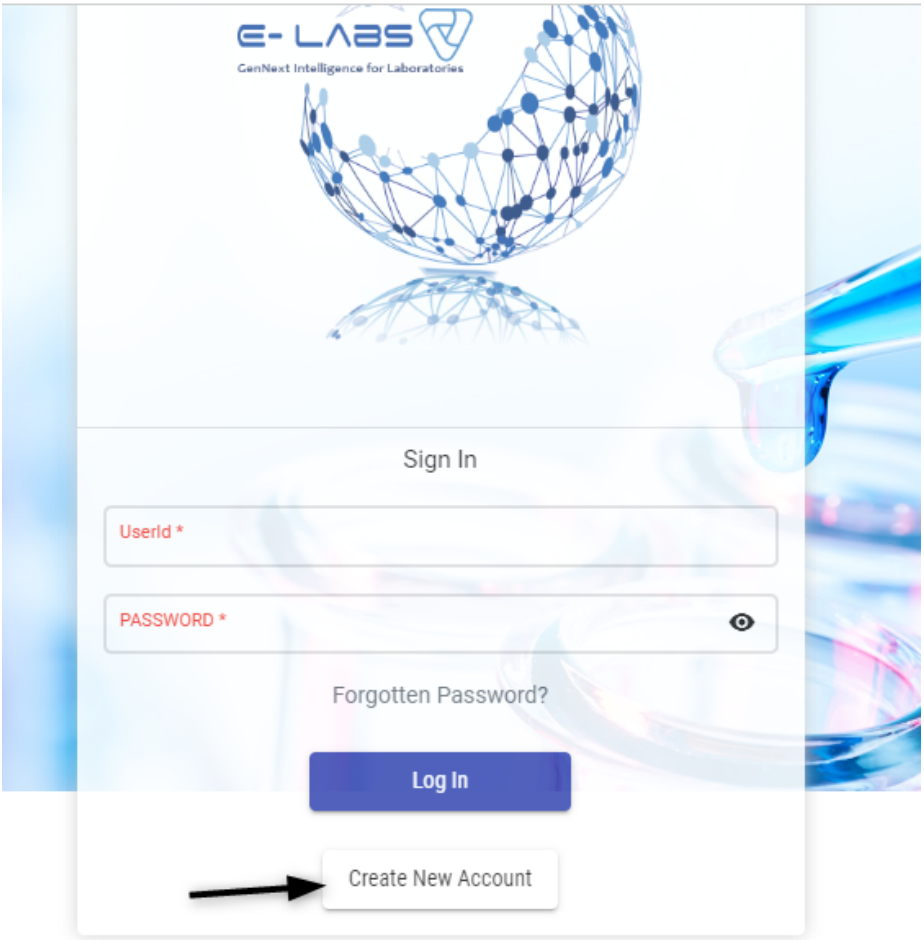

- Microsoft Windows 7 / Vista / XP SP2
- MAC OS X 10.4 or later
- Internet Connectivity
- 1 x USB port

3.3 Supported Web Browsers

- Mozilla Firefox
- Google Chrome

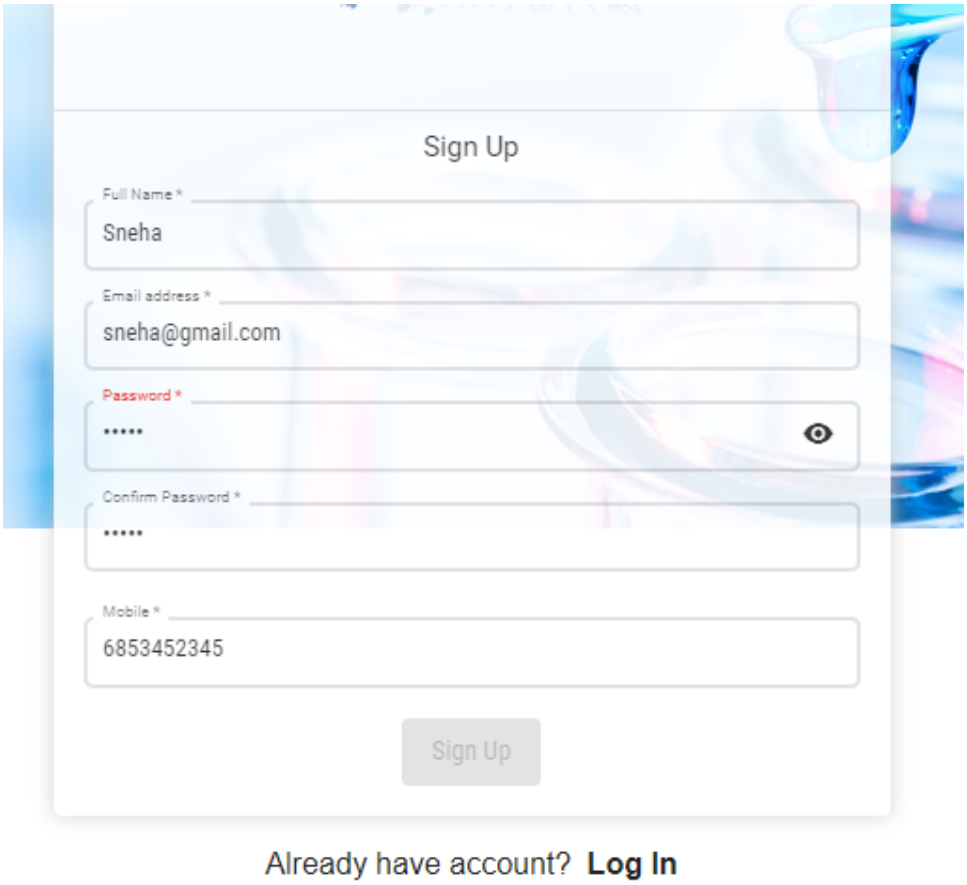

4 Getting Started

If the user is new to this website, he/she must first register. To do so, they need to click on the "Create New Account" option, as shown in the image below.

4.1 Create a New Account?

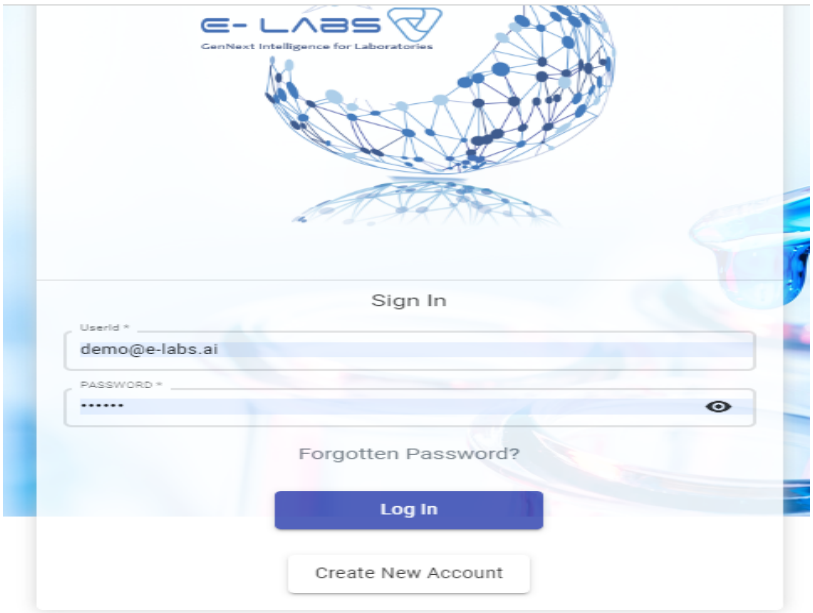

When the user clicks on the "Create New Account" option, the following screen will be displayed, they will need to provide all the necessary information.

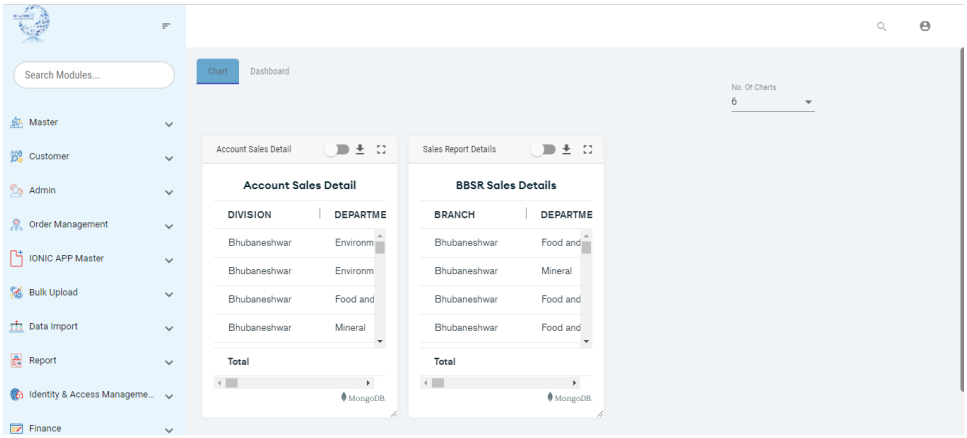

Once registered, the user can login to their account with their credentials.

4.2 How To Login Your Account?

Users must enter their credentials on the login page to access other pages of the software.

When the user logged into the website, the first dashboard page appears on the screen as shown in the following figure.

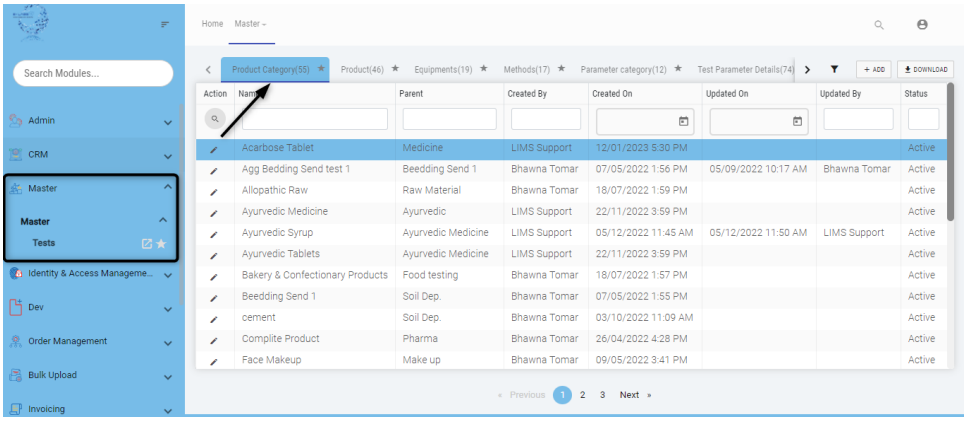

E-Labs

5 Product Master?

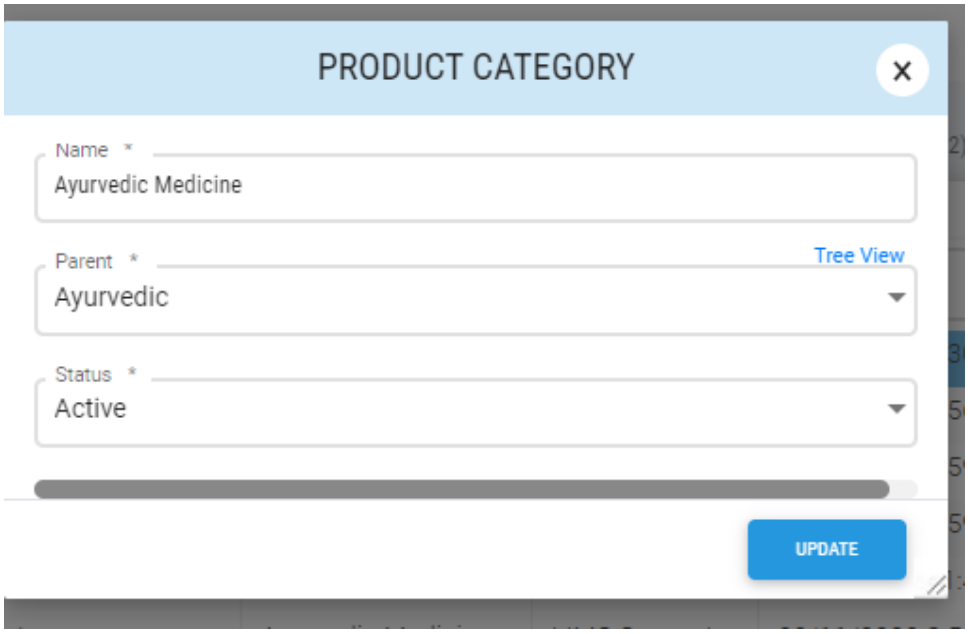

Our system is designed in such a way that all the data is integrated with other modules from the product master. So, for this, we need to create the product master first before populating the data in other modules.

5.1 Product Category?

Now click on the Master module to enter the data into the product master and you will land on the product category menu.

Click on the Add Button here and a popup screen will appear on your screen.

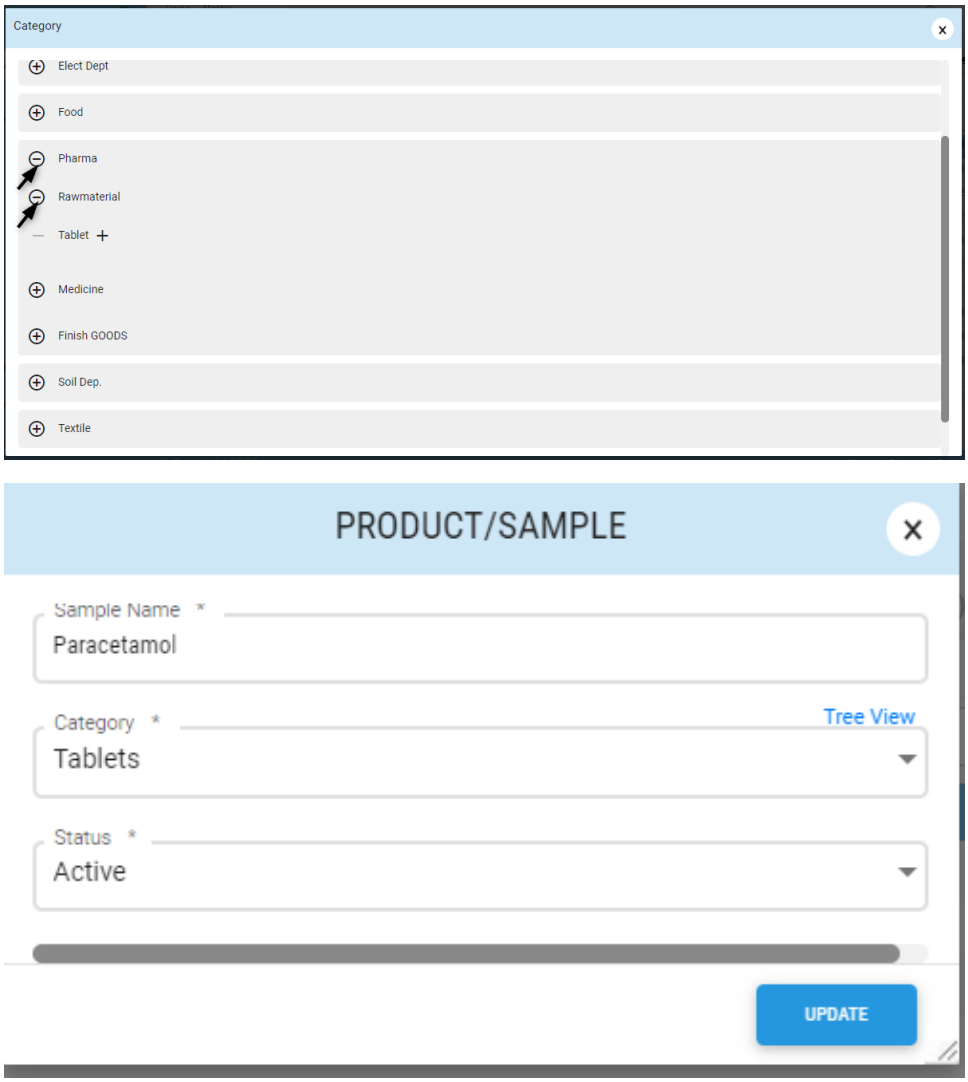

In this screen you are going to add a product category, for example- under pharma there are three categories like finished goods, raw materials and other. When the user clicks on the Tree View option, the screen shown below appears.

Here you can choose a parent for the product category using this option. Now if I take the example Pharma-finish products-tablet-paracetamol. There is paracetamol product, tablet is product category which comes under finished goods and pharma is department. So, this creates hierarchy here.

5.2 Product?

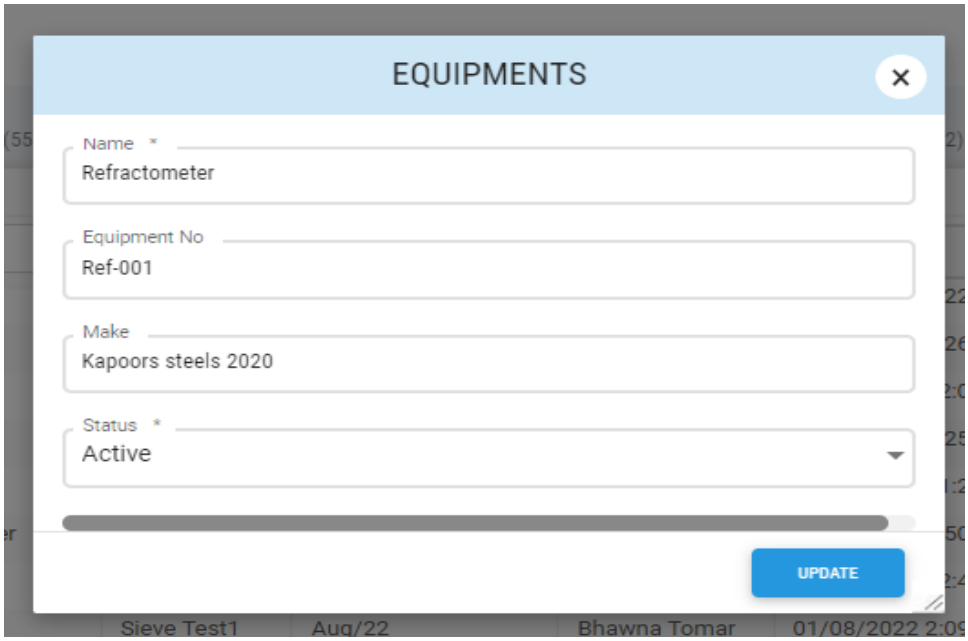

To add product under product category, the user should click on the Add button and a popup appears.

In this window you can give a product or sample and select a category by clicking Tree View option. Also, set the status as active and then the user can click on the save button for saving data.

5.3 Equipment?

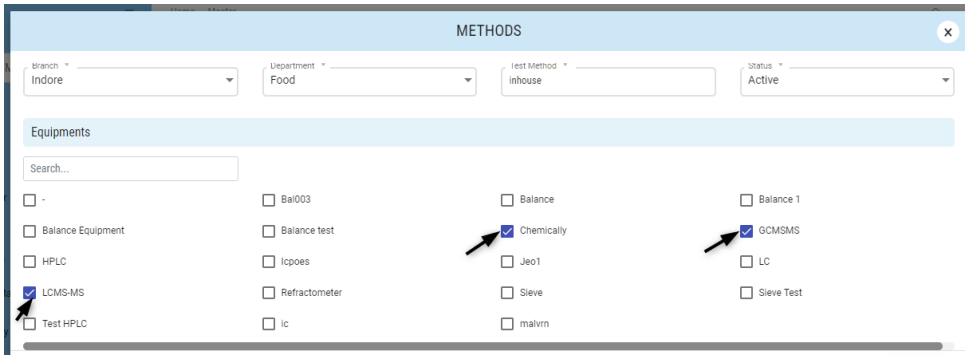

This is the part where basically all the equipment for testing in the lab should be included. For this, click on the Add button and a popup screen appears.

- Name- This is the field for the equipment's name.
- Equipment No- This is the serial number for any equipment.
- Make- When was the equipment made.
- Status- Select active if the equipment is currently active.

5.4 Methods?

The details of the method and the tools that can be used to test that method. Such information can be stored in this section under the method name. The user should go to the Method tab and then click on the Add Button.

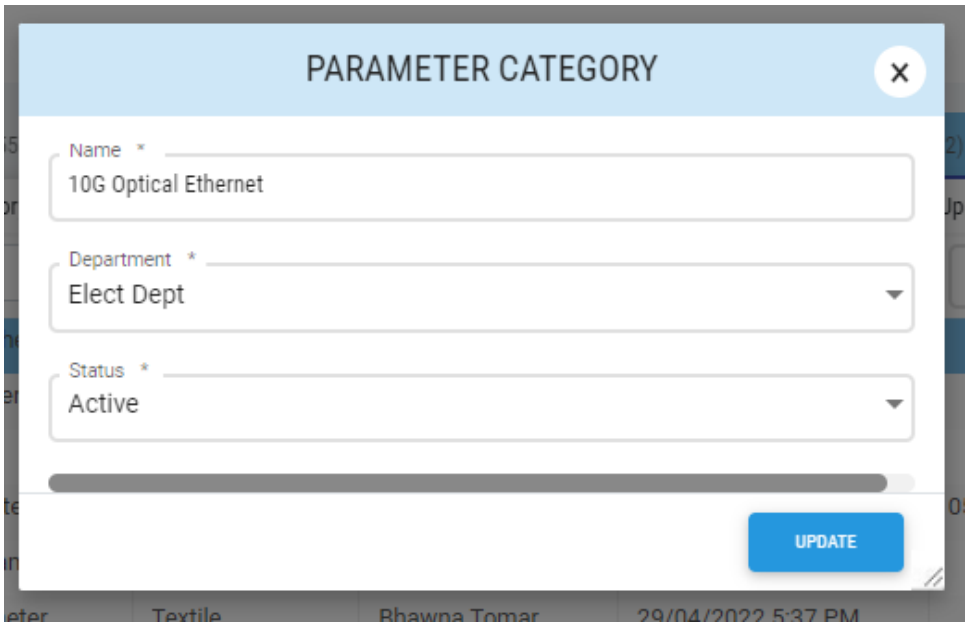

- Branch- For which branch this method is being made.
- Department- For which department this method can be used.
- Test Method- Name of the method.
- Status- Set status of the method

Equipment (optional)

In this section the user has the option to select the equipment on which this method can be applied by simply checking the checkbox.

5.5 Parameter Category?

As the user adds the Product category, the Parameter category will be added to this section. Go to this tab then click on the Add button.

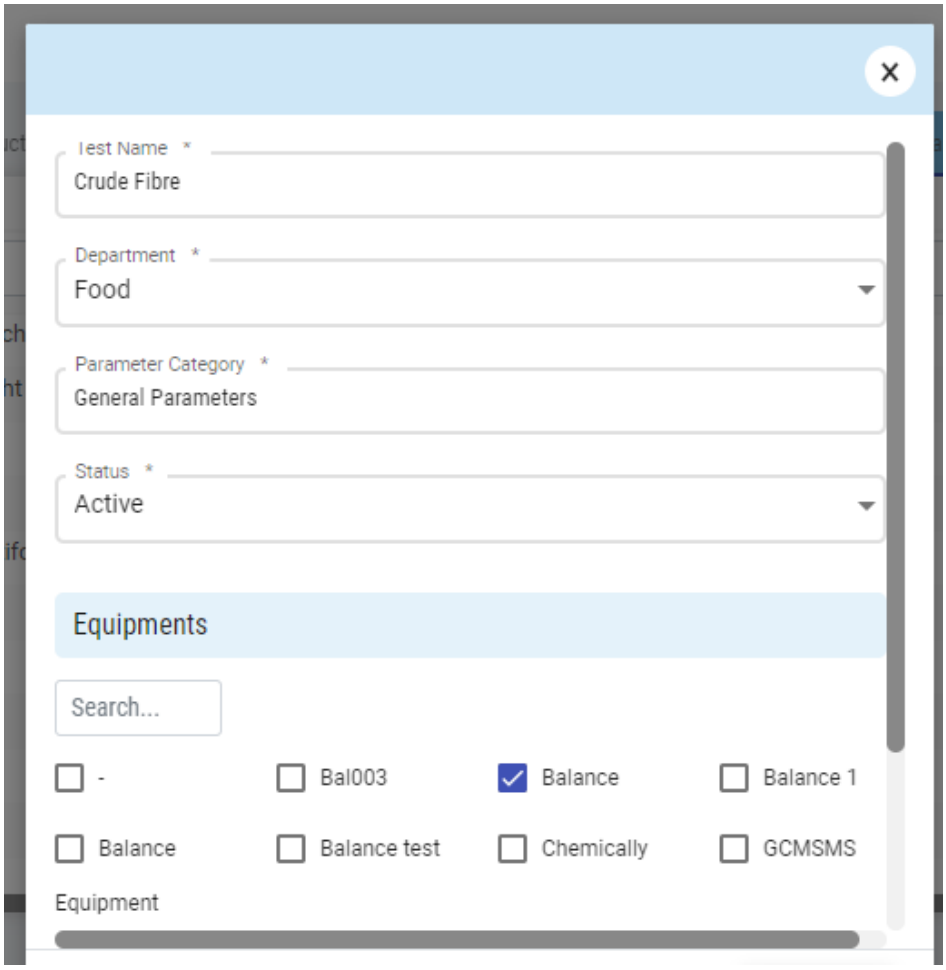

In the image above, the user can fill in all the required information.

- Name- Name of the parameter category
- Department- Which department does this category belong to
- Status- Set active if it is currently in use and set inactive if not.

Once the parameter class is saved, the user can switch to the Test parameter details tab. Click on the Update button.

5.6 Test Parameter Details?

- Test Name- It represents the name of the test.
- Department- For which department this test name can be used.
- Parameter Category- Under which parameter category does it belong.

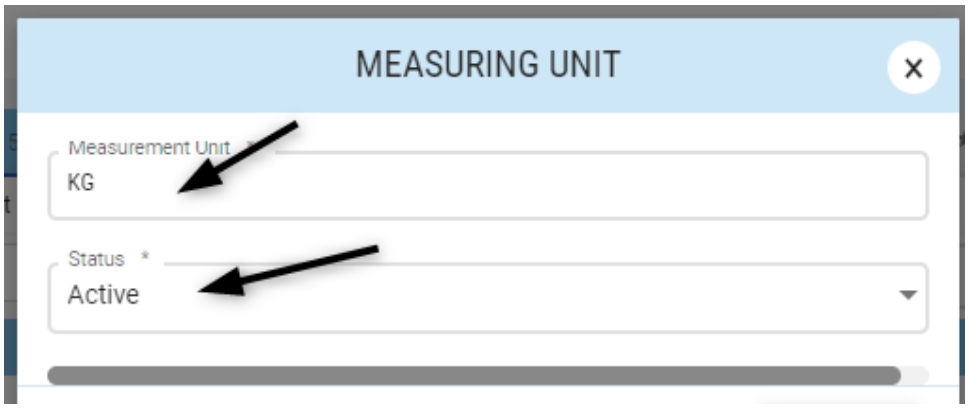

Equipment (optional)

In this section the user can easily select the equipment for which this test parameter is applicable by clicking on the checkbox to mark it as ticked.

E-Labs

5.7 Measuring Units?

All the Measurement Units data we use can be stored here.

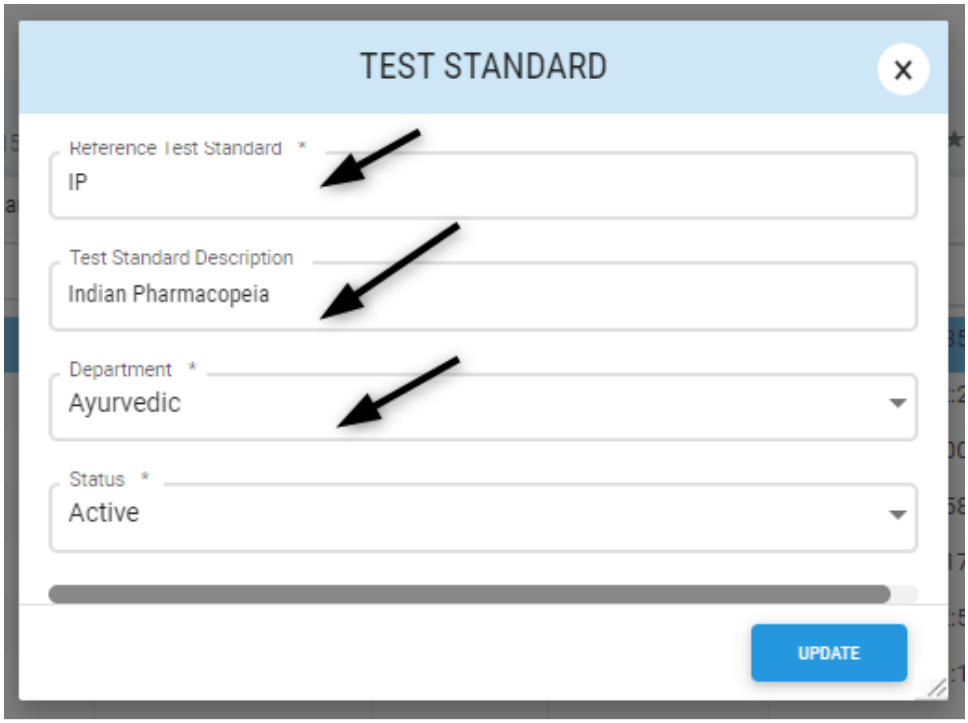

Fill in the name of measuring unit and status as active if it is currently in use then click on Save button.

5.8 Reference Test Standard?

Users can add Reference Test Standards based on specific test standard descriptions, such as British pharma or Indian pharma. This allows them to modify the testing process according to their preferred pharma.

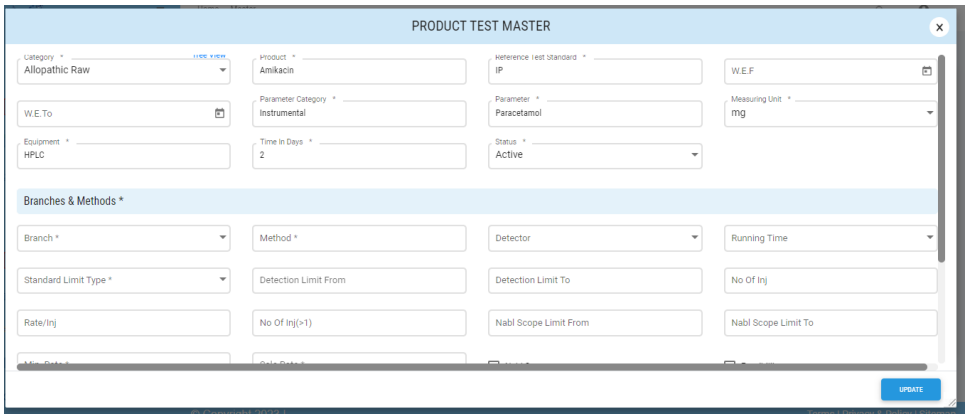

- Reference test standard/Reference protocol- It is the test standard according to some specific regularities which you want to choose for your parameter testing.
- Test standard description- It is the book's name which you want to choose for testing.
- Department- For which department do you want to use these test standards.

All the above steps have been taken to create Product Test Master.

5.9 Product Test Master?

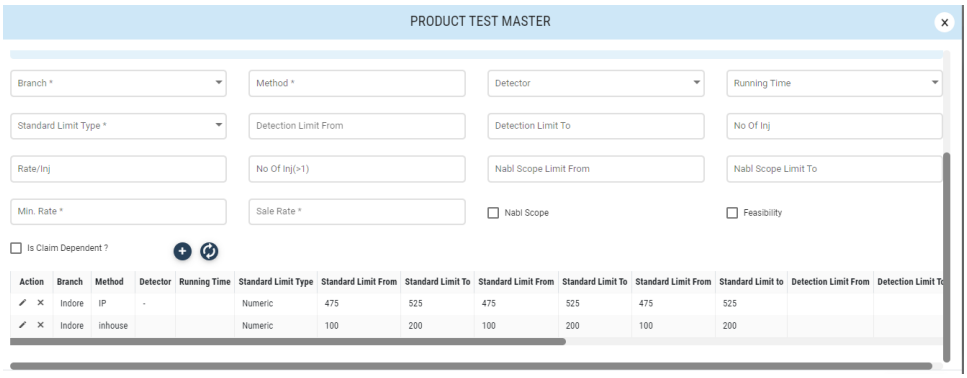

Go to the Product Test Master tab and click on the Add button. The following screen will appear.

Fill in all the necessary details.

- Category- Select category of the product.

- Product- Name of the product.
- Reference test standard- Fill reference test standard for the product's testing.
- Parameter category- Fill parameter category for the product/sample testing.
- Parameter- Fill parameter for the testing.
- Measuring Unit- Enter measuring units.
- Equipment- Fill equipment which can be used for testing.

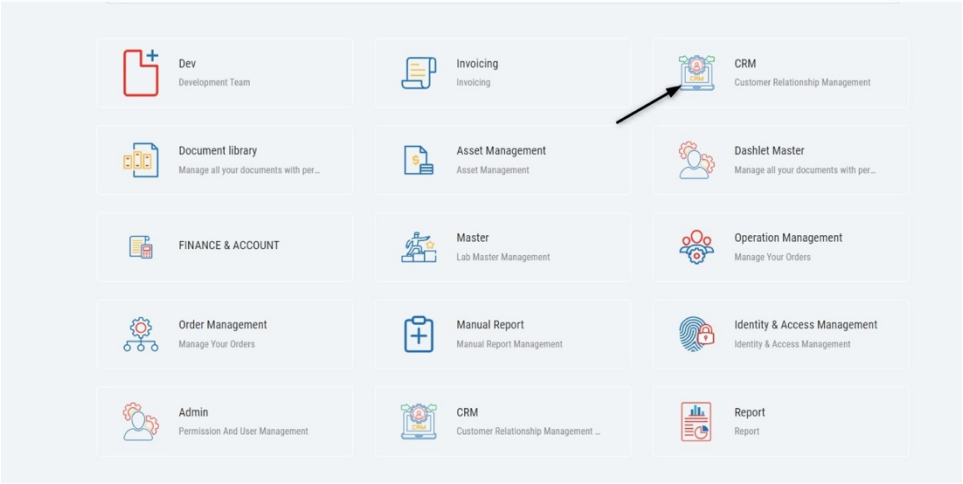

In the branches and methods section, you must fill in all the necessary details according to your requirement and then click on + icon to add those details.

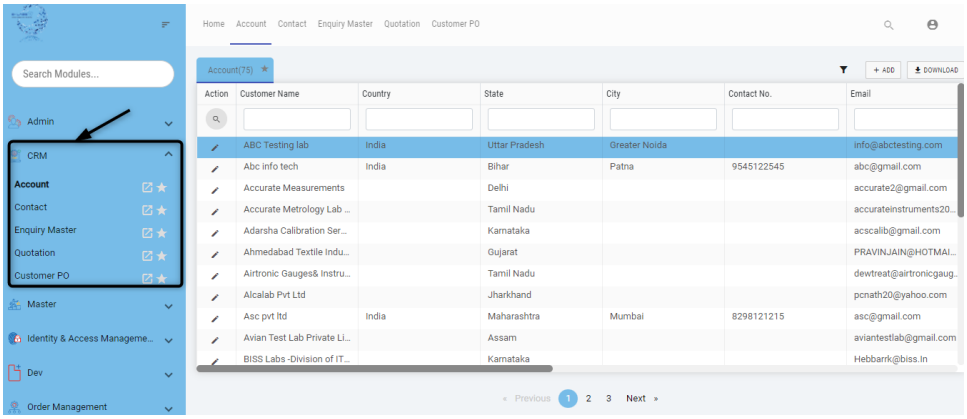

Once you create Product Master, then the details in Product Master will be auto populated in CRM module and Order Process Management.

6 Customer Relation Management (CRM)?

To access the CRM module, navigate to the CRM option, which may be displayed either horizontally or vertically.

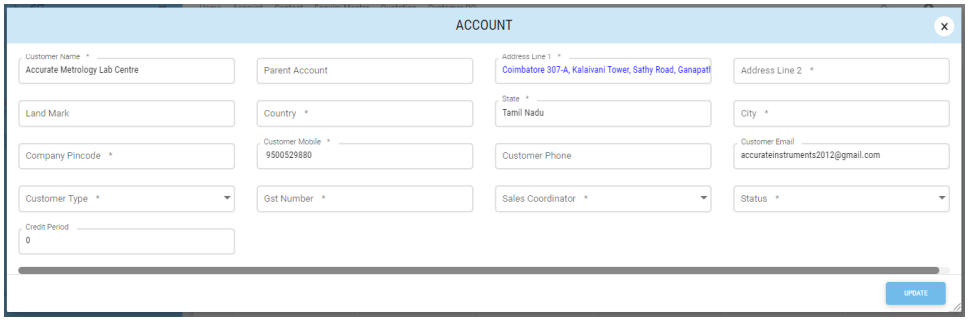

Horizontal Option Of CRM

Vertical Option of CRM

6.1 How To Enter Details in Account?

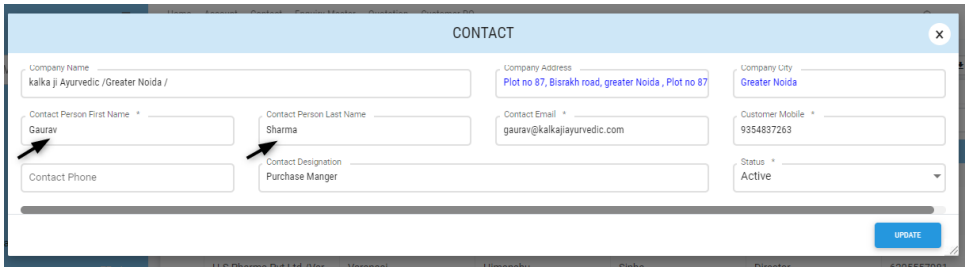

The Account section is a company name and have all the details of clients who have their samples tested in the laboratory. To access, click on Account followed by Add button, then the following screen will appear.

- Customer Name – This is the client's company name.
- Parent Name- If the Company has a parent Company, then fill in here.
- Address1 and Address2- Address of the company.
- Customer Mobile- Customer's mobile number.
- Customer Email- Customer's email id.
- Customer Type- For the customer type, choose either "Government" or "Private" accordingly from the dropdown menu.
- Sales Coordinator- Choose a sales coordinator who will be using this feature.
- Status – Select the status either as active or inactive as per your requirement.
- Credit Period- Fill in this option if you want to receive payment from the client at any specific time. That time will be mentioned here.

6.2 Create Contact?

We can create multiple contacts against a single company name.

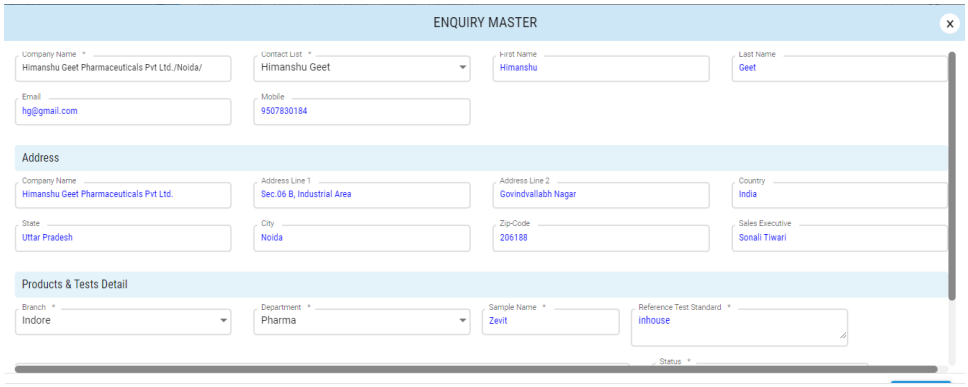

Fill necessary details here like

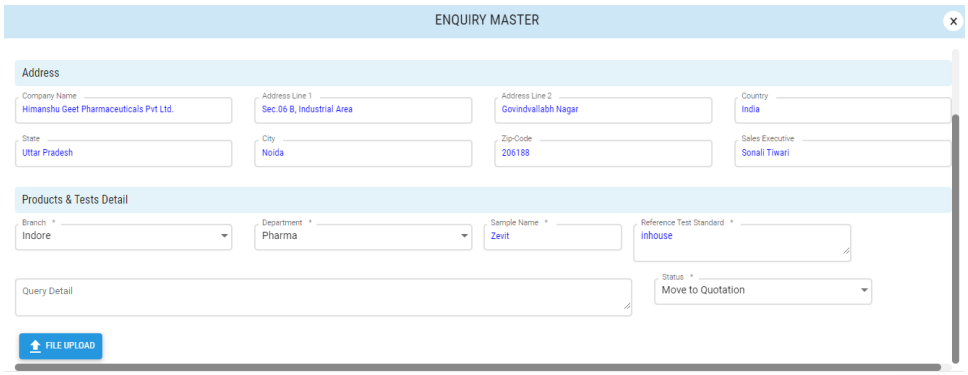

- Contact Person First Name
- Contact Person Last Name
- Contact Email
- Customer Mobile
- Status

6.3 Enquiry Master?

Enquiries are generated by the sales executive of the lab. The details of the Sample, Parameter, Reference Test Standard, Customer and Contact person will be mentioned by the sales executive during the generation of the query. Whenever a customer has a query, his/her information should be stored in this section. For this, click on Enquiry master then click on Add button if it is a new enquiry. The following screen will appear.

When user selects Company name and Contact list the details of the contact person and company will be auto reflected

In the Products & Tests Detail section, users must enter sample and its query details.

- Branch- Select the branch where you receive this enquiry.
- Department- To which Department does it belong.
- Sample name- Name of the sample
- Reference test standard- Mention test standards for the sample
- Query Detail- Sometime user send any photo or pdf file regarding query details then you can upload here by clicking on File upload button.
- Status- Status changes according to the enquiry stage which is mentioned below.

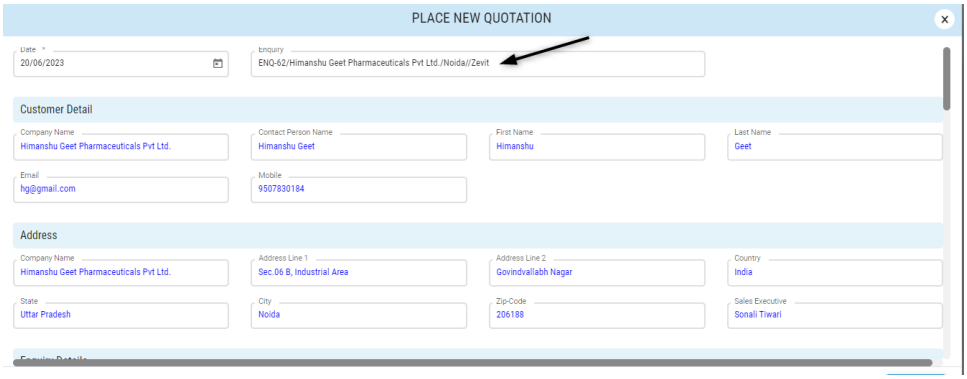

a) When user creates new enquiry then the status will be New

b) If the enquiry goes to another lab, then the status will be Regret.

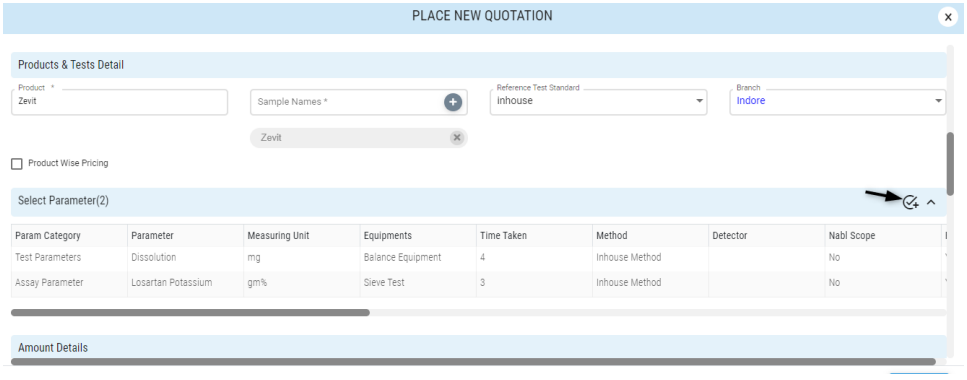

- When a quotation is generated for this enquiry, the status will automatically change to 'Move to Quotation'.
- If we intend to verify whether our laboratory can conduct tests based on the given parameters, the results will be termed as feasibility check.

6.4 Quotation?

Quotation Letter- When the enquiry is being generated then we can create the quotation for the client. For this, first click on quotation then Add button.

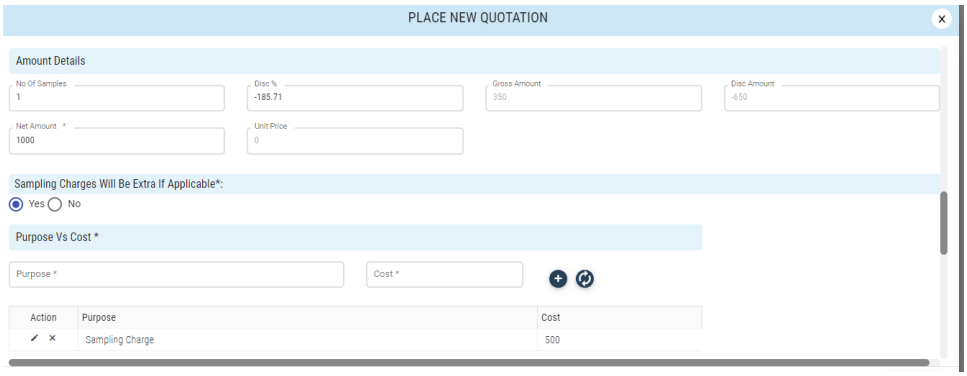

Select enquiry here for which you want to make quotation. Once you select enquiry all the details related to that enquiry will be auto populated

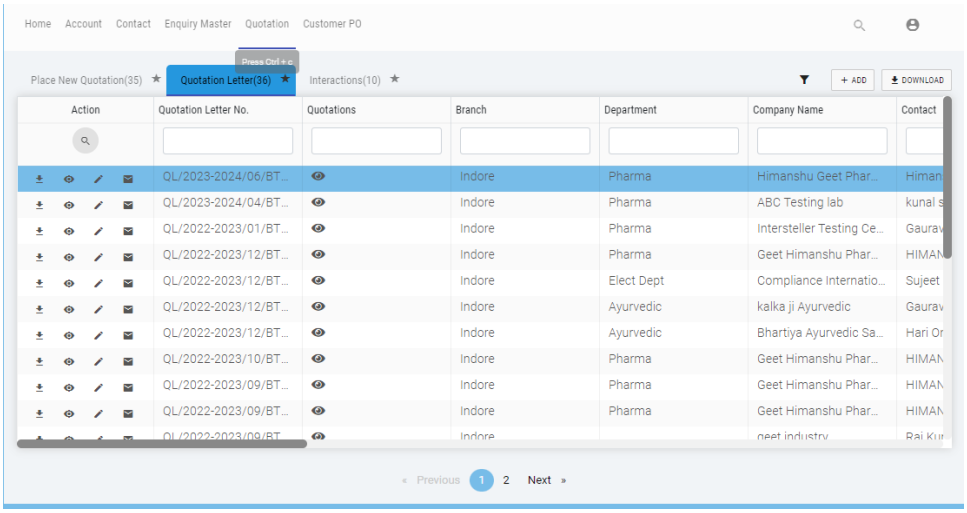

Note: - The product name and sample name may be different. If you have already created product master with the same parameters, you can use it in the product field. There is no need to create a new product test master.

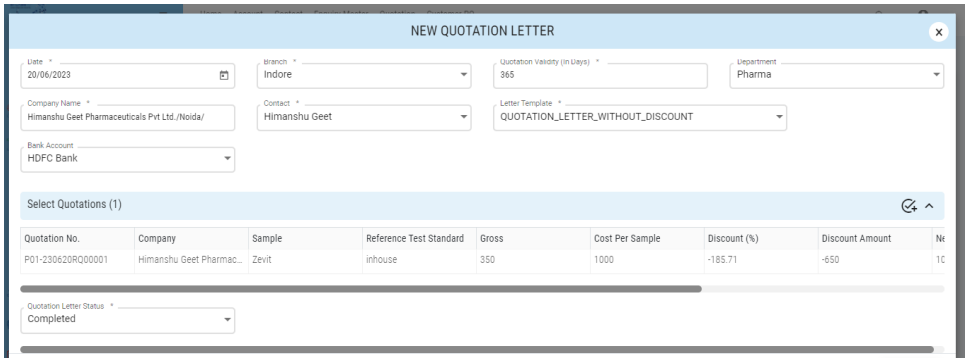

Product and sample names can differ just as generic names can. To test any parameters, you can assign parameters by clicking the + sign in the Select Parameters section. The popup screen appears, and you can provide the desired parameters.

If you have applied for some discount in your parameter list, then the details will be displayed in amount details. Then, you can select the sampling charges option if there is any additional charge you wish to include. After this user can proceed by clicking on Add button for saving these details.

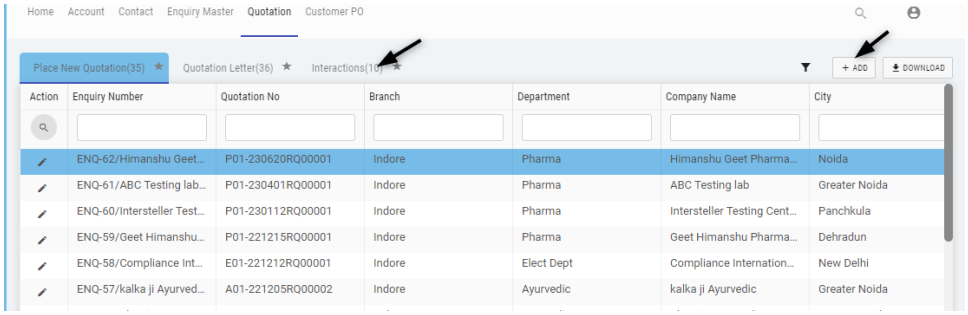

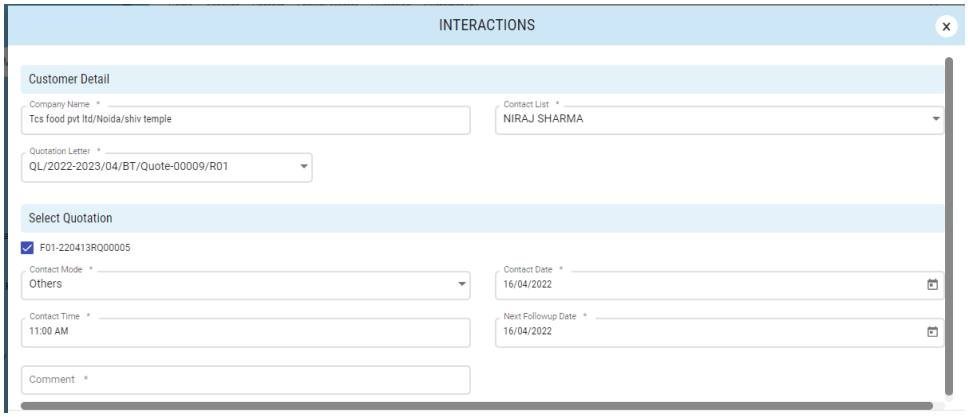

Quotation Letter- We can club all quotations against different departments for a single client. Also, when the customer seeks a discount or if adjustments are necessary for any other reason, modifications can be made in this tab. To initiate the process, navigate to the Quotation Letter tab then click on the Add button.

Fill in all the necessary details here, same as above image.

Interactions - If there is need for any form of communication with the client, access the Interactions tab and simply click on the Add button.

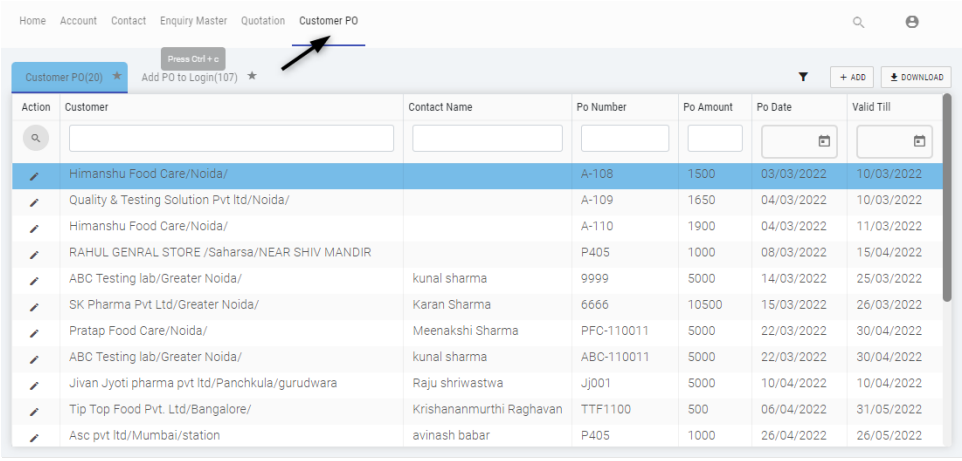

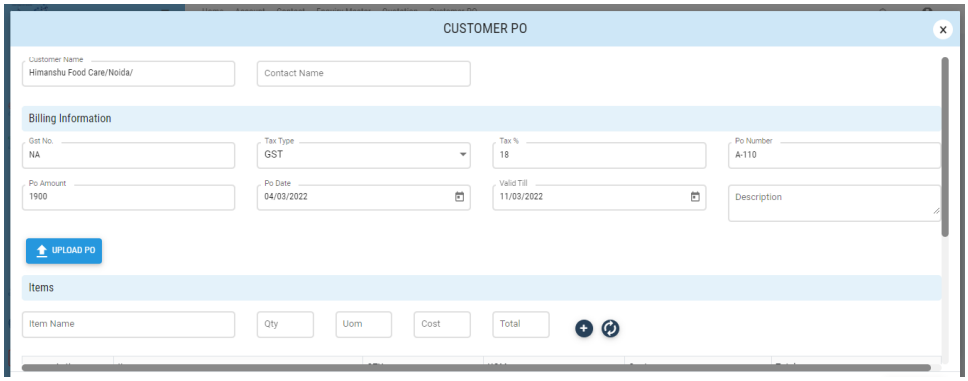

In the customer detail section, you must provide customer specific information. In the Quotation section, follow-up details can be entered. Interaction screen serves the purpose of following up with customers. If you select any specific quotation for the follow up, the interaction screen is the tool to that particular quotation.

6.5 Customer PO?

To save Purchase Order details go to Customer PO tab, navigate to Add button to enter details.

After clicking on the Add button the following screen will appear.

You can enter the customer's name and contact details here.

- Billing Information- GST No: If you have given GST No. then tax type will be auto selected.
- Tax Type: If you have not been given GST No. then you can type manually. Other details can be filled out here.
- Items- The items for which you want this PO to be generated, enter the details in this section.
- Amount Details- Details will be automatically calculated once all the details are filled in.

7 Order Management Process?

When we receive any sample from a customer or lab representative for its testing it goes from eight stages. You can take ideas from the below image.

The order management process flow goes from eight phases, shown in the below image.

Phase 1- Product Master Creation

Phase 2- Sample Receiving

Phase 3- Order Booking

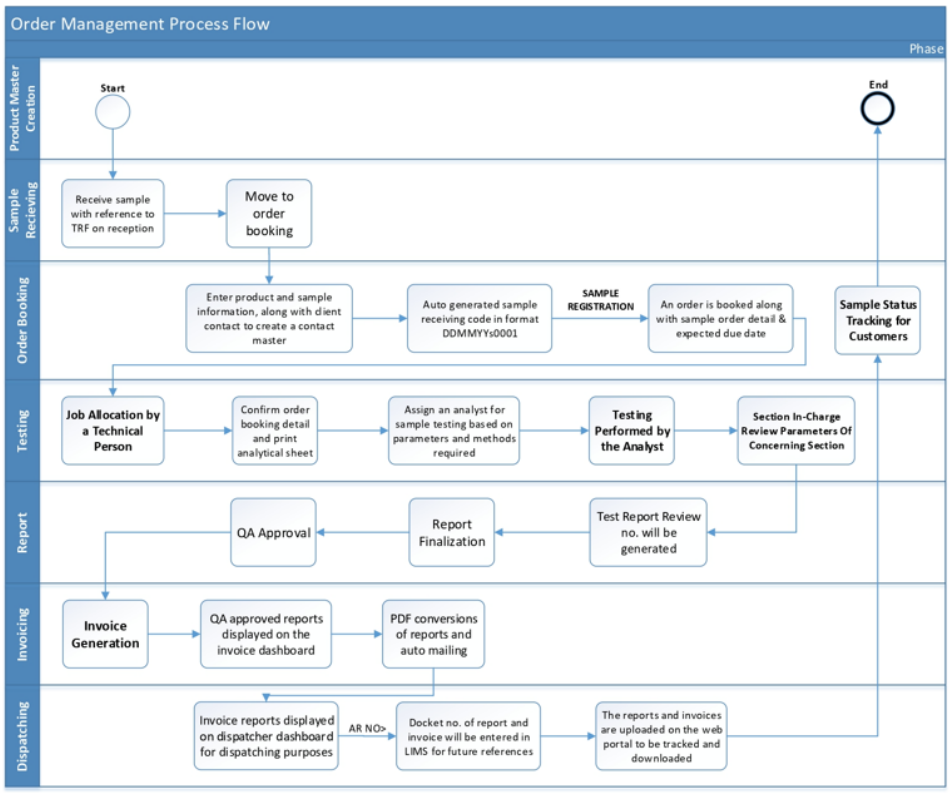

Phase 4- Schedule

Phase 5- Testing

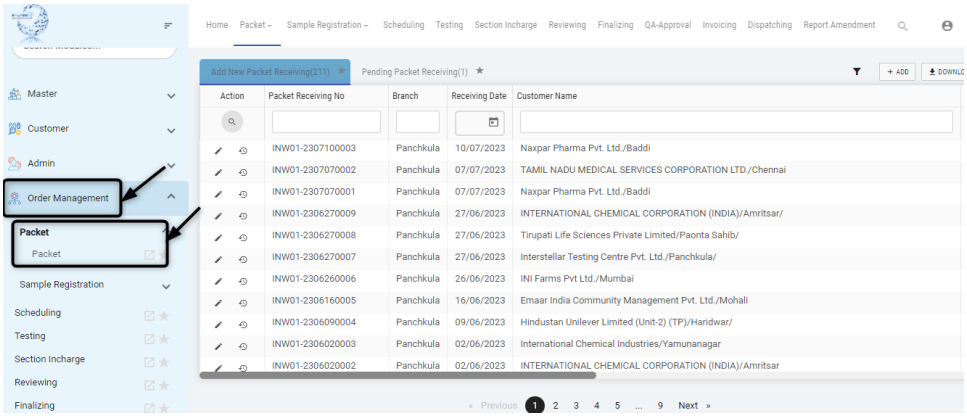

Phase 6- Report

Phase 7- Invoicing

Phase 8- Dispatching

Stage 1- First, we receive a sample then it goes to packet tab.

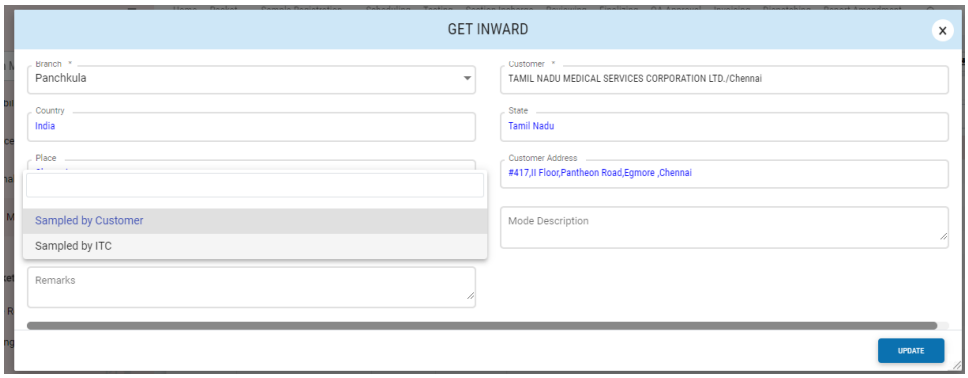

7.1 What is Packet?

A packet is a sample which the laboratory receives for its testing. It is received by the courier or through the lab representative.

7.2 How To Enter Detail for Packets?

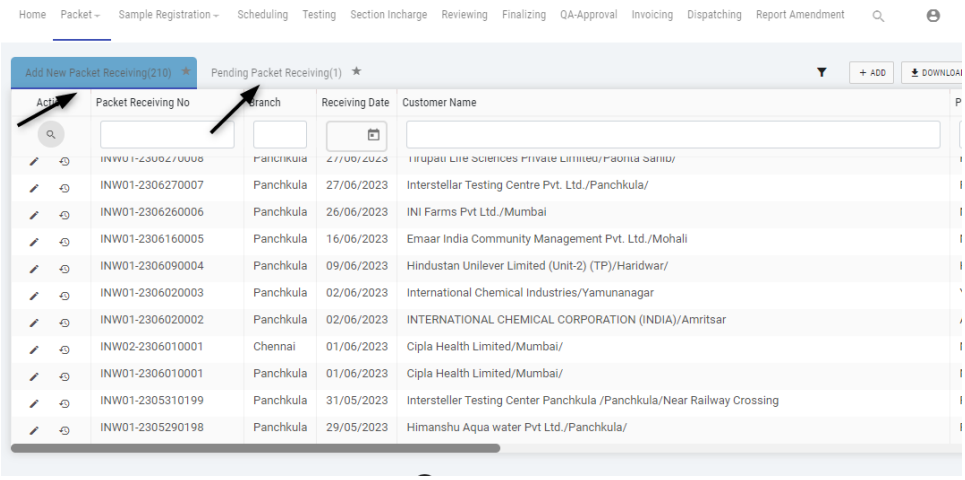

First, we receive packets that must be filled in packet tab. For this, click on **Order Management > Packet** from the sidebar which is on the left of the screen then the following screen will be appear.

In above screen you should fill all the necessary details. For example

- Branch- Which branch it is received.
- Customer- Customer details must be filled in here.
- Place- Customer's place must be filled in here.
- Customer Address- Customer's address must be filled in here.
- Packet Mode- User can select sampled by customer or sampled by lab depending on the requirement.

There are two tabs showing one is Add New Packet Receiving and the second one is Pending Packet Receiving.

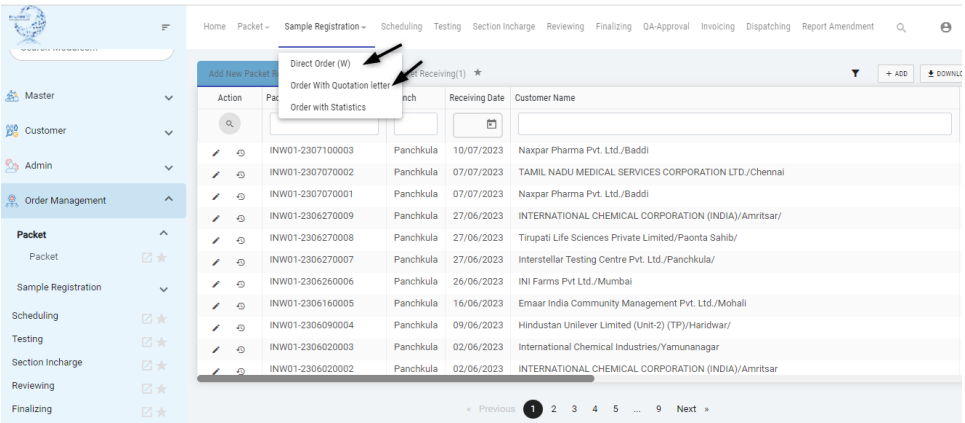

All New Packets Receiving - All received and booked packets are shown in this tab.

Pending Packet Receiving- All pending packets showing in this tab.

8 FAQs

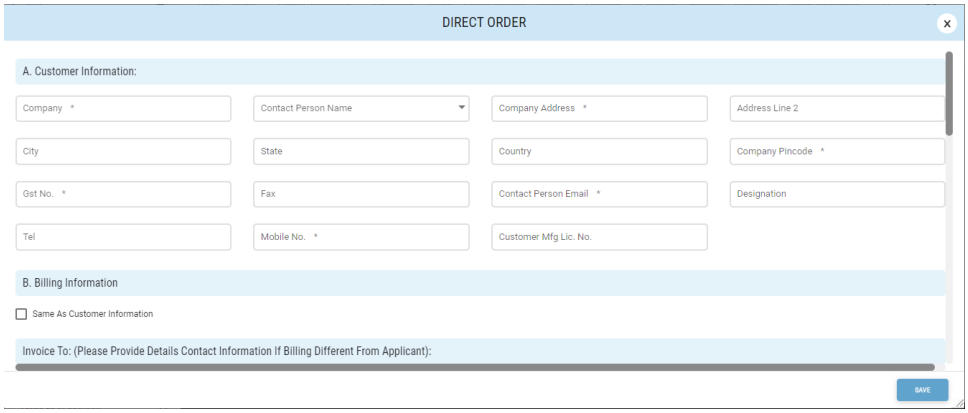

8.1 How To Enter Details for Sample Registration?

Stage 2- Now for order booking, click on Sample Registration tab then select Direct Order or Order with Quotation letter according to your requirement.

8.2 How To Book Direct Order?

i) Direct Order - You can book direct order if you have direct link with the laboratory then Direct tab and go to “Add” button. The following image will appear on your screen.

Here you can fill details,

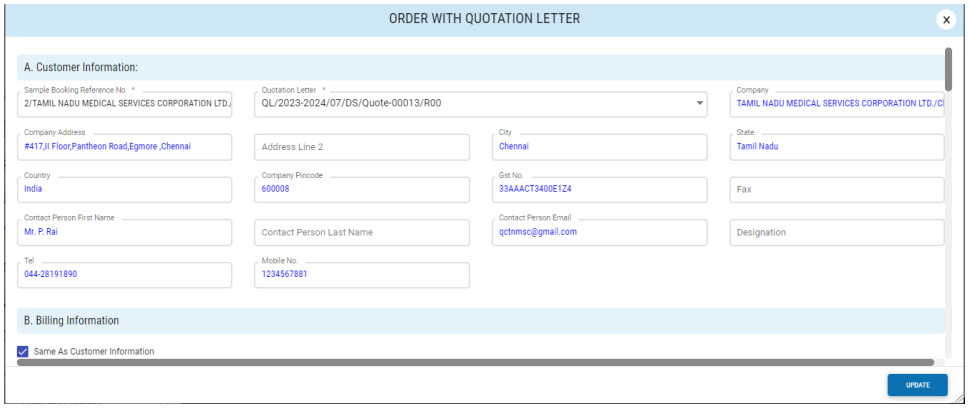

A) Customer Information- In this section the user can fill in all the details of the customer like Company, Contact Person Name, Company Address etc.
B) Billing Information- User can select checkbox if that user wants billing information will be Same as Customer Information otherwise user can fill details in this section.
C) Report Issuing Details- If user want this section details will be same as customer information, then select Same as Customer Information checkbox otherwise can detail.
D) Product & Tests Detail- Fill product details here.
E) Sample Details- Fill, sample details and add/select parameters here.

Fill in other sections also according to your requirements or with necessary details.

E-Labs

8.3 How To Book Order with Quotation Letter?

ii) Order With Quotation Letter- If user wants to book order through quotation letter, then click on Order with quotation letter option then select Add option. Then the following screen will appear.

A) Customer Information- Select sample booking reference no. According to that reference no. all quotation letter will auto populated in quotation letter dropdown. When you select quotation letter other details automatically filled.

B) Billing Information- Enter billing details here if you want to it will be same as customer details then select checkbox of Same as Customer Information.

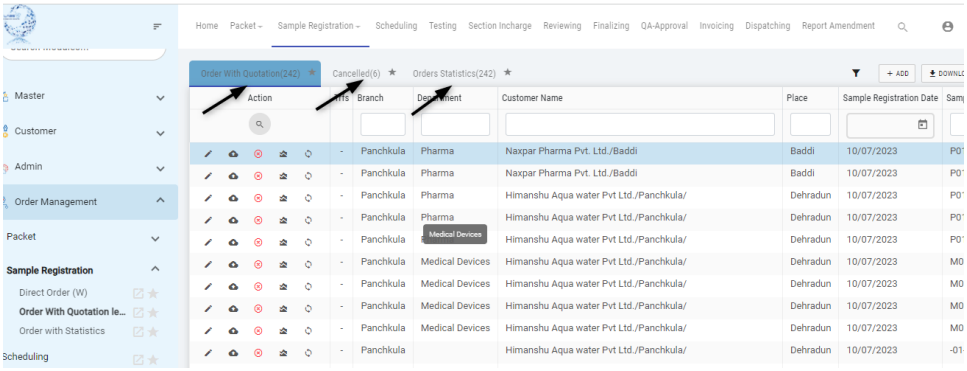

C) Report Issuing Details- Enter report issuing details here if you want to it will be same as customer details then select checkbox of Same as Customer Information.

D) Search Quotations- User can search and select quotation letter in this section. When user selects quotation letter then Quotation Sample Name will be auto populated.

E) Sample Details- Fill all necessary details of sample here then click on “+” icon to add these details. When user clicks on “+” Parameter List will be auto populated.

Fill in other sections also according to your requirements or with necessary details.

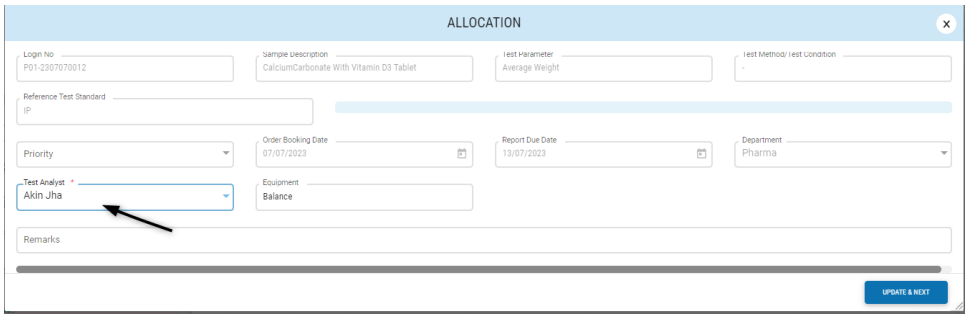

There are three tabs showing one is Order with quotation and the second is cancelled and third one is Orders Statistics.

- Order With Quotation - All orders with quotation letters are shown in this tab.
- Cancelled- Cancelled orders will be shown in this tab.
- Orders Statistics- User can see order on which stage through logs.

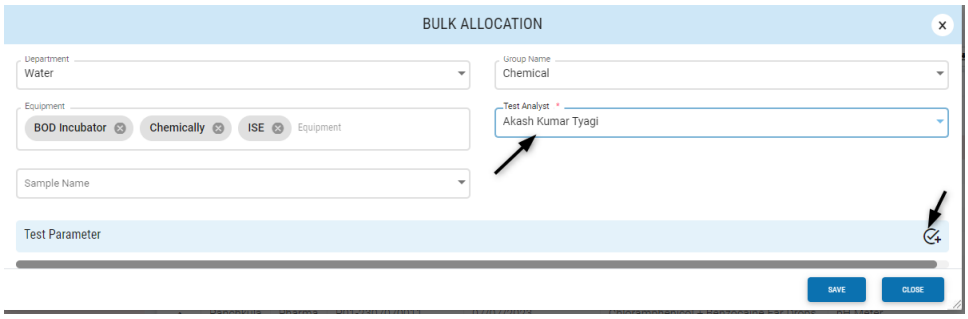

8.4 How Can I Allocate a Job to Analyst?

Stage 3- Now for job allocation, click on **Scheduling > Allocation**. The list of parameters is already shown here. Now click on update icon.

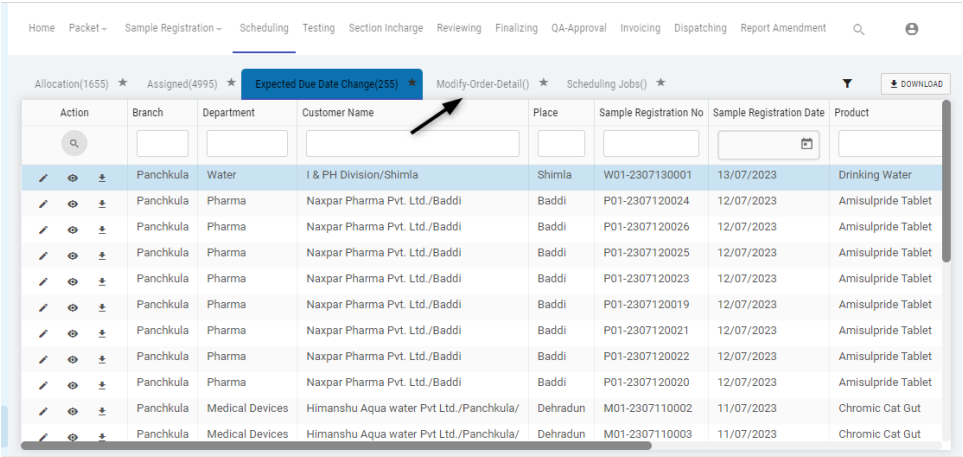

The above screen will appear. Here which parameter is going to be tested by its specialist the details can be filled here. Some of the details are already filled and the user must allocate a particular parameter to its specialist by selecting test analyst from its dropdown. Lastly, click on the Update button. Now this will be showing in dashboard of that specialist. This is the way users allocate parameters for its testing one by one to their analyst.

Users can also allocate bulk parameters. Click on **Scheduling > Allocation** and click on Add button. The following image will appear on your screen.

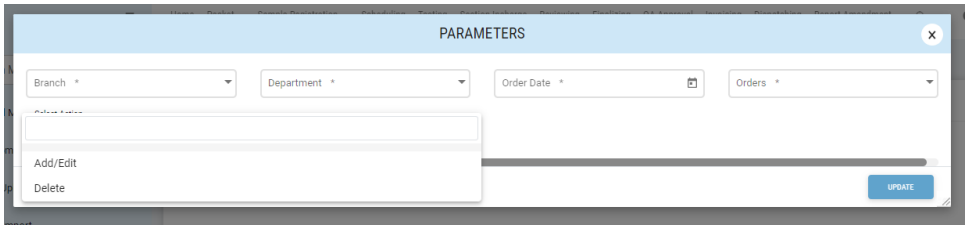

Fill all the necessary details here, like

- Department- Select the department which this belongs to.
- Group Name- Select the name of the group which this belongs to.
- Test Analyst- Select the test analyst which you want to allocate then all the equipment will be auto populated.
- Test Parameter- Click icon which is on the right of test parameter section. Parameters list will be showing, and the user can select checkboxes according to which parameters user want to allocate.

In this module, some of the tabs are showing i.e.:

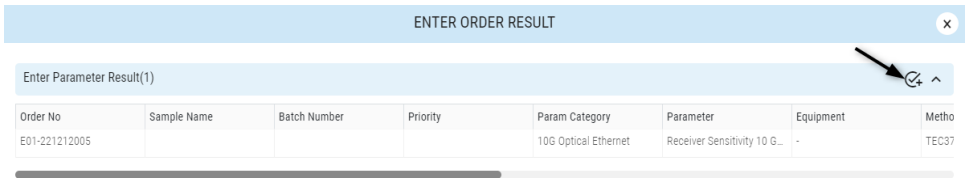

- Allocation- Allocating parameter for its testing to their analyst here.
- Assigned- User can see assigned list of parameters to their analysts.
- Expected due date change- If an order has two parameters one takes four days and other is taking six days to get a test done then expected due date will be showing six days from its order booking date.
- Modify Order Details- User can also change his order details or parameters in order by going to this tab then clicking on Add button. Then the following screenshot will appear on screen

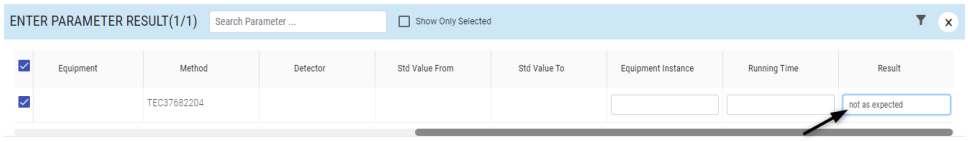

Fill all the necessary details here, in select action dropdown you can select add/edit or delete details according to your action the popup will be appear then user can fill necessary details in that popup according to the requirement.

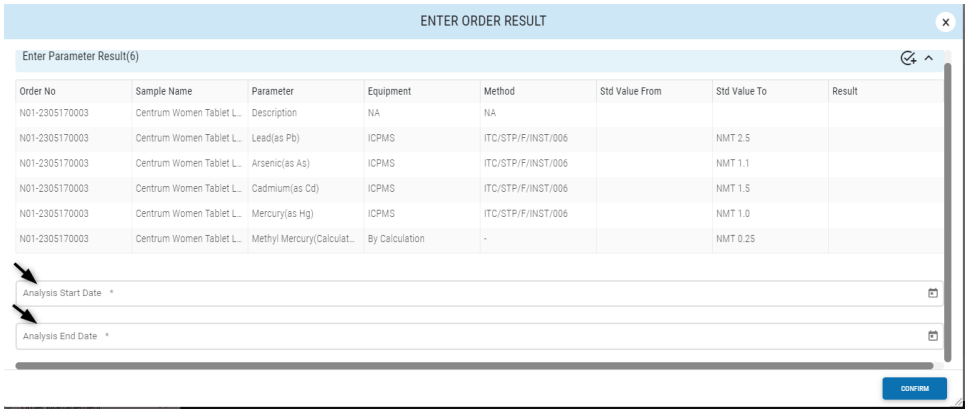

8.5 How Can I Allocate a Job to Tester?

Stage 4- After job allocation it is going for its testing to their specialist. Their specialist can confirm its testing by filling necessary details.

You can mention result by clicking on + icon. You can take idea from below image.

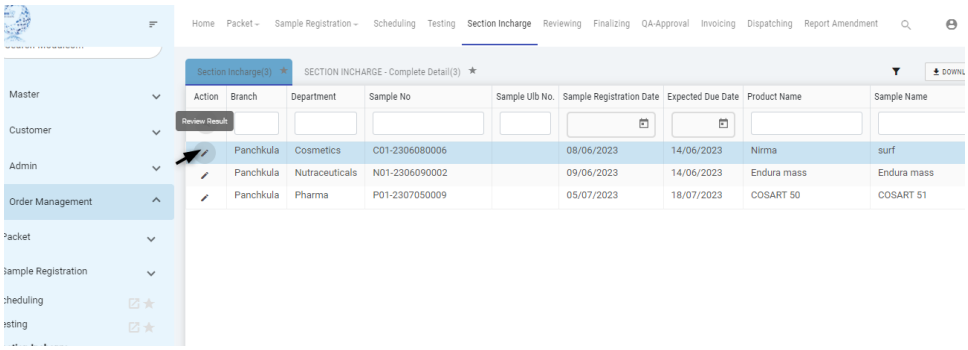

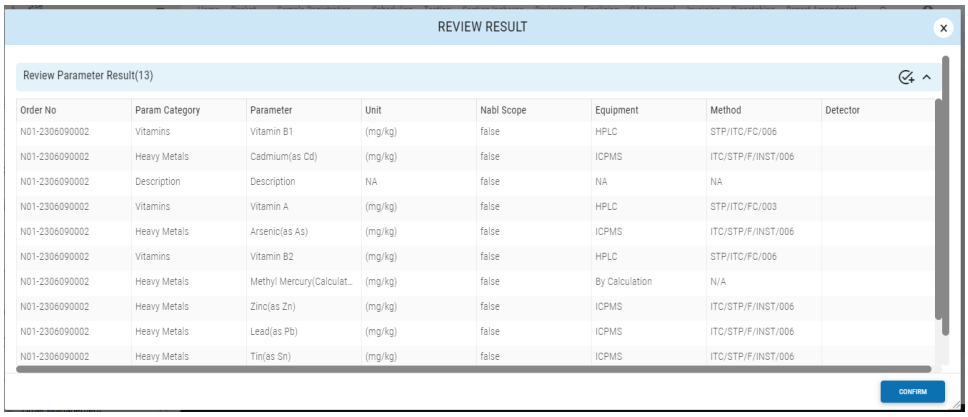

Start analysis and end analysis date will be selected by analyst then click on Confirm button.

9 What Are the Steps for Section In-Charge?

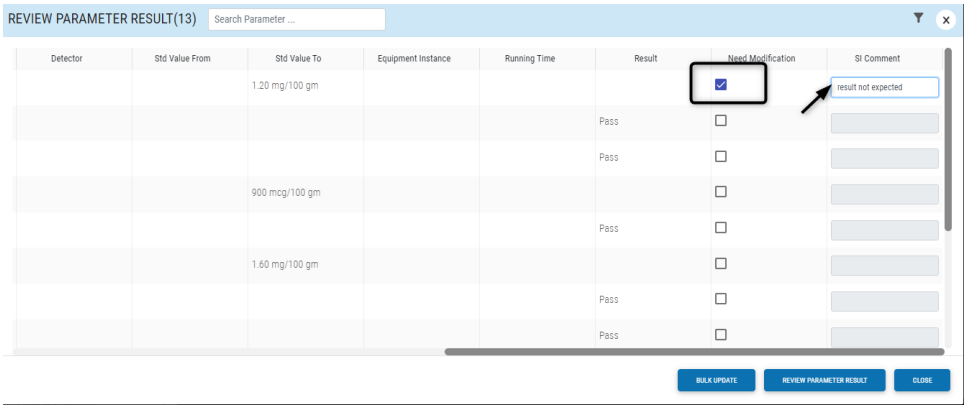

Stage 5- In this stage, the section in charge will check if the parameter's result is correct or incorrect. Also, the formula used in testing any parameter is correct or not. For this section in charge must click on the review result icon which is shown in the image below.

Then the following popup will appear on screen.

If the section in charge is not satisfied with the result, then the section in charge will have to click on + icon which is on the right of the review result parameter list.

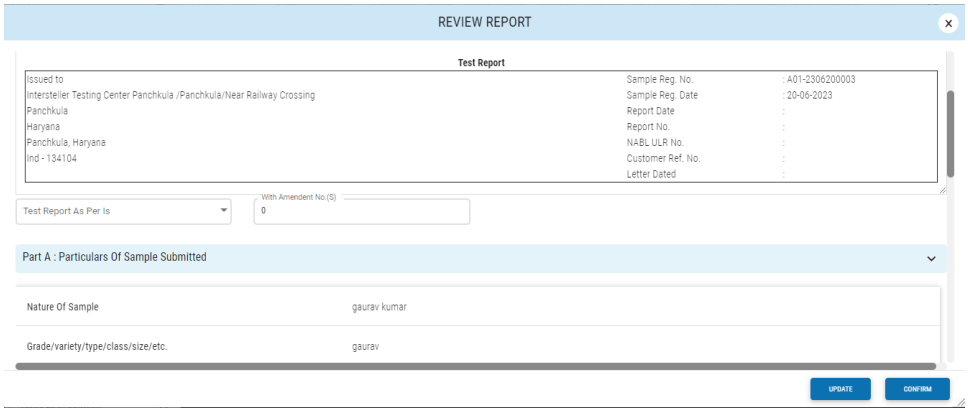

Click on checkbox and give a comment if the result is not correct then click on Confirm button. When the section in charge clicks on the Confirm button then it goes back to the same analyst who sent it after testing.

If the result is correct and the section in charge clicks on the Confirm button, then it will go to the reviewing stage.

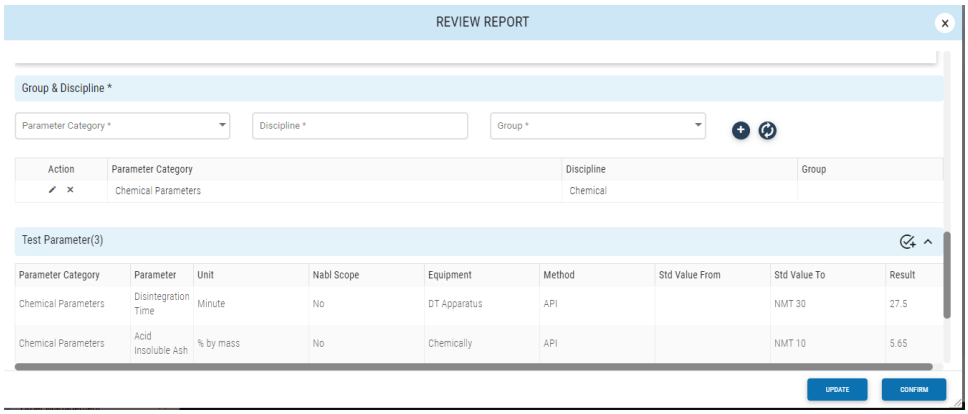

10 What Are the Steps for Reviewer?

Stage 6-

Now, on the reviewing stage reviewer can review it by clicking on review report icon then the following screen will appear.

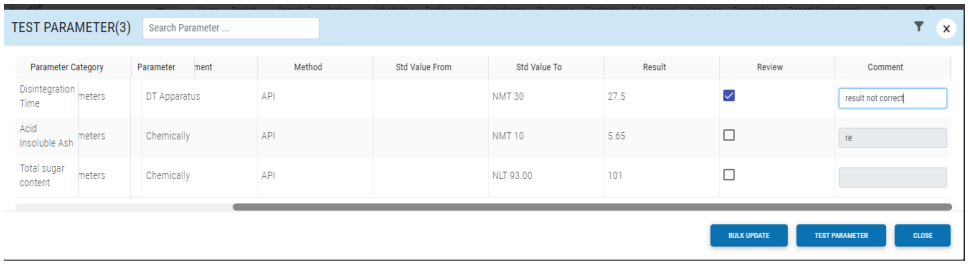

In the reviewing stage, we will display the complete order and the respective parameters selected were selected in that order. If any parameter which comes under that order is not being tested yet or the result was entered the order will not be visible on reviewing stage

Here the details are already filled which were entered by the order booker and the result section was entered by the test analyst. If the reviewer wants to change something, then the reviewer can edit these details. In the Note textbox, any abbreviations which can be used for parameters that can be given here and in the remarks dropdown reviewer can select any remarks according to its result.

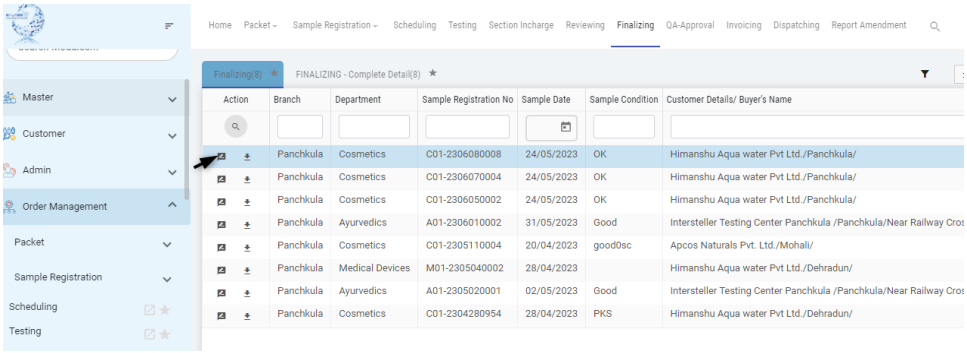

Also, if the reviewer is not satisfied with the result, then that user will also revert this. For this, click on + icon which shows the right of the test parameter then the following screen will appear.

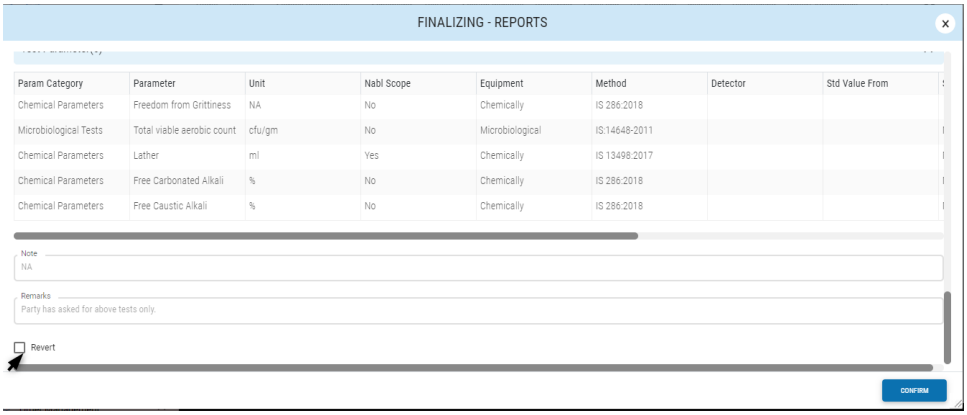

Now click on review checkbox and give a comment then Confirm by clicking on this button. If the reviewer reverts it will go to the section in charge by default but if the reviewer wants to revert it to testing stage, then it is configurable according to your requirement.

11 What Happens on The Finalizing Stage?

Stage 7- When the reviewer confirms this then this will go to the finalizing stage. Here finalizer has also complete view of report by clicking on review report icon.

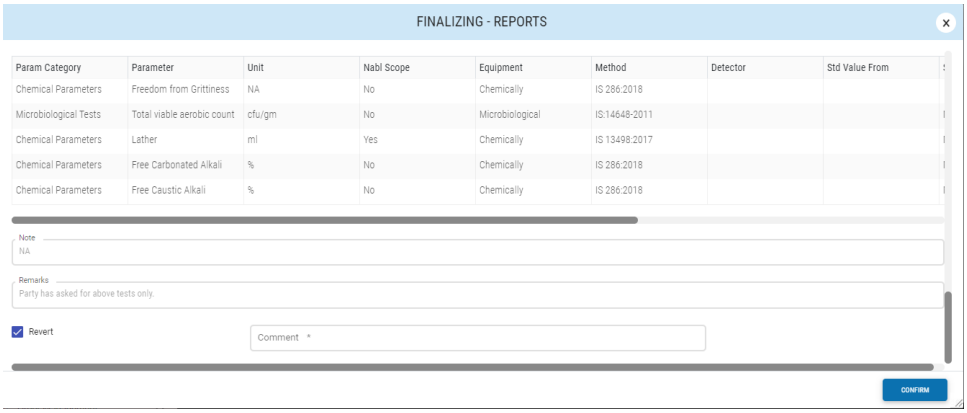

When the finalizer opens this report then the following screen will appear.

Here, if the finalizer is satisfied with this report, then can directly click on the Confirm button but at this stage, finalizer cannot edit anything. If not satisfied with this result, then click on revert checkbox when you can click on revert

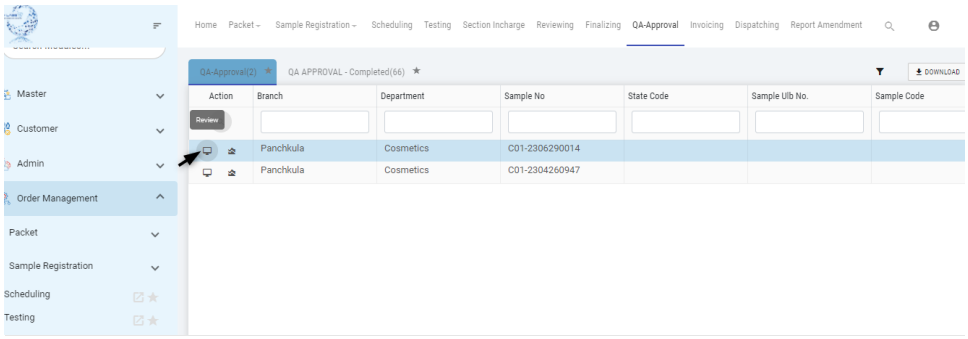

checkbox this will give you a comment option. You can take idea from the below screen.

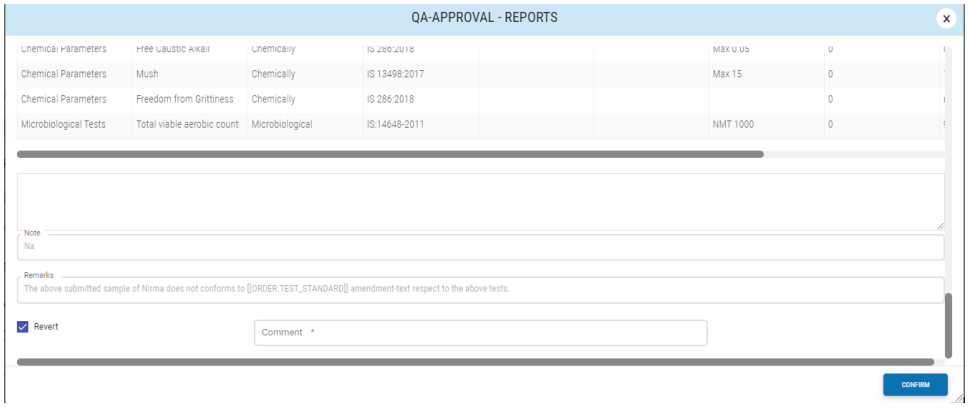

Select revert and give a comment here then click on Confirm button. Then it will revert one stage back i.e., Reviewing Stage. If the finalizer confirms then this will go to the next stage.

12 What Happens on The QA Approval Stage?

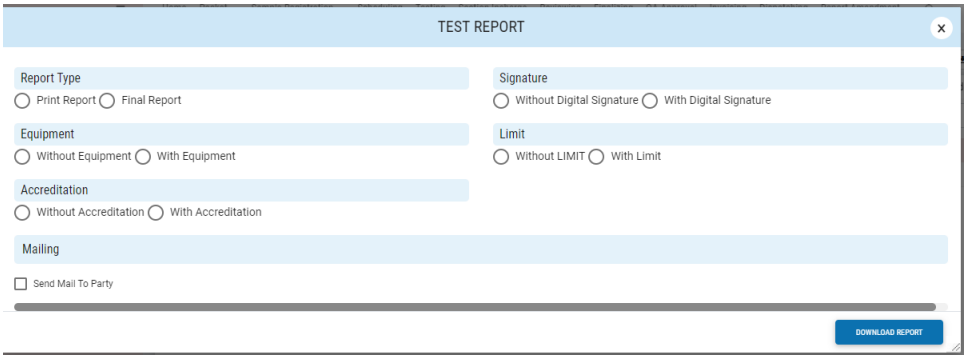

Stage 8- Now in QA Approval phase, QA can also review this report but there is no choice for QA to edit details. QA can only return or confirm this report.

When QA reviewing this report then the following screen will appear.

Here QA can check on revert checkbox and give a comment for this. When QA reverts to this then it will go back to step one i.e., Finalizing. Once QA confirms this, it will be ready for the invoicing phase. Also, QA can publish the report.

We have multiple options here for report printing.

Report Type

i) Print Report- By selecting this option, this will remove the header and footer of the company. This will print only reports without header and footer.
ii) Final Report- By selecting this option, this will print the report with the header and footer of the company.

Signature

i) Without Digital Signature- Through this choice, reports will be printed without the signature of the person in charge (reviewer, finalizer).
ii) With Digital Signature- Through this choice, reports will be printed with the digital signature of the person in charge (reviewer, finalizer).

Note:- Signature of reviewer/finalizer is completely optional. This is dependent on your choice. We can customize accordingly.

Equipment

i) Without Equipment- This will print a report with the instrument details which are used for testing. So, this will show the instrument detail also.
ii) With Equipment- This will print reports without instrument details which are used for testing. This will not show this.

Limit

i) Without Limit- This will print reports without showing required details.
ii) With Limit- This will print a report showing requirement details.

Accreditation

i) Without Accreditation- By selecting this choice, this will print a report by giving you parameters which are false for the scope according to the NABL guidelines.
ii) With Accreditation- By selecting this choice, this will show parameters on the first page which are true for the scope according to the NABL guidelines. Then the parameters which are false will be shown after the true parameters in the report.

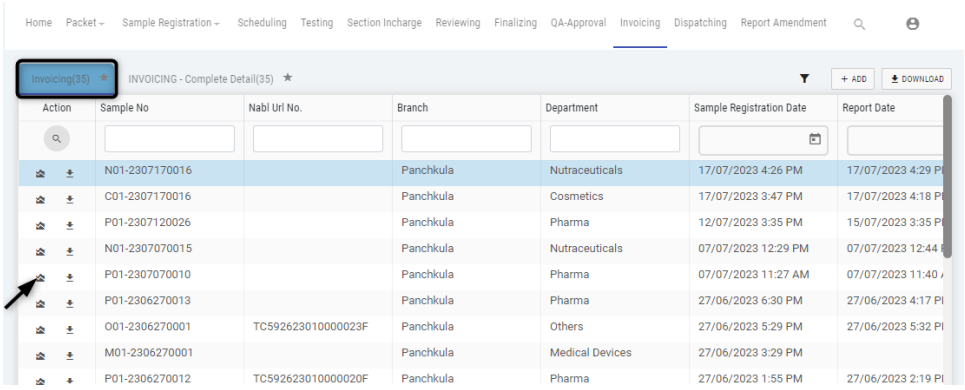

Mailing

Send Mail to Party- Select this checkbox if you want to send mail to the party of this order.

When QA confirms from this stage this will go to invoicing stage.

13 What Happens on The Invoicing Stage?

Stage 9- In this step you are on invoicing stage and this denotes your order is ready for generating invoice against the company specified in the invoice list also you can download the report. For this, click on the Add button and fill in all the necessary details and then save. Now this will go into another phase.

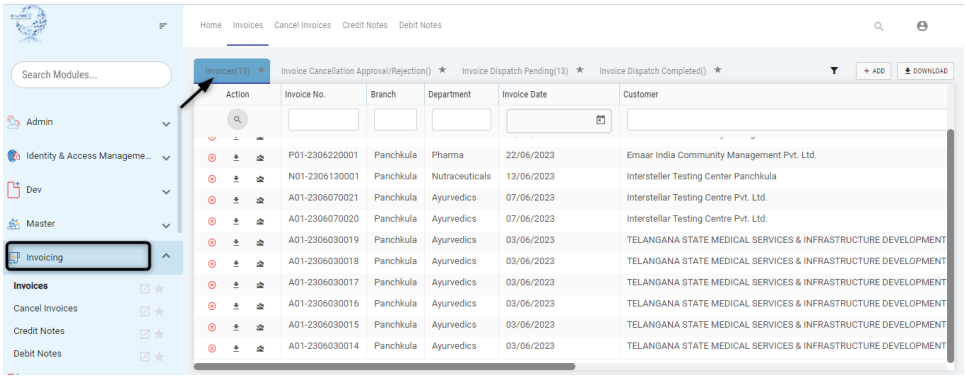

Click on download report icon to download the report as shows in the above image.

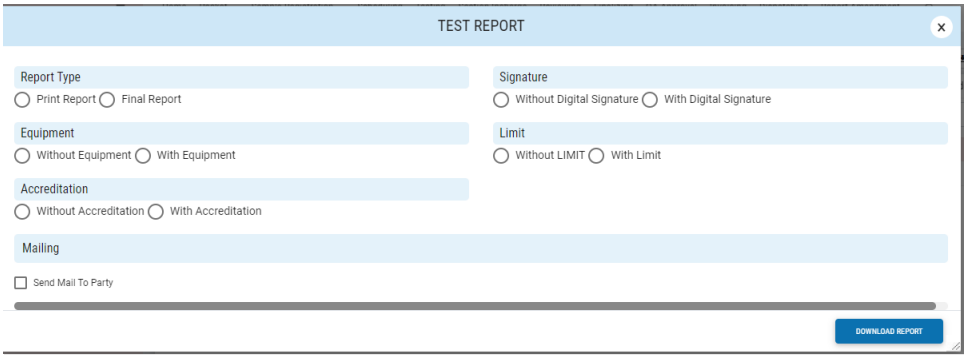

Note: - The user can use custom edits to make any corrections to their order before going ahead with dispatching. Once it gets to the dispatch stage, we cannot make any improvements to parameters or order. Therefore, the user cannot use the report change section while it is in the dispatching phase.

14 Where To Generate Invoice?

To generate invoices against the company we have to go to the invoicing module.

We have multiple options here for report printing.

Report Type

iii) Print Report- By selecting this option, this will remove the header and footer of the company. This will print only reports without header and footer.

iv) Final Report- By selecting this option, this will print the report with the header and footer of the company.

Signature

iii) Without Digital Signature- Through this choice, reports will be printed without the signature of the person in charge (reviewer, QA approver, finalizer).
iv) With Digital Signature- Through this choice, reports will be printed with the digital signature of the person in charge (reviewer, QA approver, finalizer).

Note:- Signature of reviewer/ QA approver/ finalizer is completely optional. This is dependent on your choice. We can customize accordingly.

Equipment

iii) Without Equipment- This will print a report with the instrument details which are used for testing. So, this will show the instrument detail also.
iv) With Equipment- This will print reports without instrument details which are used for testing. This will not show this.

Limit

iii) Without Limit- This will print reports without showing required details.
iv) With Limit- This will print a report showing requirement details.

Accreditation

iii) Without Accreditation- By selecting this choice, this will print a report by giving you parameters which are false for the scope according to the NABL guidelines.
iv) With Accreditation- By selecting this choice, this will show parameters on the first page which are true for the scope according to the NABL guidelines. Then the parameters which are false will be shown after the true parameters in the report.

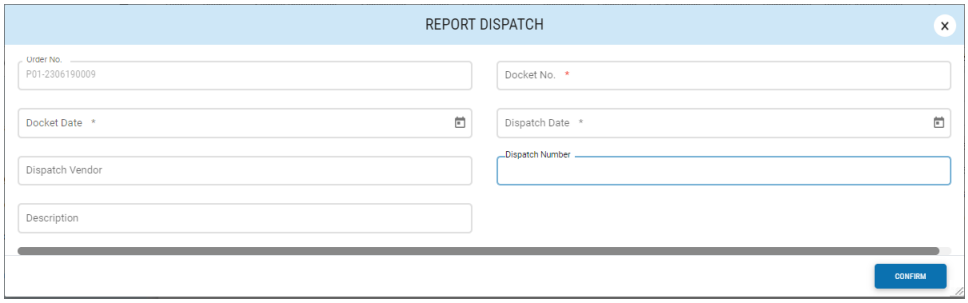

Mailing

Send Mail to Party- Select this checkbox if you want to send mail to the party of this order.

Note:- When you are downloading report at this stage this will also show the report in which NABL, User and Report number will be mentioned or not. This will not show on the QA stage.

15 What Are the Steps for Dispatching Stage?

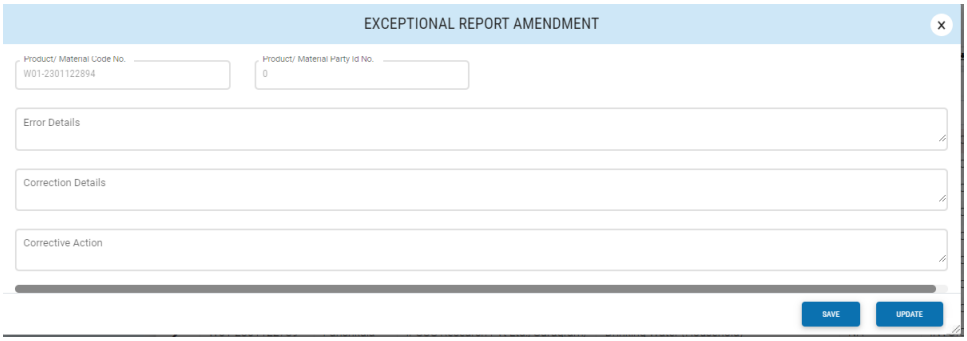

Stage 10- Here the order is ready for dispatching. Click on the dispatch icon then the following screen will appear.

Here, the order number is auto populated in this, and the user must fill in all the other necessary details then click on the Confirm button.

16 When Can I Use Report Amendment Option?

Step 11- We only need a Report Amendment tab when the order is in invoice stage and a customer says there is an error with the result or the order so we will use this choice to correct that error i.e., Report Amendment. Click on the update icon in the Report Amendment section. This will open the following screen.

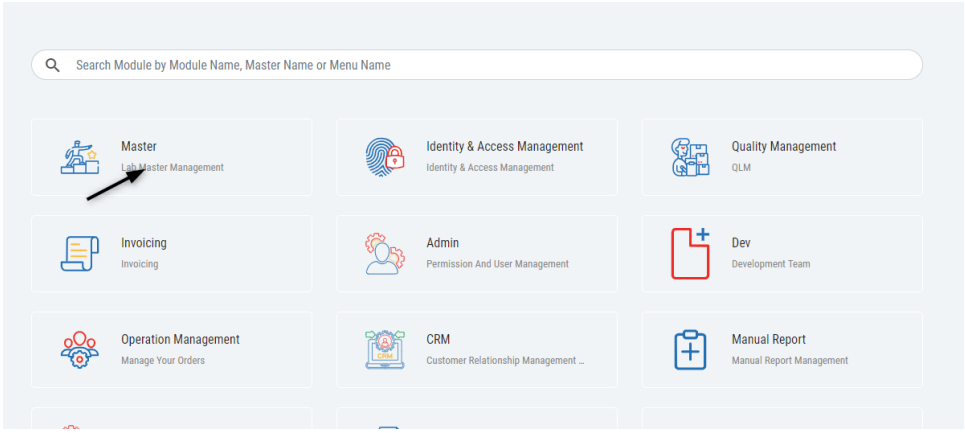

Error information and correction information will be stored here for correction. When the user clicks the save button, after the correction made for the order returns to the reviewing step, the user will select the “Amendment Required” dropdown and then update it.

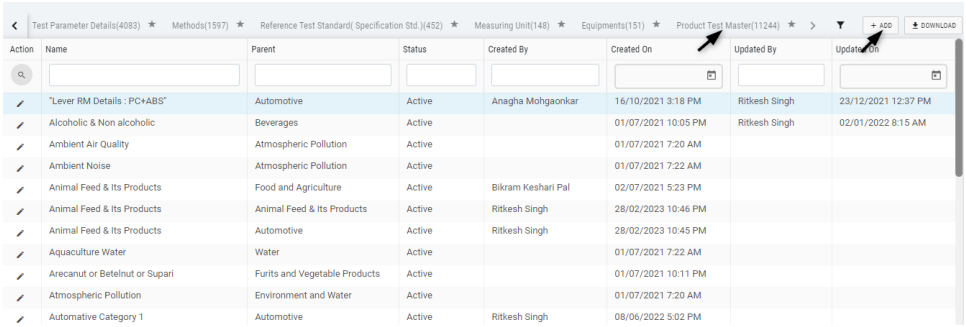

So, this is how we can deal with any sequence from ten steps.

Note:- User can use amendment option when the order is in invoice stage. When it is in dispatching stage you can’t use amendment option. Once you done amendment it will return to the reviewing stage.

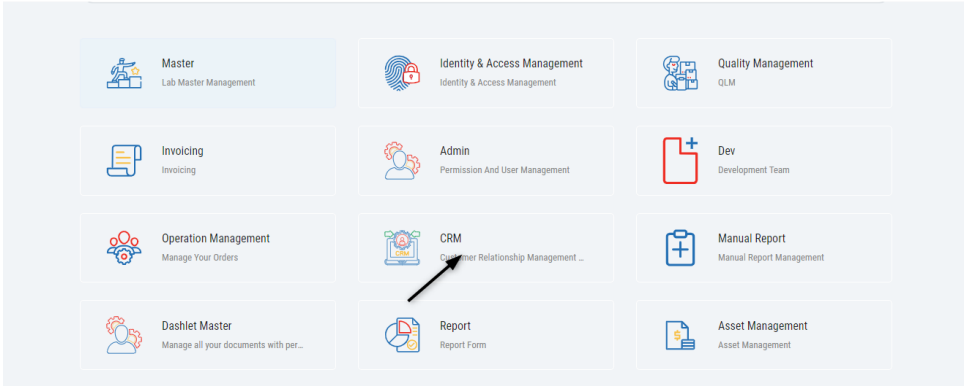

16.1 How To Book Order with TDS (Test Data Sheet)?

For booking with TDS follow same steps. Create Product Master then go to CRM. For Product Master you can follow same steps as mentioned in the Product Master module so you can refer this module.

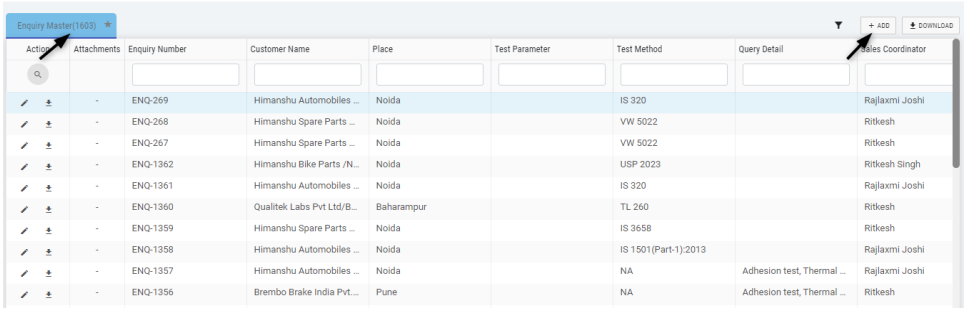

Product Master

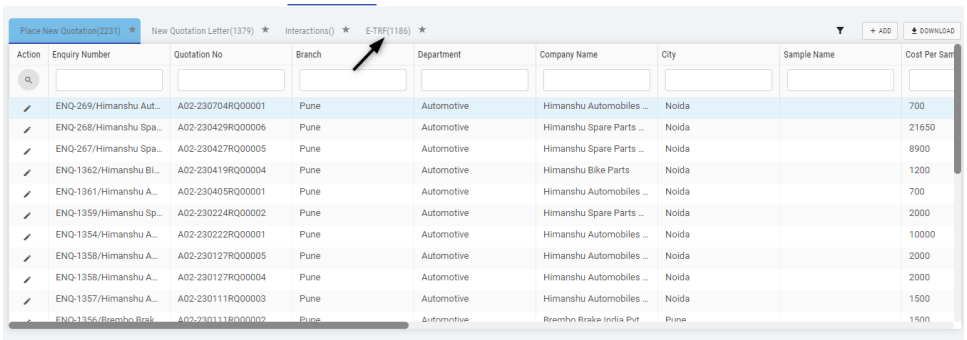

CRM

16.2 How To Generate E-TRF?

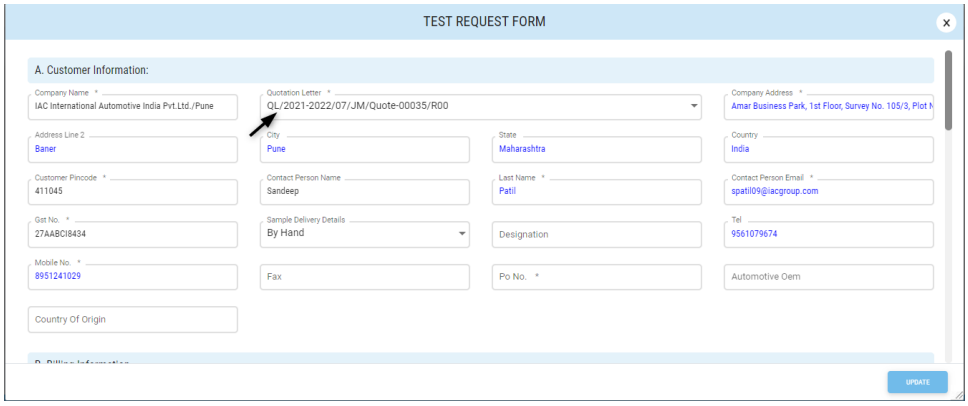

When you complete steps for creating enquiry that the customer wants testing for particular product against specific parameter. These are the same steps as mentioned in the CRM module. You can refer CRM module.

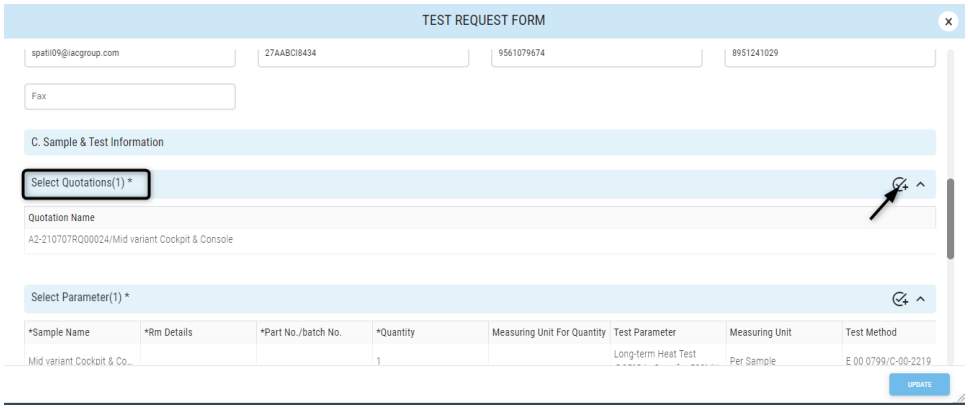

Once you create quotation against enquiry and after customer agreed on quotation you can create E-TRF (Electronic Test Request Form). Here Place New Quotation and New Quotation Letter are same which is already explained in CRM module.

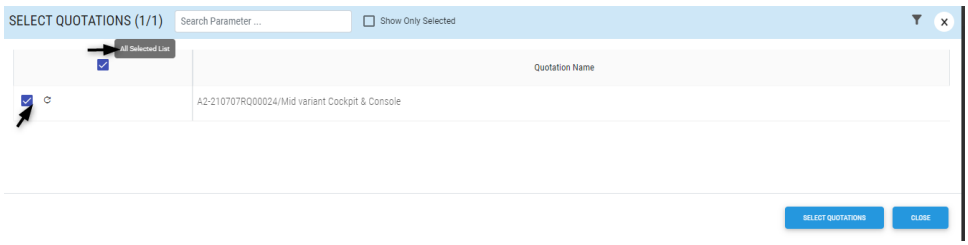

To create E-TRF go to this tab and click on Add button. A popup will appear

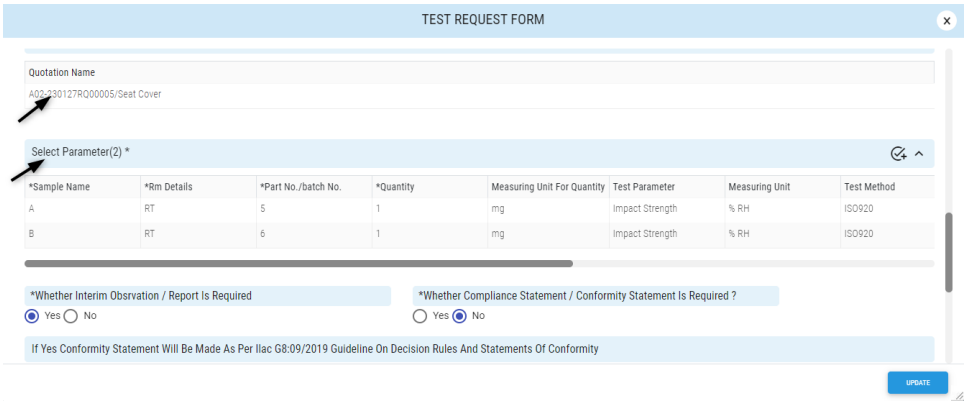

In Customer Information section, select company name then the information regarding this customer will auto populated. In quotation letter drop down select quotation against this customer. Once you select the quotation you can see all the club quotations against this selected quotation. You can take idea from below image.

For all the club quotations go to Select Quotation section which comes under Sample & Test Information. Click on the '+' icon which is highlighted in the above image. After clicking on this icon following popup will appear

Here all the club quotation will be visible to you and you can select according to your requirement. Once you select the quotation all the parameters against this quotation will auto populated in select parameter section.

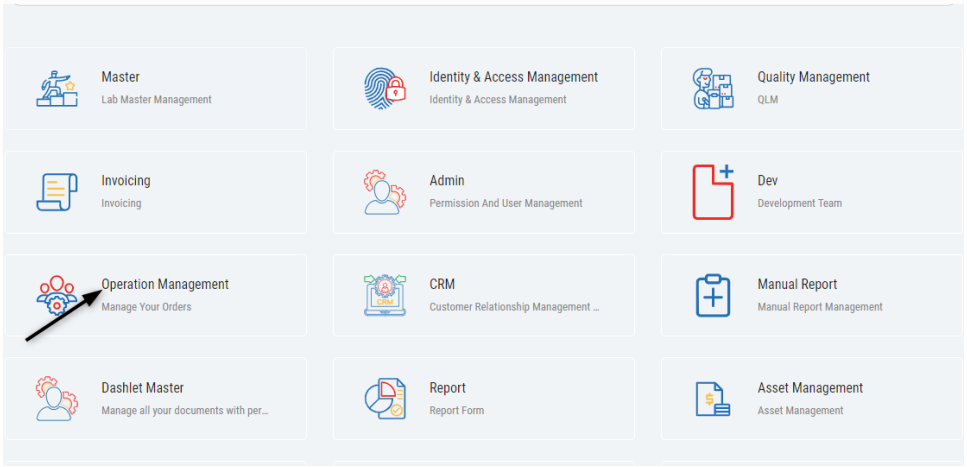

You can see in the above image also you can select the parameters according to your requirement by clicking on the '+' icon. A popup will appear and then you can select accordingly.

Note:- In order booking with TDS, there will be an order book against each of the parameters selected by you in E-TRF form.

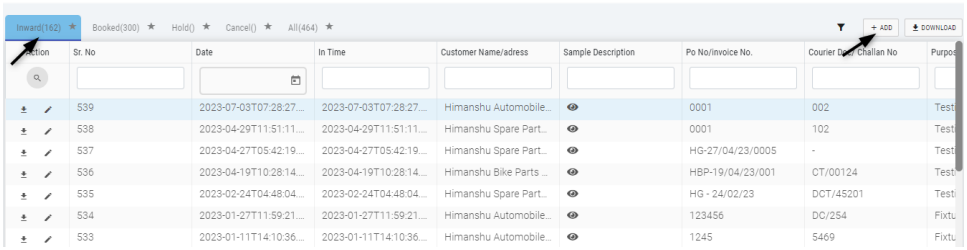

16.3 Order Booking With TDS?

Now, for order booking go to Operation Management module

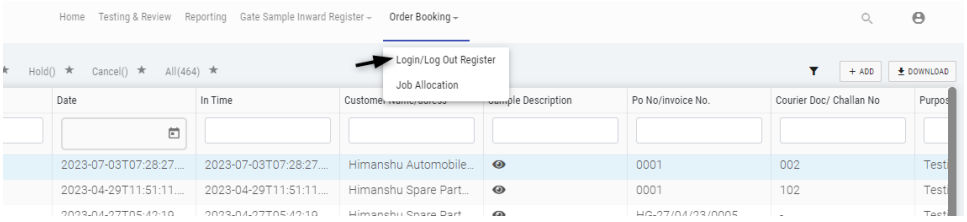

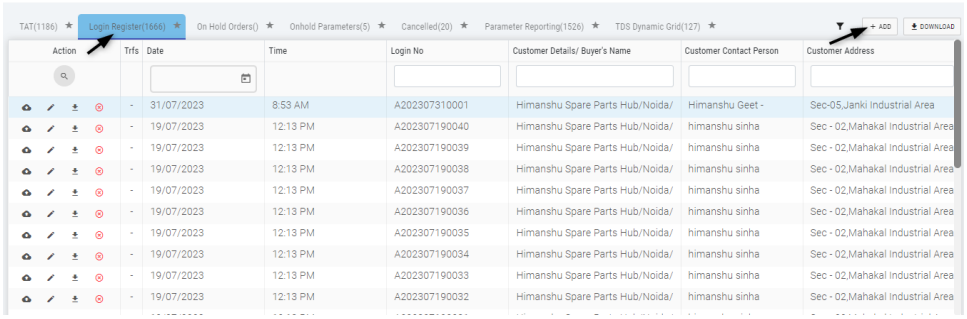

Follow the same steps as mentioned in the Order Management module.

Once you entered the details of received sample in Inward menu same like as details entered in Packet menu which we have already explained in Product Master module.

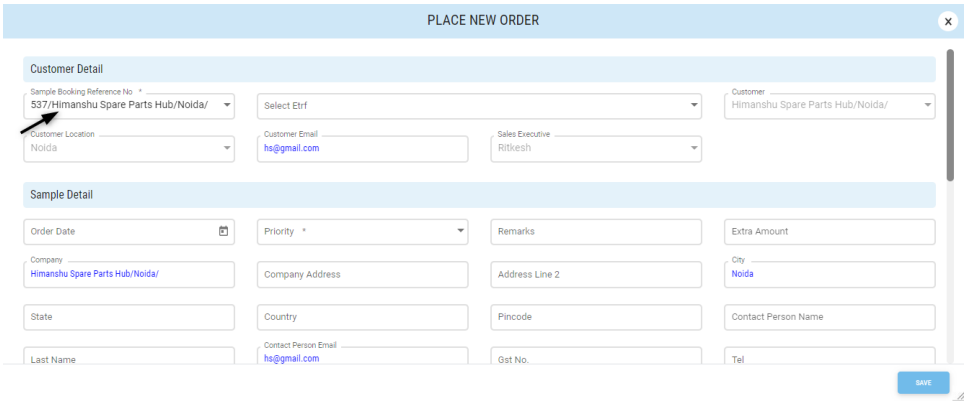

Now, for order booking click on Login/Log Out Register then click on Login Register tab which is shown in the below image.

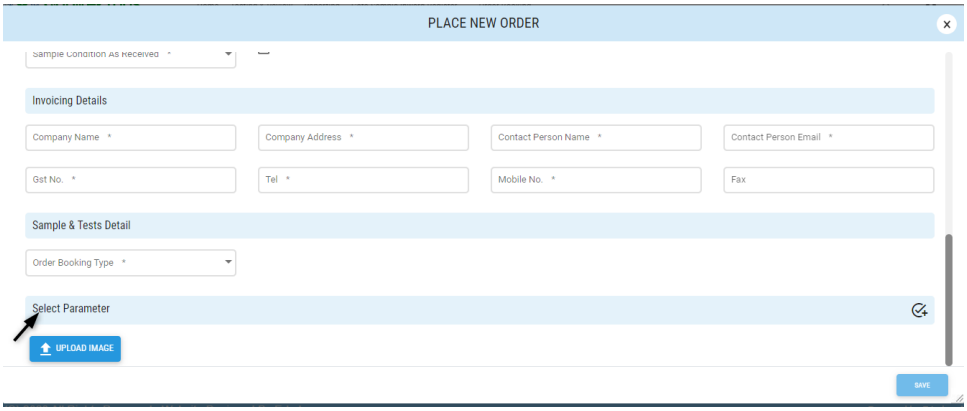

As the above picture shows click on Add button so that you can book the order. After clicking on this you can see following popup

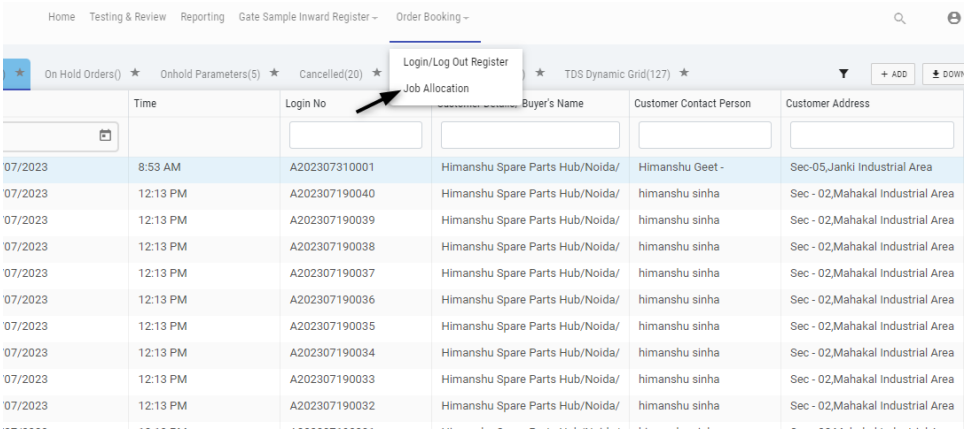

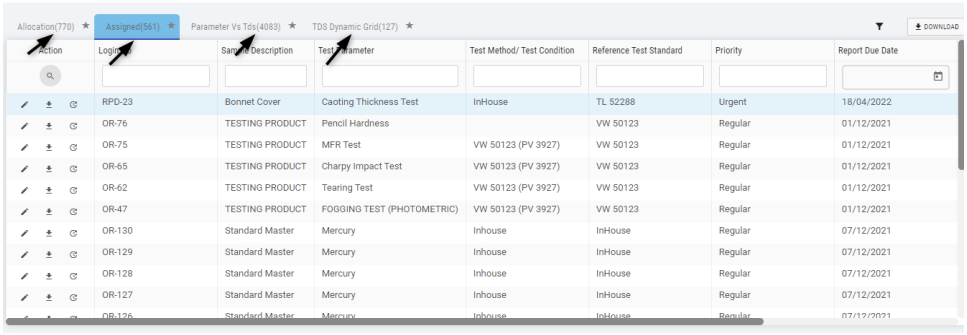

Once you select the sample from the dropdown the details will auto populated of the customer. Now you select E-TRF, only those E-TRF against which the order has not been booked will appear. Once you select E-TRF in dropdown all parameters against selected E-TRF will auto populated in Select Parameters section in the grid.

Once you click on save button as many orders will be generated as the number of parameters selected. It means if the total parameters are twenty then for each single parameter twenty orders will be generated.

Next step is for the Job Allocation, go to Job Allocation menu.

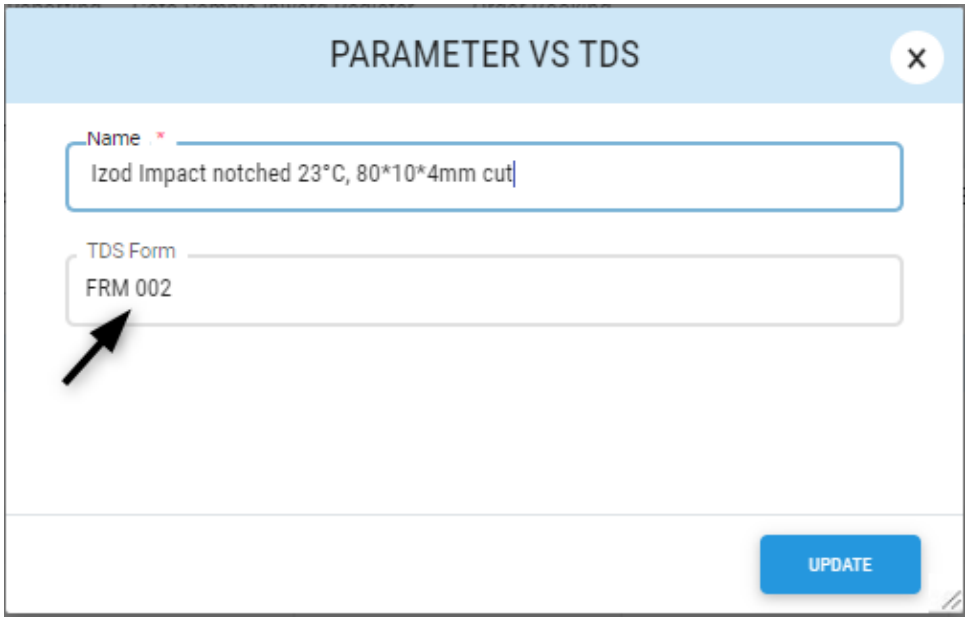

Under this menu, you can see four different sub menus. Allocation and Assigned are the same which you can refer from the Order Process Management module. TDS option starts from the Parameter v/s TDS submenu.

Note:- For each parameter we have already created forms and for every parameter there is a different form. That forms will be known as TDS (Test Data Sheet)

16.4 How To Use TDS Option For Order Booking?

Go to Parameter v/s TDS submenu. Here I am taking the example of “Izod Impact Strength” test parameter. Click on edit icon below popup will appear on screen

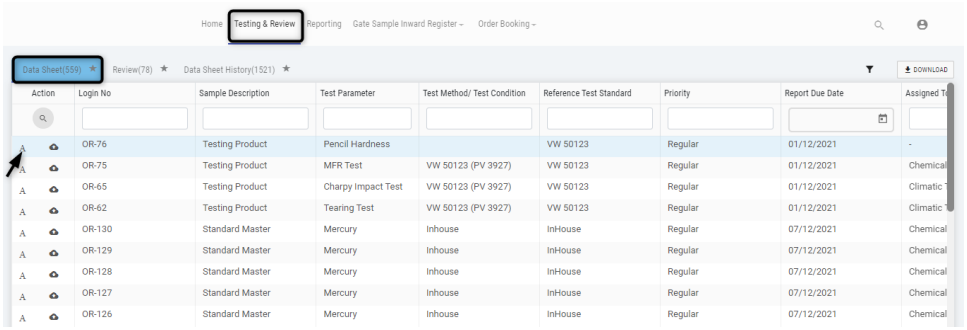

From the above image, you can see parameter name and fill TDS form against this parameter. This is only one time work for every parameter. Once you saved this you don't have need to set this again and again

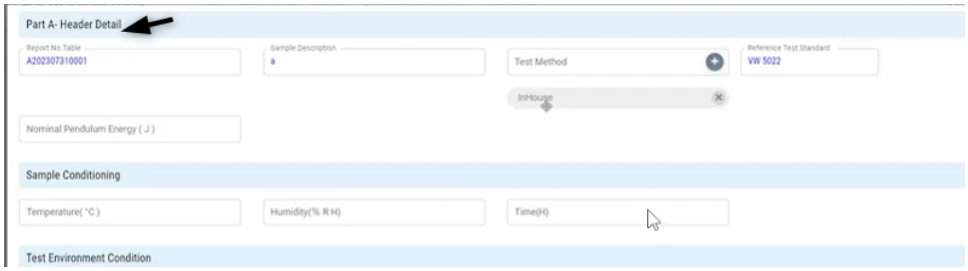

Note:- If no TDS form is selected with any parameter, then common TDS form will be automatically mapped from it.

16.5 Testing Stage?

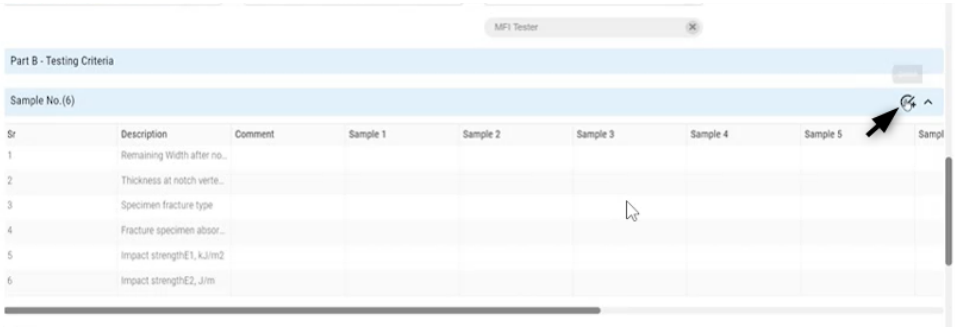

Once the order booking is done it will and Review stage under Data Sheet submenu.

When the tester clicks on the above highlighted icon a popup will appear and some of the details will auto populated only then if the parameter is not bind with common TDS and some necessary details will have to fill by tester.

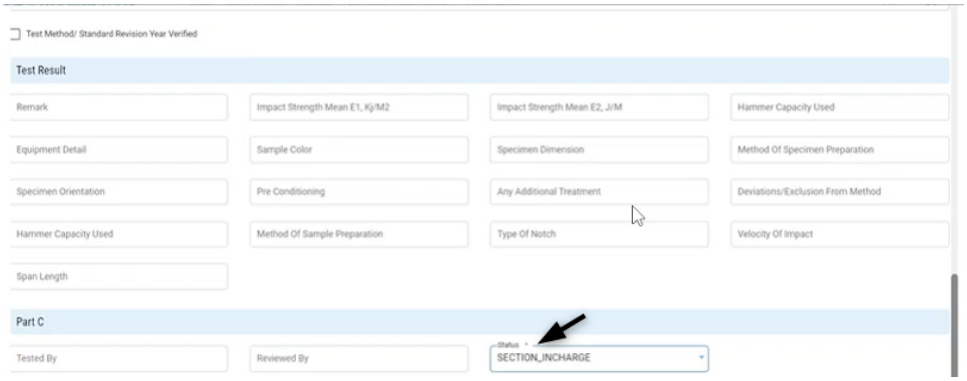

In the above image you can see auto populated information.

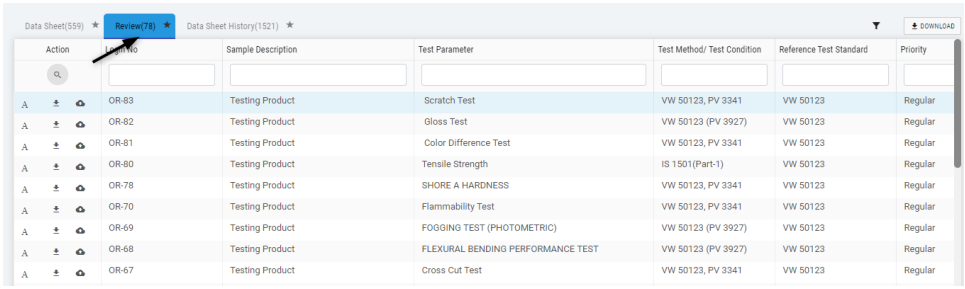

In Testing Criteria section, click on highlighted icon then the below image will appear.

In the above image tester will have to fill data for the required parameters and then calculation will performed and show result in rest of the parameters.

Once you fill all the necessary details set the status by selecting section in charge from the status dropdown so that it can go to the next stage that is section in charge. It will now go to the section in charge in review stage.

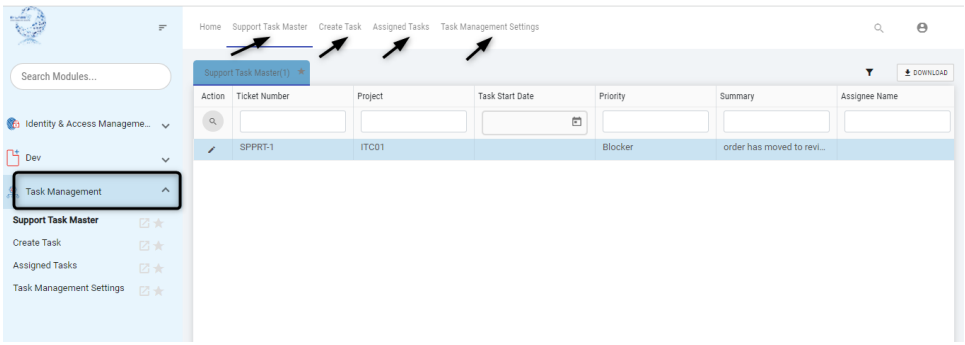

Rest of the steps are same from the Order Process Management only the difference is user can set the status from the dropdown after reviewing it. From the status dropdown user could be select one stage back or one stage forward.

After this, it will go to the Reporting, Final Report, QA Approval, Invoicing and Dispatch. All these steps are same you can refer it from Order Process Management module.

E-Labs

17 Task Management?

Users can view the record of assigned tasks online whether they are created by you or assigned by a third party. For this first access the Task Management module.

Here we have four menus: -

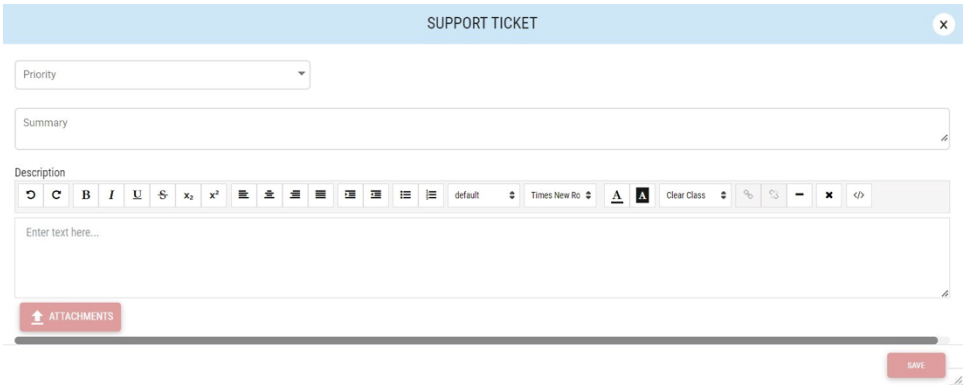

i) Support Task Master
ii) Create Task
iii) Assigned Tasks
iv) Task management settings.

17.1 Support Task Master?

If any customer faces any problems or bugs in their software, they can raise a ticket for this. Our software has two separate ways to access the support master.

(i) Go to Task Management and then click Support Task Master
(ii) Click on the profile icon and the sidebar appears on the right side of the screen. From that sidebar, click the Raise/View Ticket option.

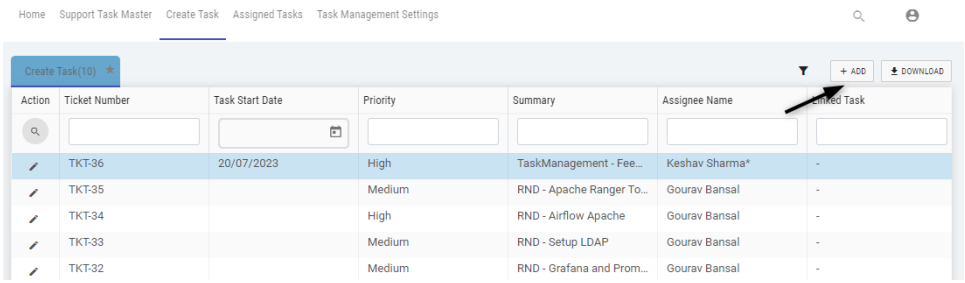

Click on the Add button and a popup appears on the screen.

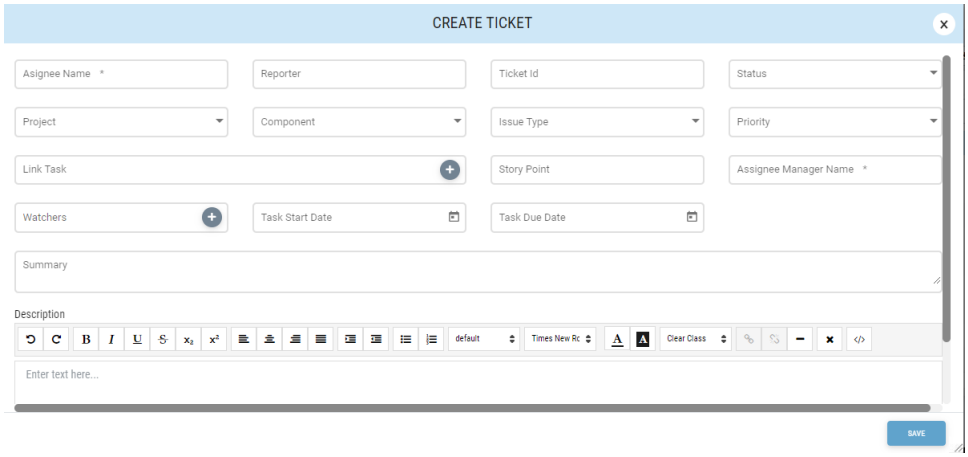

Then, you can fill in all the required information and then save it. So, the support task master provides you with a support system for your software.

17.2 Create Task?

If you want to create a task for yourself or for any of your team members, you can use the create task choice. Once you come to this page click on the Add button for creating task.

Once you click the Add button, the image screen shown below appears on screen.

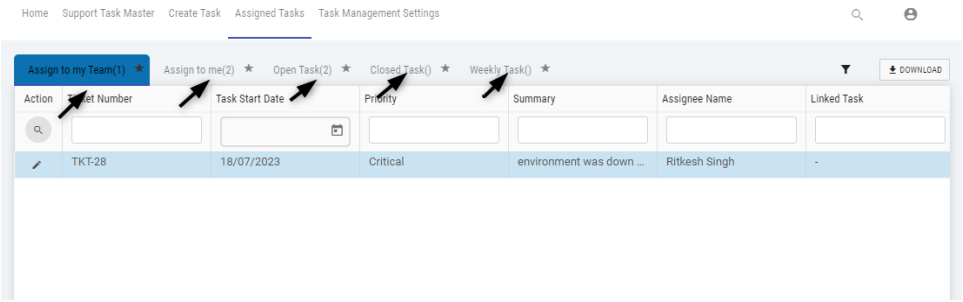

Here are the key details to fill in. We will explain some of them to you.

- Assignee Name- To whom you want to assign the work. Once you select the assignee's name, the reporting manager with that assignee will auto populate.
- Project- Mention here the project for which you are creating this task.
- Component- Mention here which part the user should work on for this task.
- Issue type- Is it a bug, story, or task, select here.
- Task start date- Select the date when you start work on task.
- Task due date- Select date when you will complete task.
- Status- Select status according to the task stage.
- Summary- Give a summary for your task.
- Description- Give in detail an explanation of task in the description field.

Once you save the task assignee and reporting manager will receive a mail for this saved task.

17.3 Assigned Tasks?

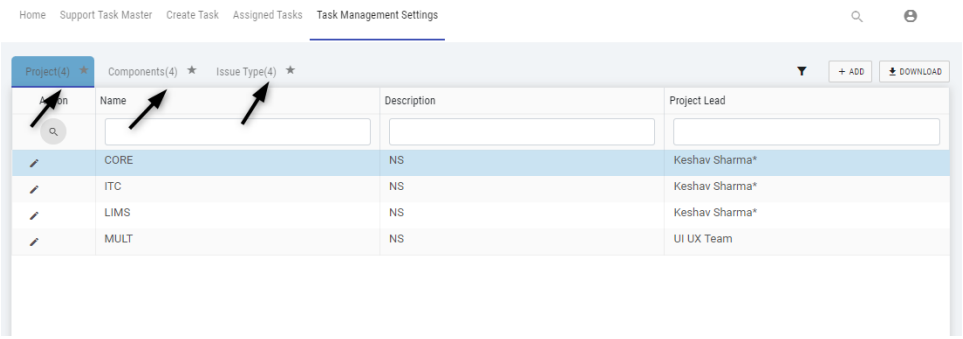

When you click on the assigned tasks tab you will see the image below.

i) Assign to my team- If you are reporting manager of your assignee then you can see all the assigned tasks of your assignee in this tab. Also, you will see status of all the tasks.
ii) Assign to me- if you want to see your assigned tasks only then you can see them here. There is also provision to update the assigned tasks from this.
iii) Open task- All tasks can be found here except with the status of done. If you update the task from this tab, then the reporting manager and assignee will receive a mail.
iv) Closed task- Only those tasks with the status of done will be visible here.

17.4 Task Management Settings?

If the developer team wants to develop a New Project or Component, they can use task management settings.

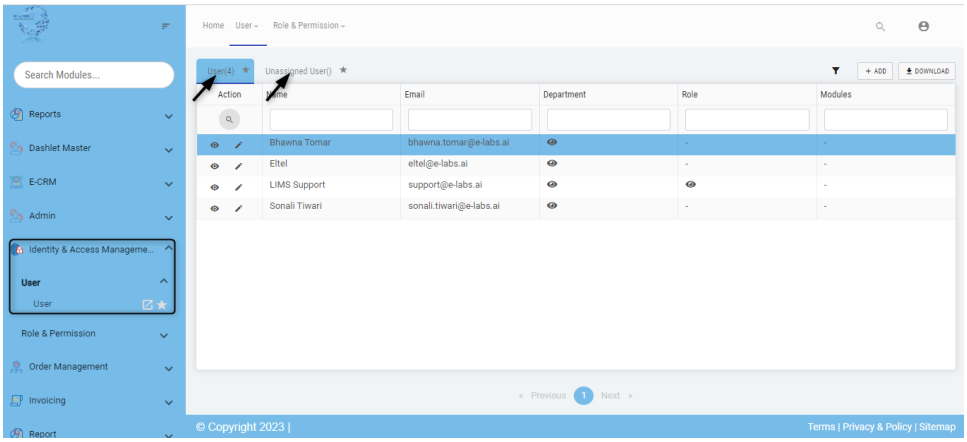

Project- Through this tab you can create any new project here.

Components- If you want to create any new part, you can do it by adding information in the Component Tab.

Issue Type- The user can mention the issue's type in this tab.

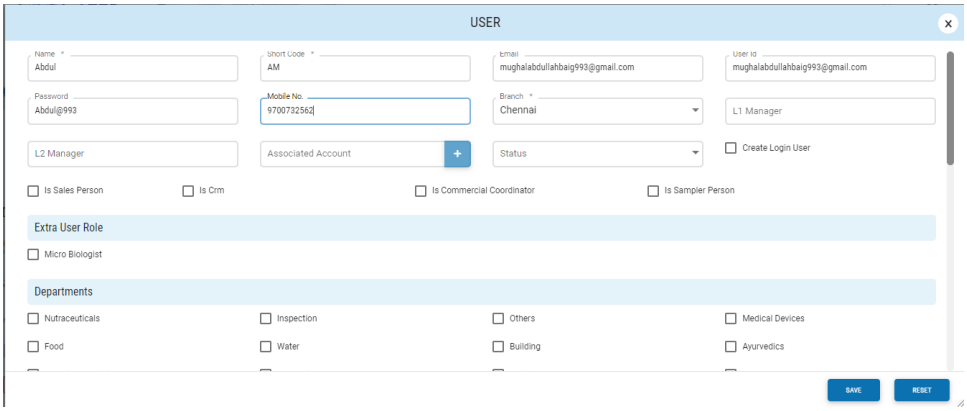

18 Identity And Access Management (IAM)?

You can use IAM module for storing the details of user . When you click on User tab under Identity Access & Management, following screen will appear.

Here are two menus under user tab one is user and second one is unassigned user.

User – This will contain all information regarding user. When any user wants to use this software his/her detail must be stored in User template tab. Only when you entered your details in signup and once you signup then these details will come under the user template tab. Now your admin will come here and edit your details

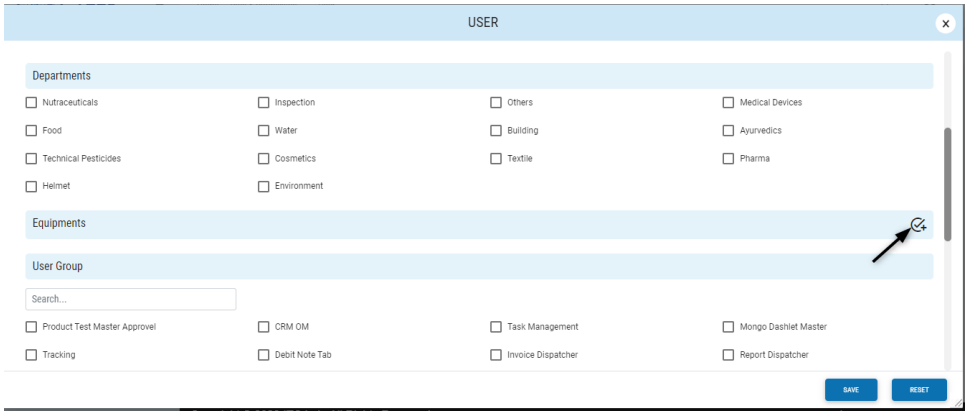

- Now admin will have to fill all the necessary details like:
- Name- Name of the user.
- Short Code- We can create short code for any user through which we can know about the user’s activity.
- Email- Registered email of the user.
- User ID- Registered email and user id will be same.
- Branch- In which branch does this user work select accordingly.
- L1 Manager- User's reporting manager will be mentioned here.
- L2 Manager- If there are two reporting managers of the same user, we can mention it here.
- Associated Account- Mention companies here for which user works.

There are some checkboxes also in which few of them I'll explain below-

- Is Sales Person- If the user belongs to sales profile, then check this checkbox.
- Is Commercial Coordinator- If the user belongs to commercial coordinator profile, then check this checkbox.
- Is Sampler Person- If the user belongs to sampler person profile, then check this checkbox.

Extra User Role:

If the user belongs to some other role, you can check the checkbox accordingly.

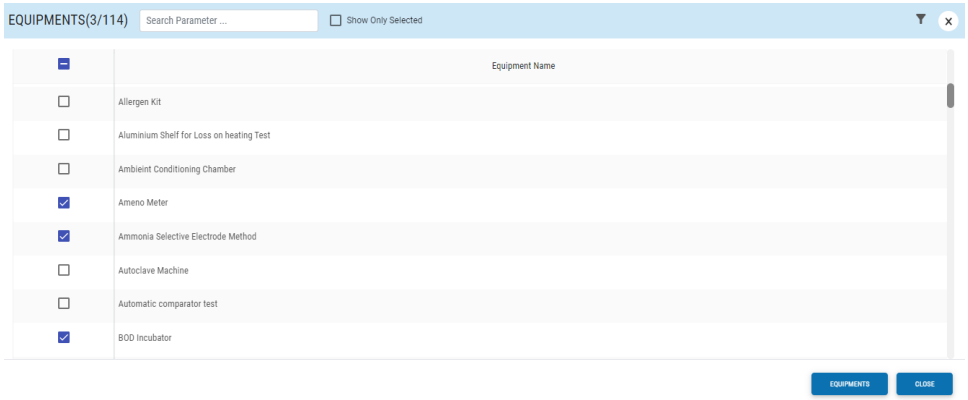

Departments:

In this section, user works for which department that will be checked here according to the checkboxes of different departments.

Equipments:

In this section, if user is a test analyst then click on tick icon which is on the right side of the equipment section as shown in the above picture.

Once you clicked, the list of equipments must be appear on your screen. Now the equipments on which it works can be selected here.

User Group:

In this section, we are giving permissions to that user basis on the profile of the user. Just like if the user is working for order review and dispatch then we can select order review and order dispatch.

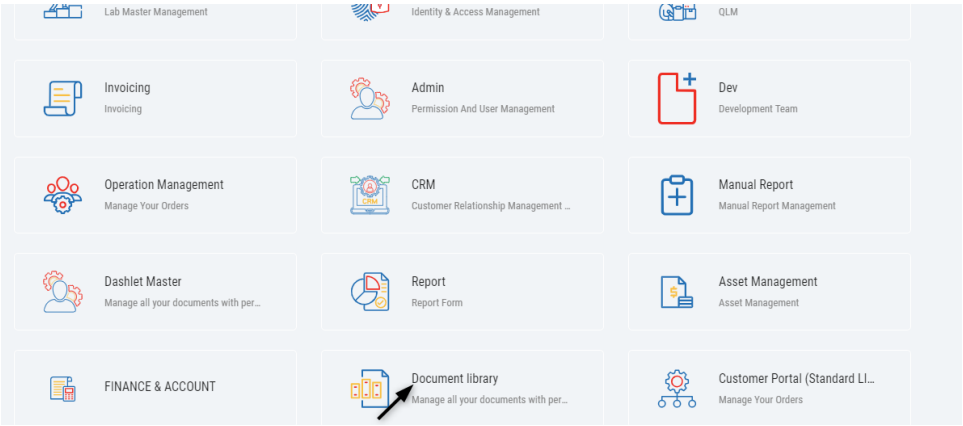

Signature:

If we need the signature of user then you can upload it in this section.

Unassigned user – This will contain all information regarding unassigned user means if we have the company with two or three branches and the user is not allocate to any branch so the manager can only edit details to allocate the user with ref code only then there is a need of unassigned user tab.

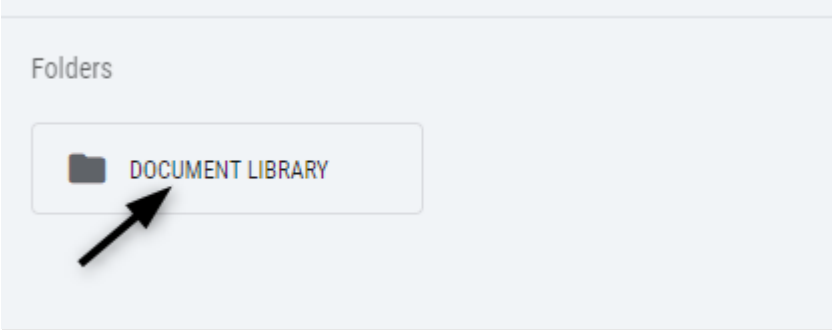

19 Document Library?

Document library is like cloud storage where you can store, upload and download your documents and files. For using this, go to document library which is shown as below image.

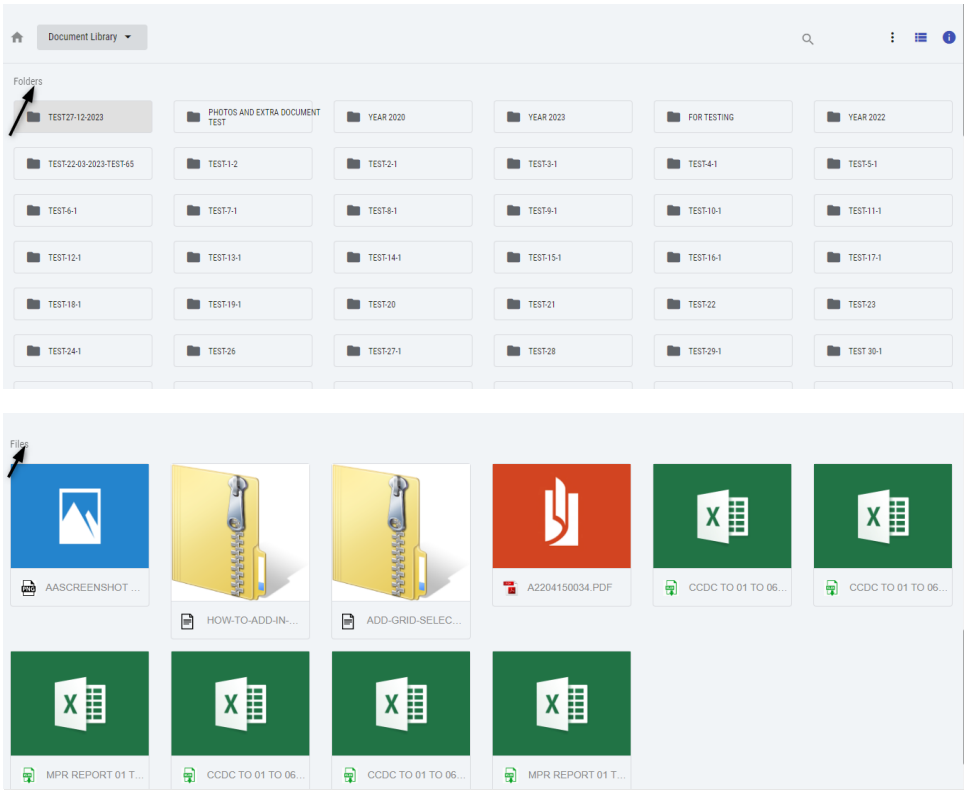

19.1 How To Use Document Library?

After this document library parent folder will appear. Click on this parent folder.

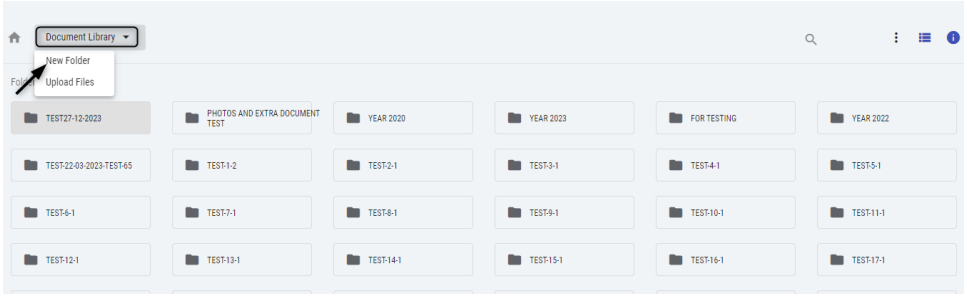

Now you will see different files and folders which are already uploaded here.

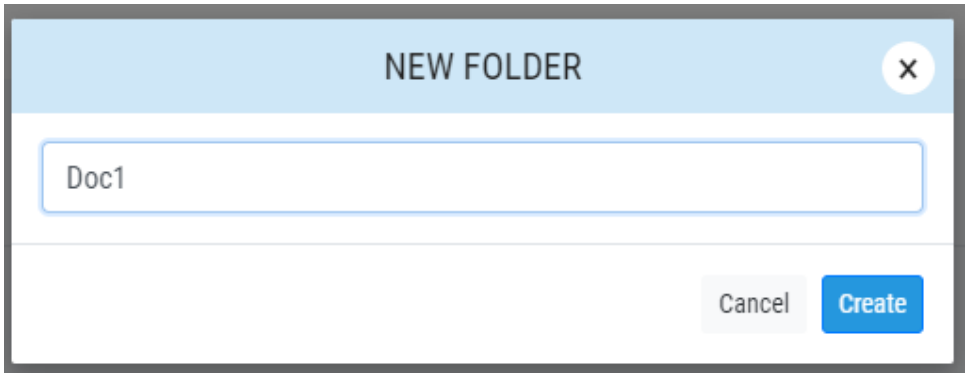

19.2 Create New Folder In Document Library?

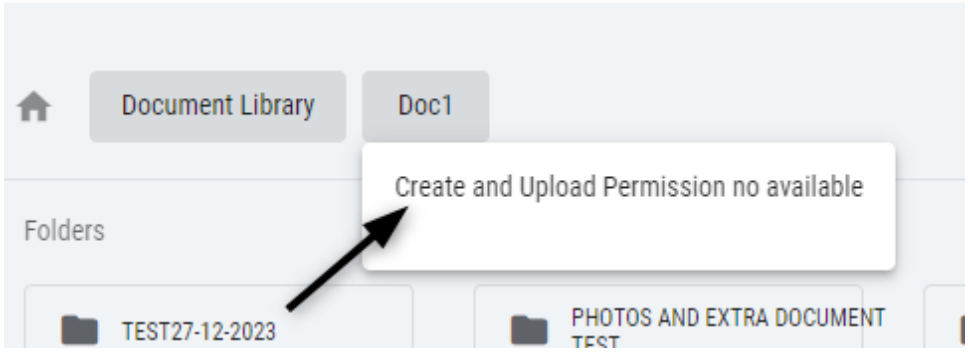

When user wants to create new folder. Click on document library dropdown then two you can see options will be there. Here you can select New Folder.

For creating new folder a popup will appear. You can give name to the folder and create it.

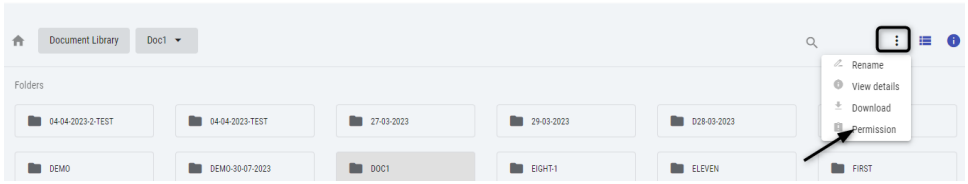

Whenever user creates a new folder there is a need for permissions to access the folder. Without setting permissions you cannot access this new folder same message you will see which is shown in below image.

19.3 How To Give Permissions To Access New Folder?

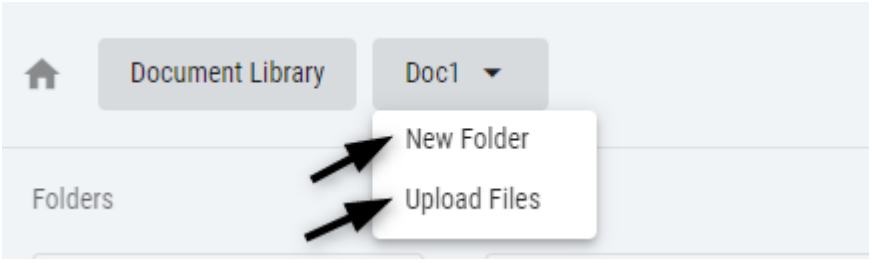

For setting permissions click on the folder which you have just created now user can see below image.

Click on permissions option a dialog box will be appear in which you can set permission to any user. For saving this, click on Add and then Save button.

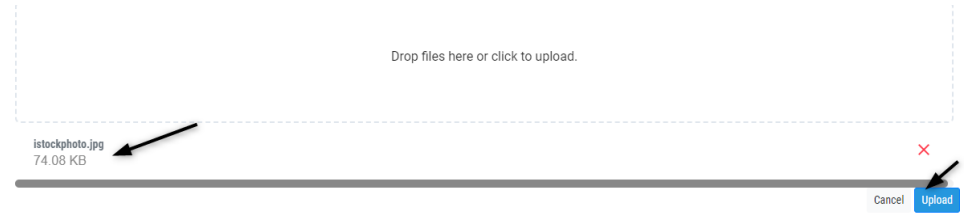

Now this particular user have permission to upload file and to create new folder inside this folder.

19.4 How To Upload Files?

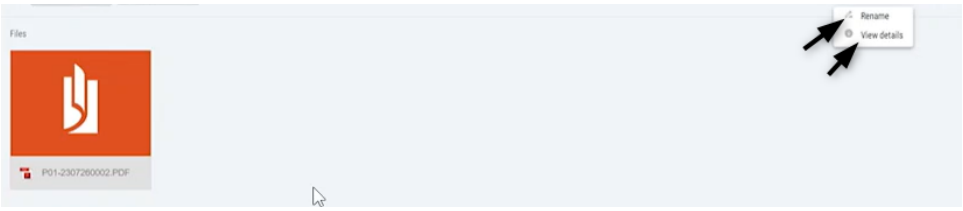

When you click on Upload Files, the pop up will show. Click on Drop files now select the file which you want to upload and then click on Upload button.

19.5 Rename Or View Details?

When you upload any file you have the option to view their details and also rename file. For using these two options click on that file then go to rename file or view details same as which will be given in the following picture.

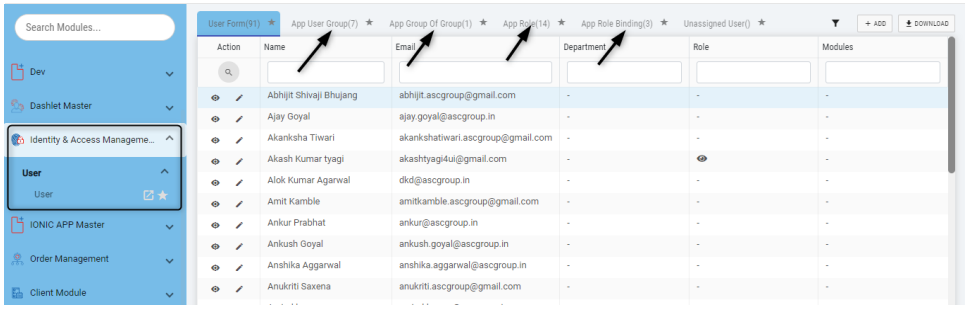

Same for downloading any file. Select that file then go to three dots you can see download option click on that. The file will be downloaded in your system.

20 Permission Module?

Permission module is the feature in our software through we can control full permission for user group, group of group and for any role.

20.1 Where To Navigate To Use Permission Module Features ?

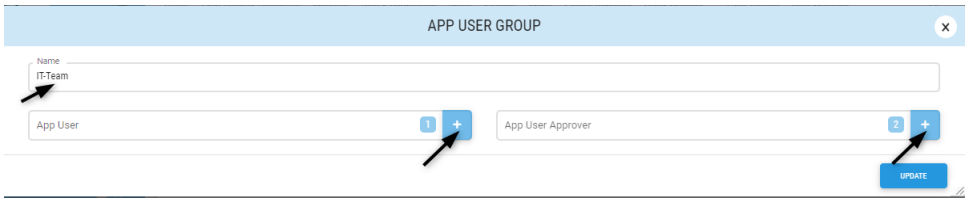

Go to Identity And Access Management then click on User tab.

Here you can see six menus. The menus which are used for permission module those are highlighted in the above picture.

20.2 What is App User Group and How To Create It?

Here you can create the group of users in which you can add many employees which you want to add in this group

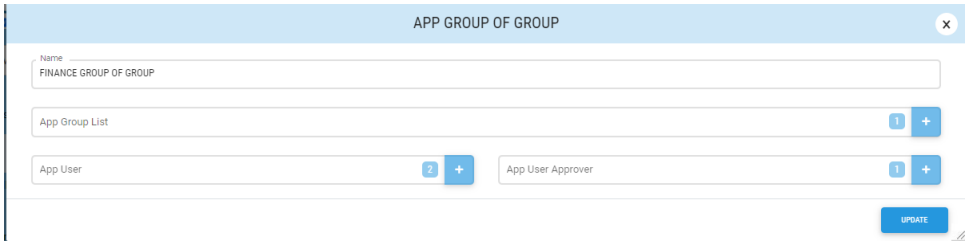

- Name- Name of the group.
- App User- Select those users who belongs to this group.
- App User Approver- The person who will approve this you can add here

Note :- To add app user and app user approver after selecting name click on '+' icon then click on Save/ Update

20.3 What is App Group Of Group And How To Create It ?

Group of group means if two different groups may also belongs to any one group then you can create it here.

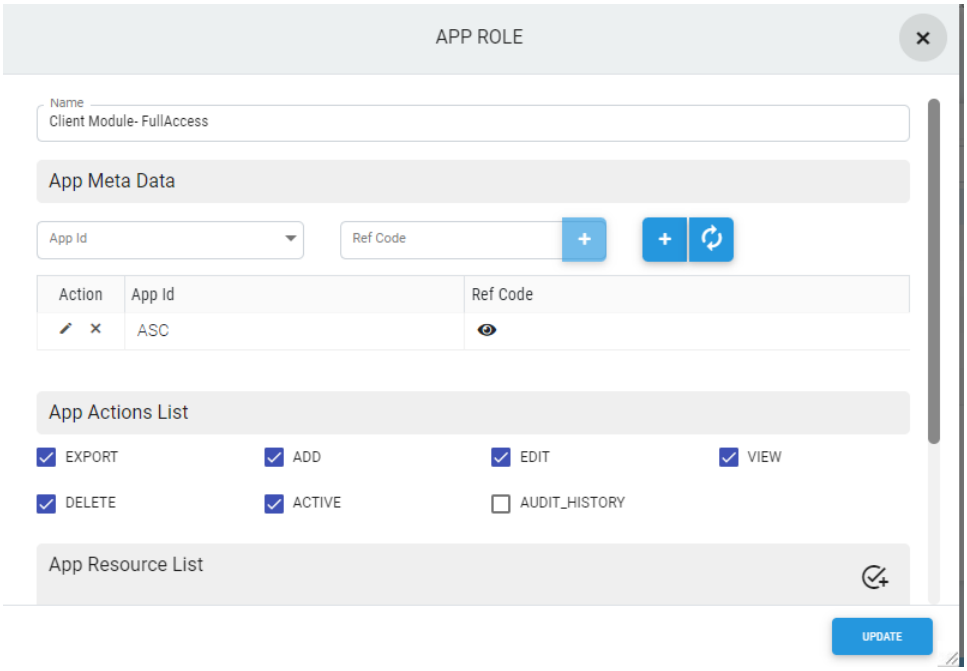

- Name- This is the group of group name.
- App Group List- Add different group for who may also belongs to different groups.
- App User- Select users individually.
- App User Approver- Give name who will approve this group of group.

Then click on Save or Update according to your requirement.

20.4 What is App- Role and How To Create It?

First you have to create role for user, user group or group of group. For this, click on App Role tab and then go to Add button.

Fill all the required details,

Name- App role name which you want to give.

App Meta Data-

App Id- App Id is basically the company name.

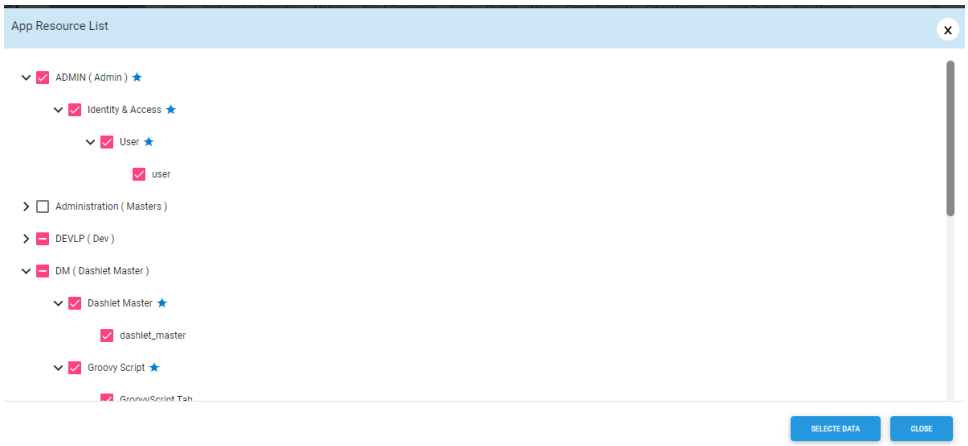

Ref Code- It is indicated to the different branch's code.

App Action List-

Here you can give permissions by selecting the checkboxes for this role.

App Resource List-

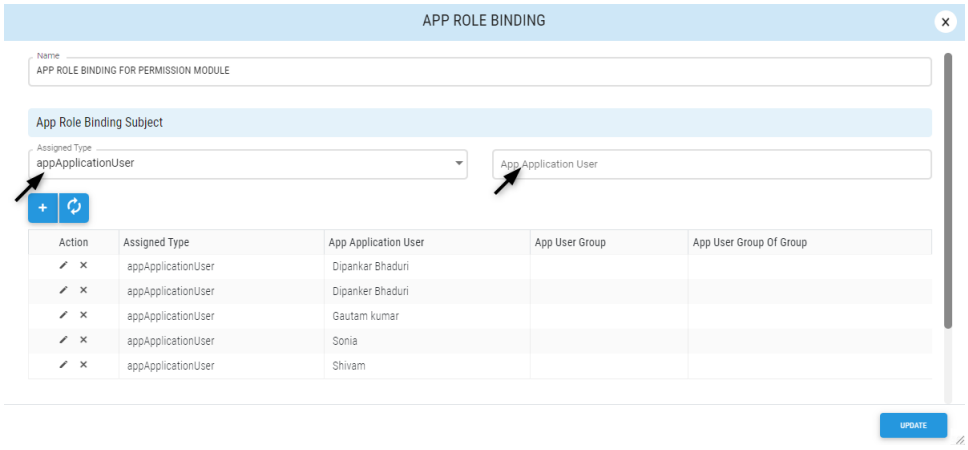

When you click on tick icon in app resource list you will be visible the screen below.

From this, there is different modules having menus and menus having sub menus you can select checkboxes according to your requirement which modules, menus or submenus which you want to show for this role.

20.5 What Is App Role Binding and How to Use It?

Through this tab, suppose if user created any role now you can bind that role with user, user group or user group of group

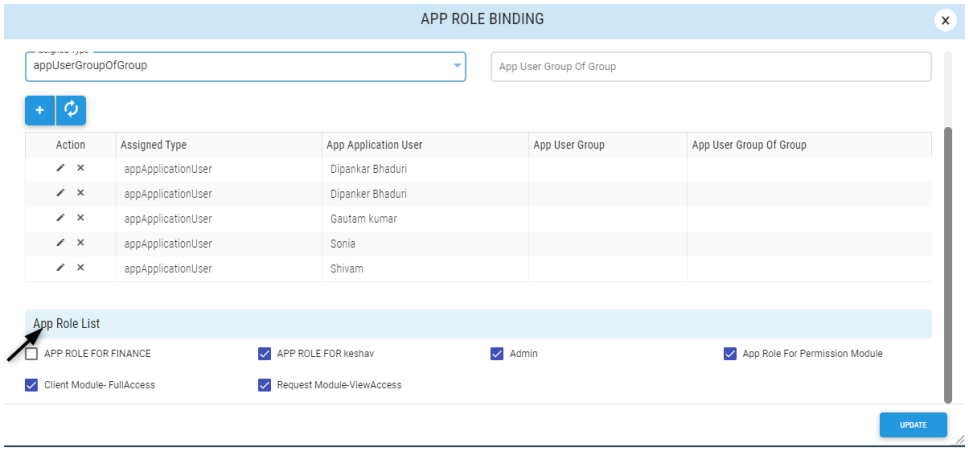

Name- Give name to app role binding.

App Role Binding Subject-

Assigned Type-

i. AppApplicationUser- If selecting this one then fill user's name in App Application User field.
ii. AppUserGroup- If selecting this one then fill user's group in App User Group field.
iii. AppUserGroupofGroup- If selecting this one fill user's group of group in App User Group Of Group

App Role List-

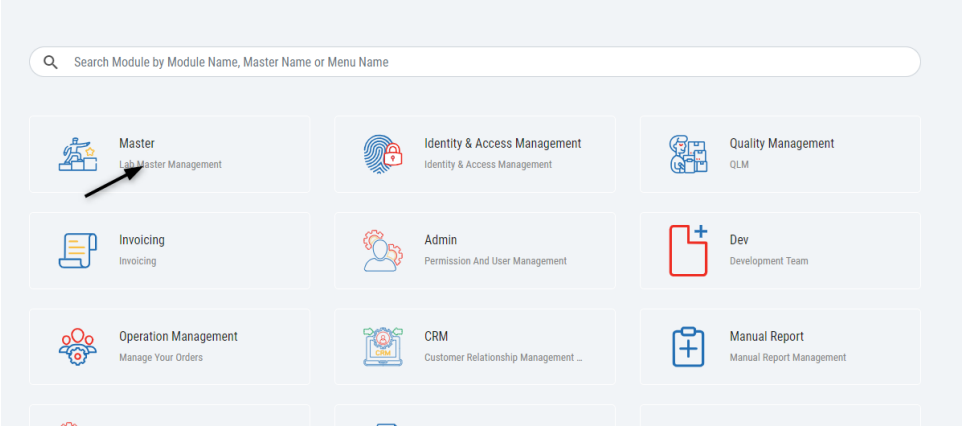

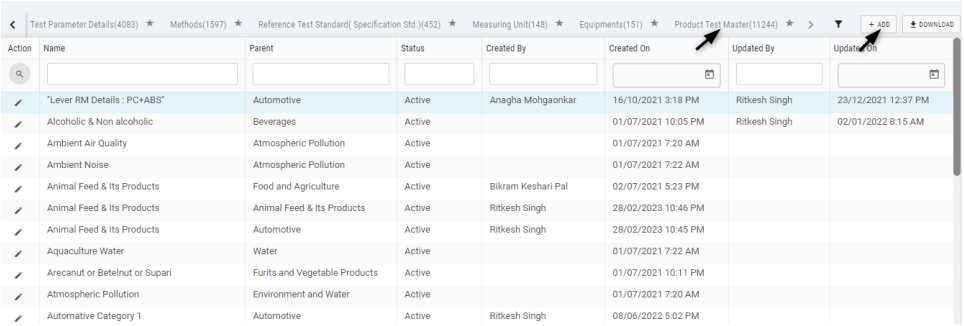

Roles, which you are already created in App Role template tab those all are visible in App Role List. Here you can select the role which you want to bind with the user, user-group or user group of group.

Basically you can create user, user-group or user's group of group and then create role. Give permissions different tabs and modules according to the role. Now that role will be bind to any user, user-group or user's group of group. Through this all the permissions which is given to that role will be allocated to user, user-group or user's group of group.

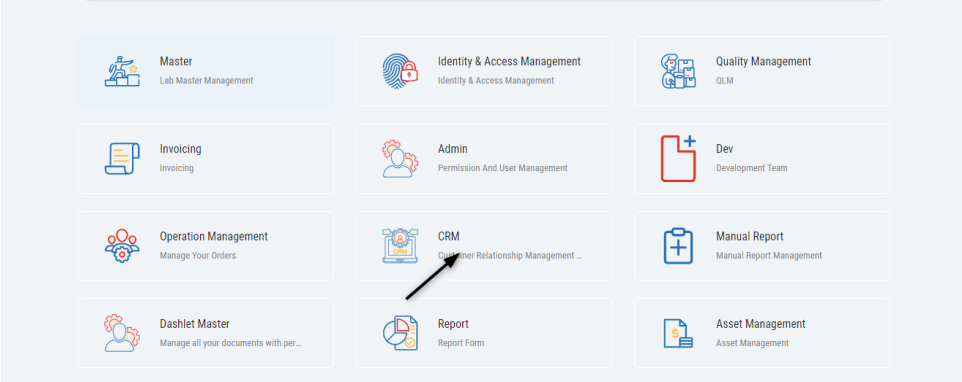

21 How To Book Order with TDS (Test Data Sheet)?

For booking with TDS follow same steps. Create Product Master then go to CRM. For Product Master you can follow same steps as mentioned in the Product Master module so you can refer this module.

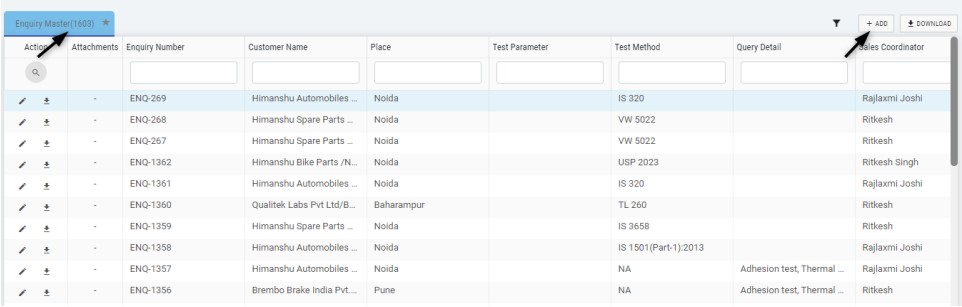

Product Master

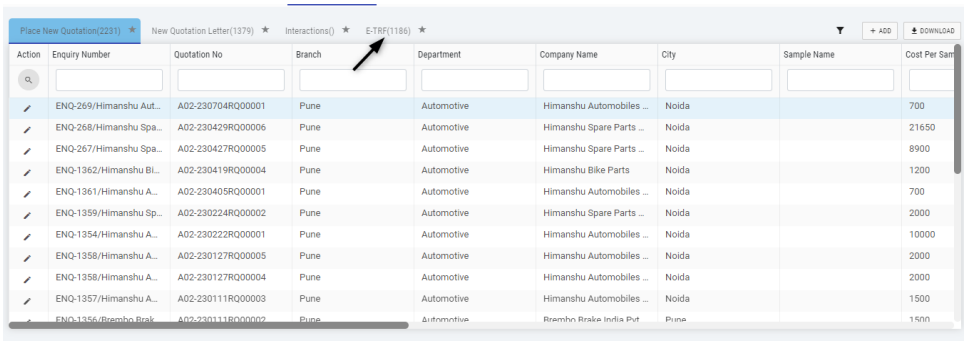

CRM

21.1 How To Generate E-TRF?

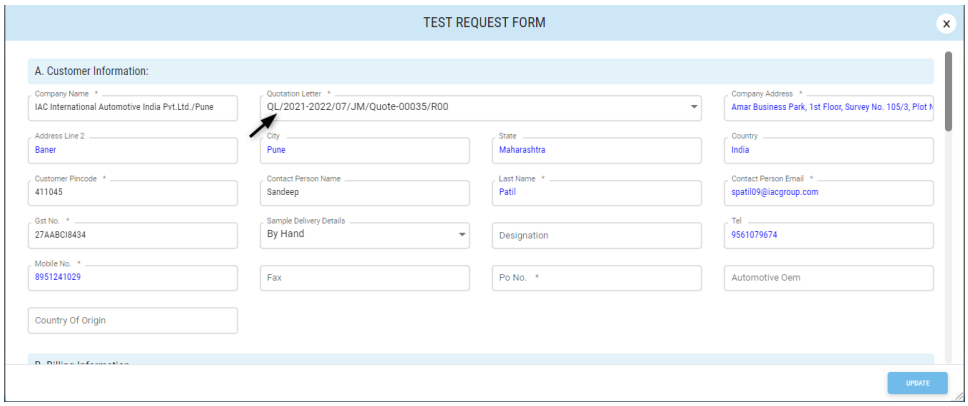

When you complete steps for creating enquiry that the customer wants testing for particular product against specific parameter. These are the same steps as mentioned in the CRM module. You can refer CRM module.

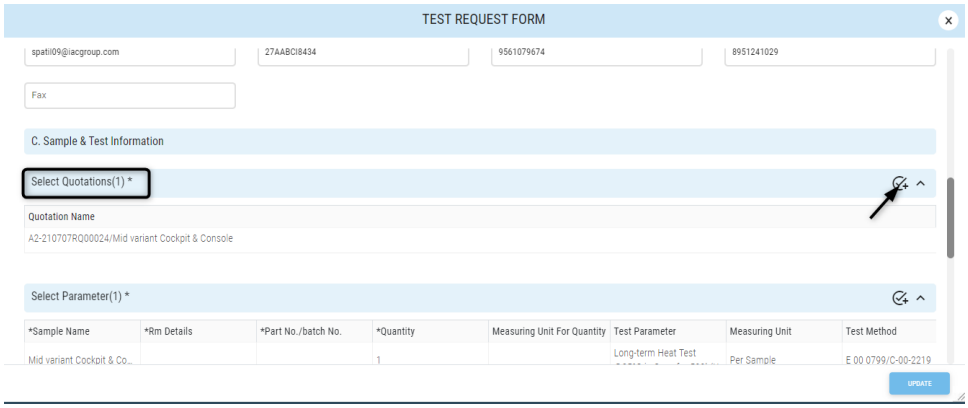

Once you create quotation against enquiry and after customer agreed on quotation you can create E-TRF (Electronic Test Request Form). Here Place New Quotation and New Quotation Letter are same which is already explained in CRM module.

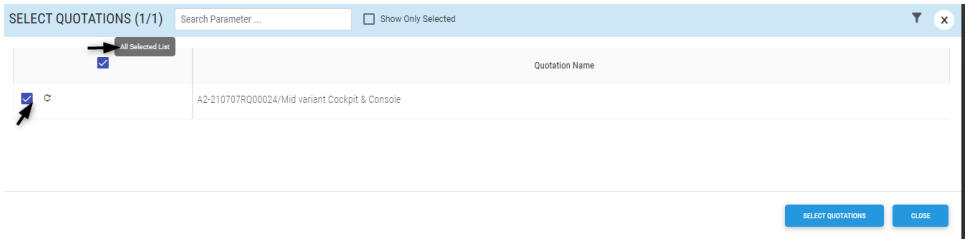

To create E-TRF go to this tab and click on Add button. A popup will appear

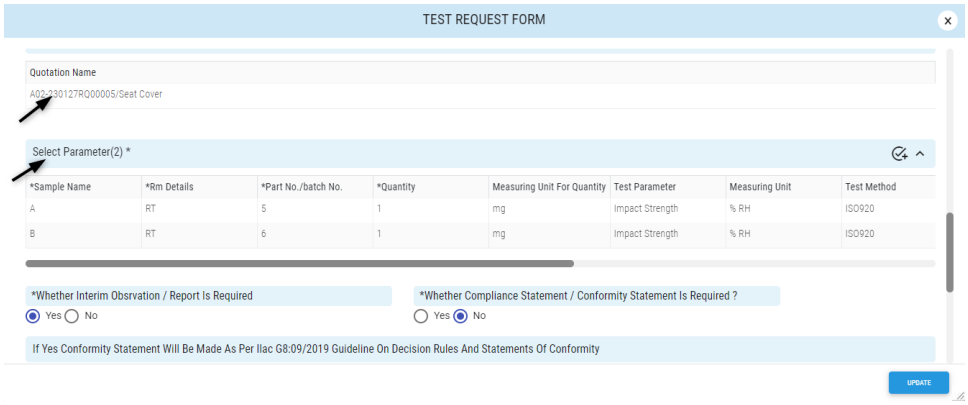

In Customer Information section, select company name then the information regarding this customer will auto populated. In quotation letter drop down select quotation against this customer. Once you select the quotation you can see all the club quotations against this selected quotation. You can take idea from below image.

For all the club quotations go to Select Quotation section which comes under Sample & Test Information. Click on the '+' icon which is highlighted in the above image. After clicking on this icon following popup will appear

Here all the club quotation will be visible to you and you can select according to your requirement. Once you select the quotation all the parameters against this quotation will auto populated in select parameter section.

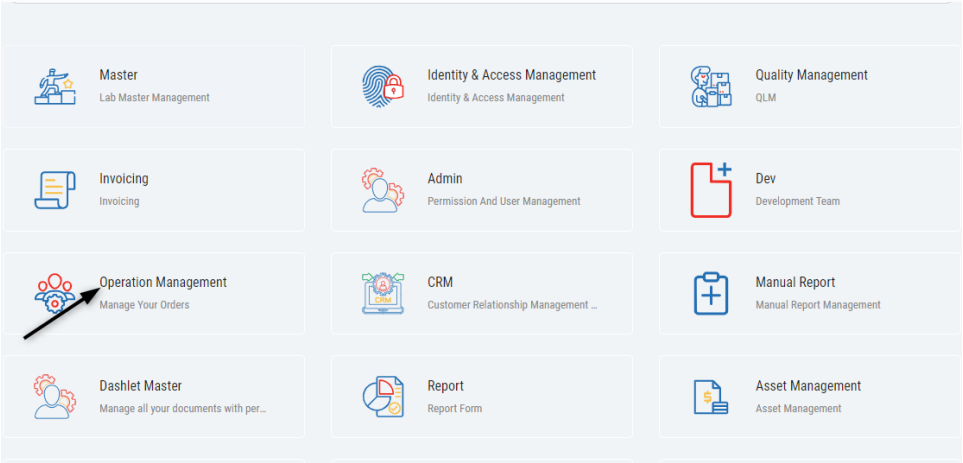

You can see in the above image also you can select the parameters according to your requirement by clicking on the '+' icon. A popup will appear and then you can select accordingly.

Note:- In order booking with TDS, there will be an order book against each of the parameters selected by you in E-TRF form.

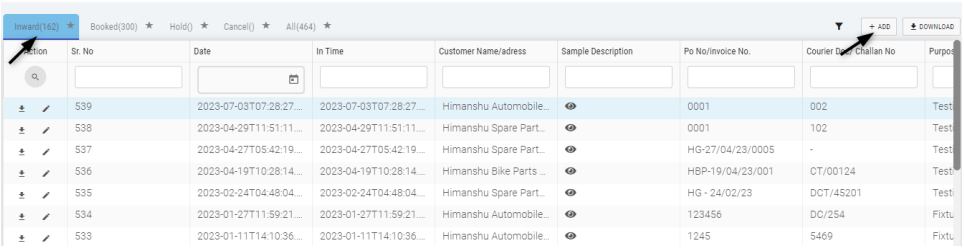

21.2 Order Booking With TDS?

Now, for order booking go to Operation Management module

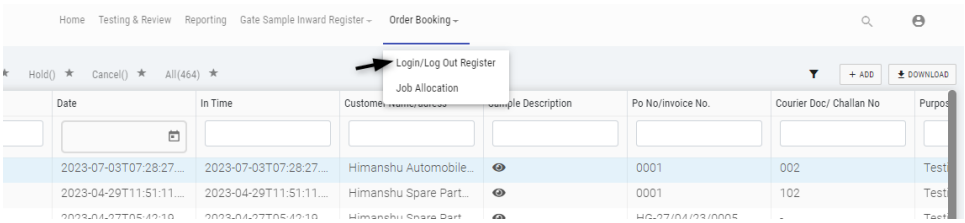

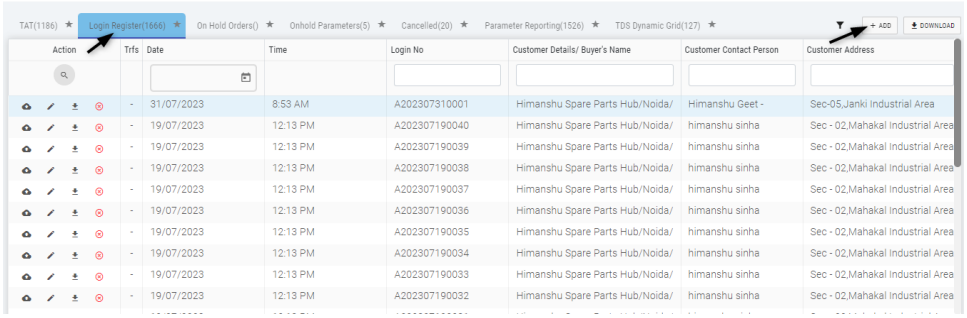

Follow the same steps as mentioned in the Order Management module.

Once you entered the details of received sample in Inward menu same like as details entered in Packet menu which we have already explained in Product Master module.

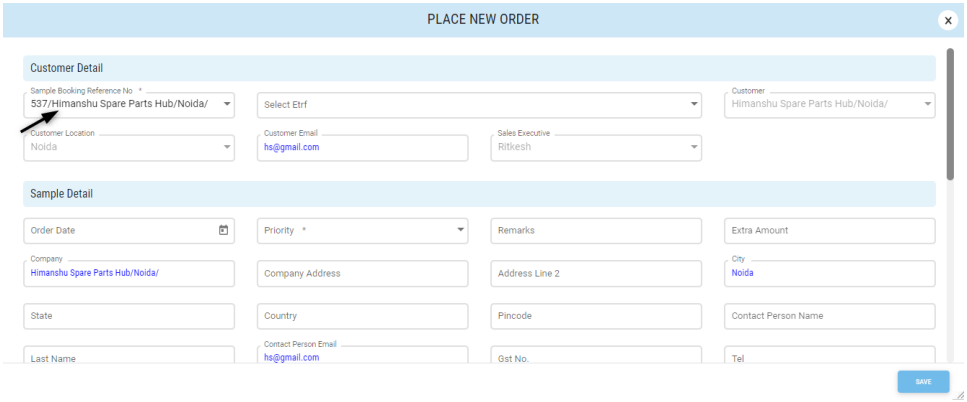

Now, for order booking click on Login/Log Out Register then click on Login Register tab which is shown in the below image.

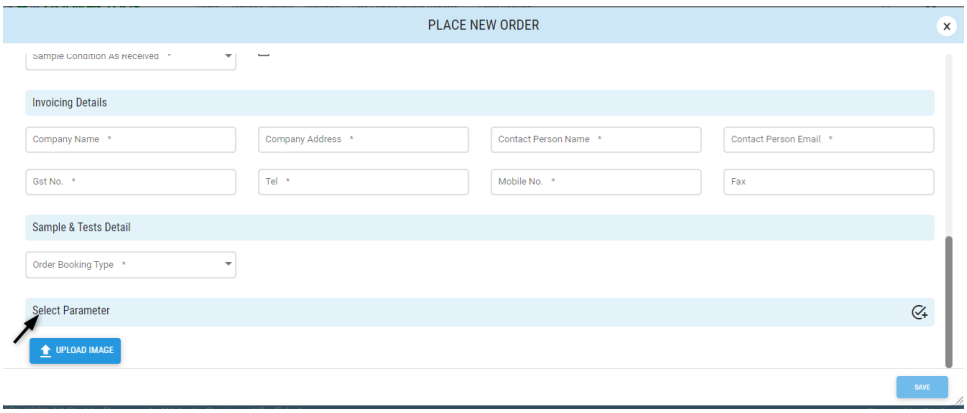

As the above picture shows click on Add button so that you can book the order. After clicking on this you can see following popup

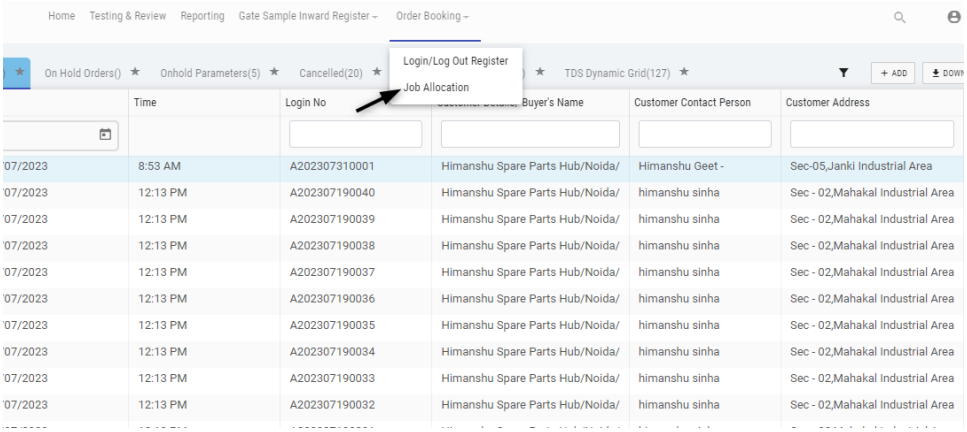

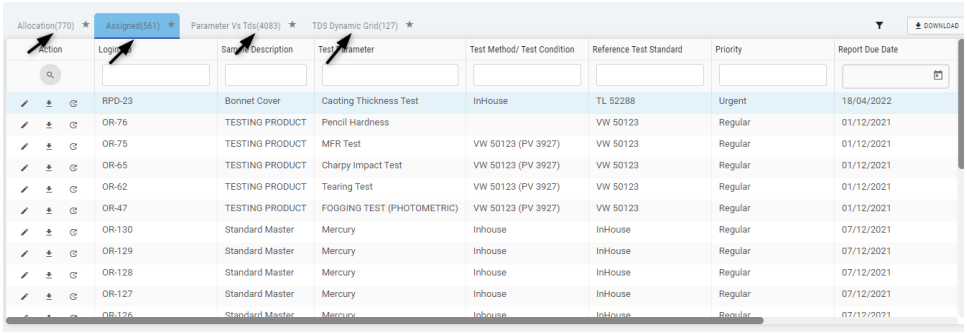

Once you select the sample from the dropdown the details will auto populated of the customer. Now you select E-TRF, only those E-TRF against which the order has not been booked will appear. Once you select E-TRF in dropdown all parameters against selected E-TRF will auto populated in Select Parameters section in the grid.

Once you click on save button as many orders will be generated as the number of parameters selected. It means if the total parameters are twenty then for each single parameter twenty orders will be generated.

Next step is for the Job Allocation, go to Job Allocation menu.

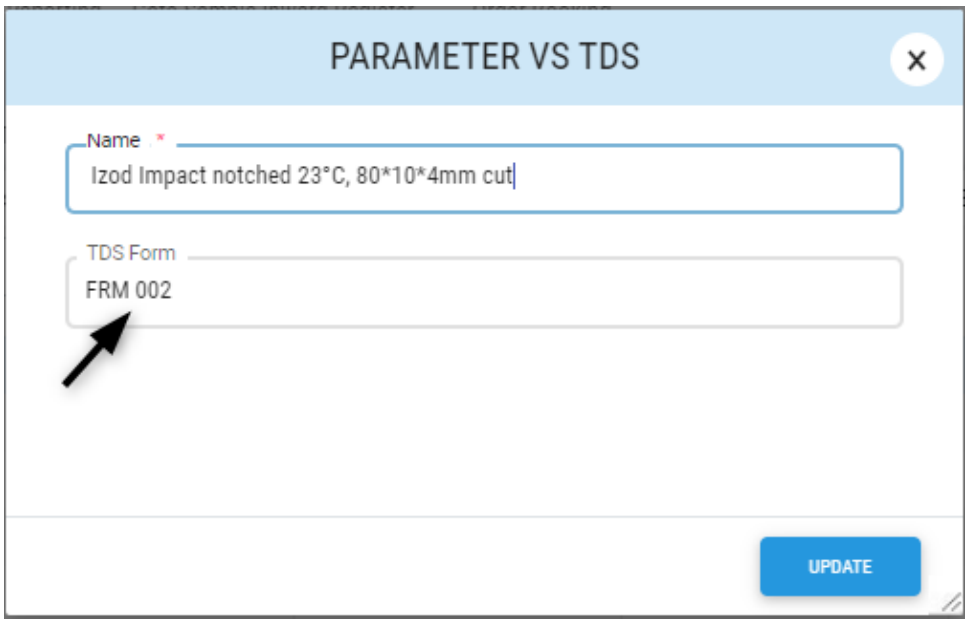

Under this menu, you can see four different sub menus. Allocation and Assigned are the same which you can refer from the Order Process Management module. TDS option starts from the Parameter v/s TDS submenu.

Note:- For each parameter we have already created forms and for every parameter there is a different form. That forms will be known as TDS (Test Data Sheet)

21.3 How To Use TDS Option For Order Booking?

Go to Parameter v/s TDS submenu. Here I am taking the example of “Izod Impact Strength” test parameter. Click on edit icon below popup will appear on screen

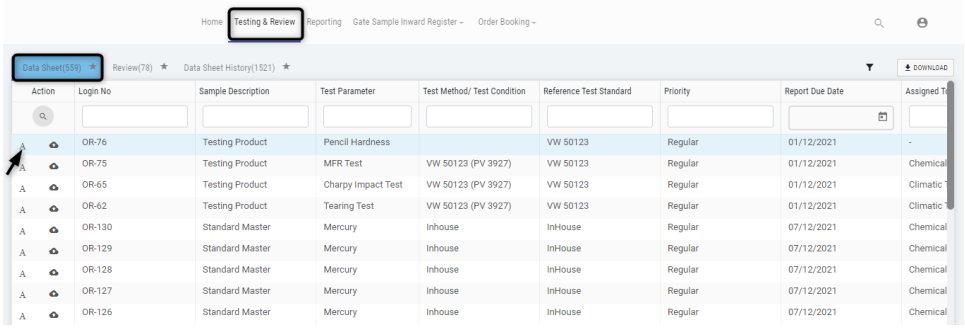

From the above image, you can see parameter name and fill TDS form against this parameter. This is only one time work for every parameter. Once you saved this you don’t have need to set this again and again

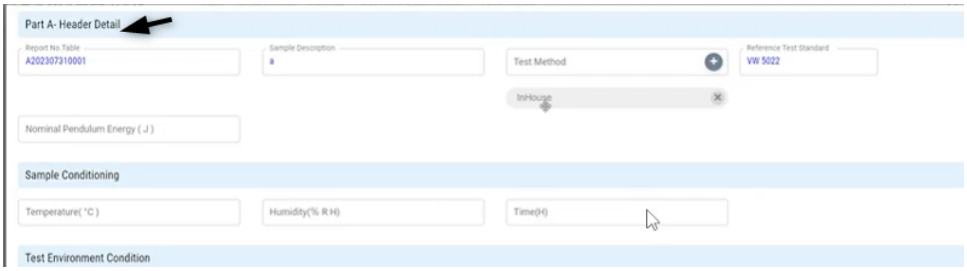

Note:- If no TDS form is selected with any parameter, then common TDS form will be automatically mapped from it.

21.4 Testing Stage?

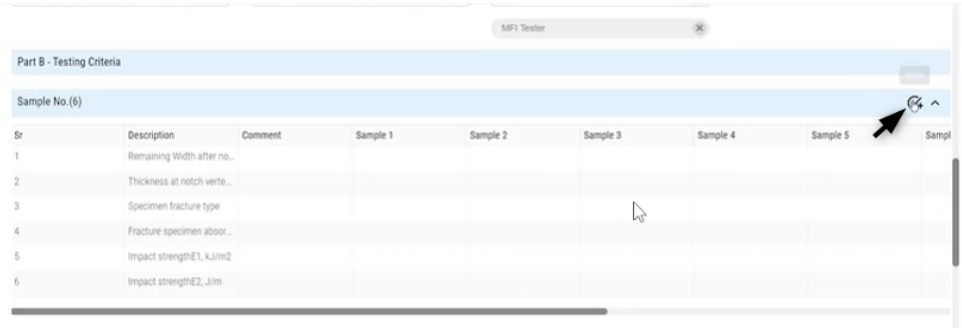

Once the order booking is done it will and Review stage under Data Sheet submenu.

When the tester clicks on the above highlighted icon a popup will appear and some of the details will auto populated only then if the parameter is not bind with common TDS and some necessary details will have to fill by tester.

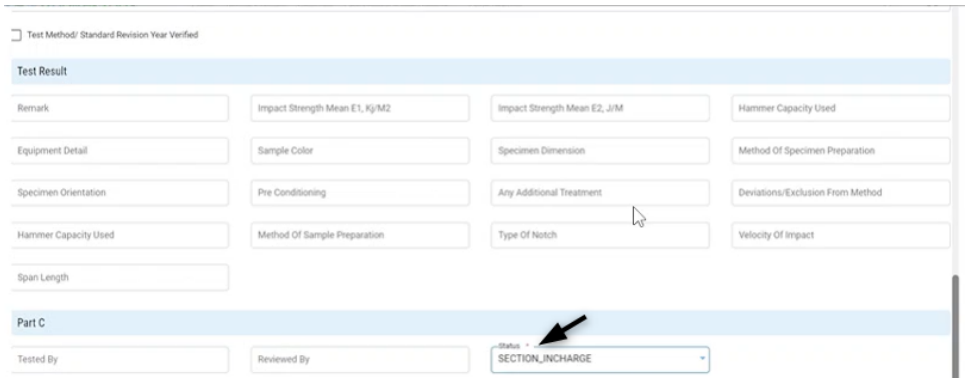

In the above image you can see auto populated information.

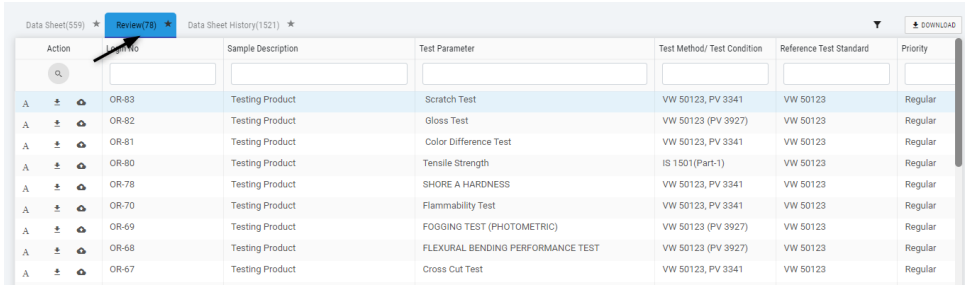

In Testing Criteria section, click on highlighted icon then the below image will appear.

In the above image tester will have to fill data for the required parameters and then calculation will performed and show result in rest of the parameters.

Once you fill all the necessary details set the status by selecting section in charge from the status dropdown so that it can go to the next stage that is section in charge. It will now go to the section in charge in review stage.

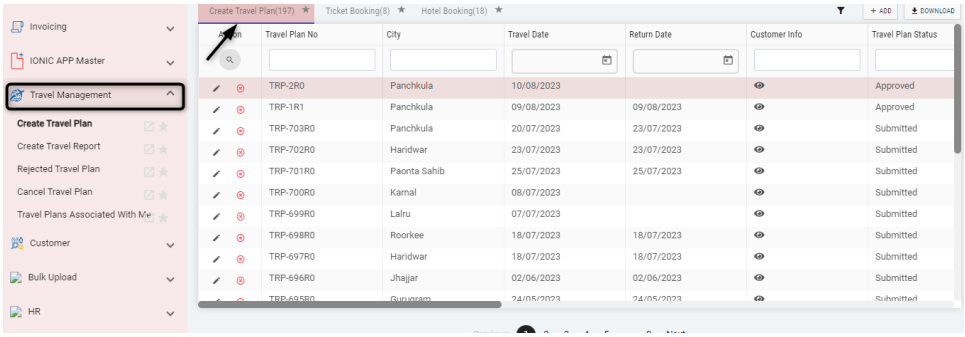

Rest of the steps are same from the Order Process Management only the difference is user can set the status from the dropdown after reviewing it. From the status dropdown user could be select one stage back or one stage forward.

After this, it will go to the Reporting, Final Report, QA Approval, Invoicing and Dispatch. All these steps are same you can refer it from Order Process Management module.

22 Travel Management Module?

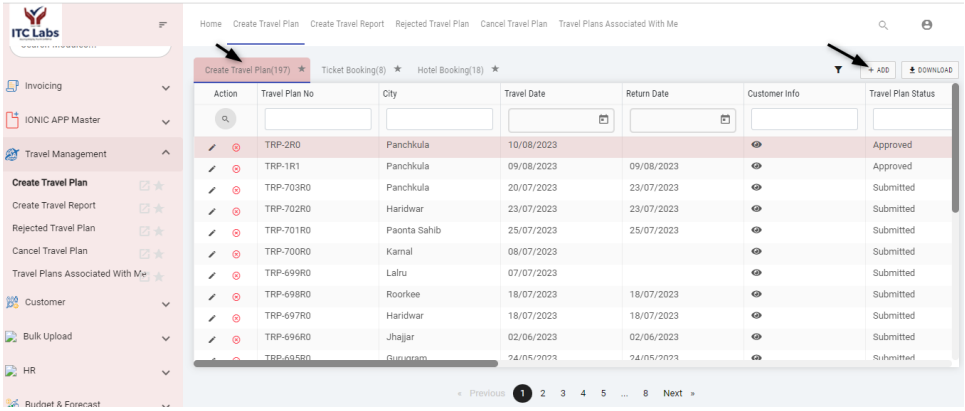

You can use travel management module when the salesperson plan to visit their customer. For using this, go to Travel Management tab first.

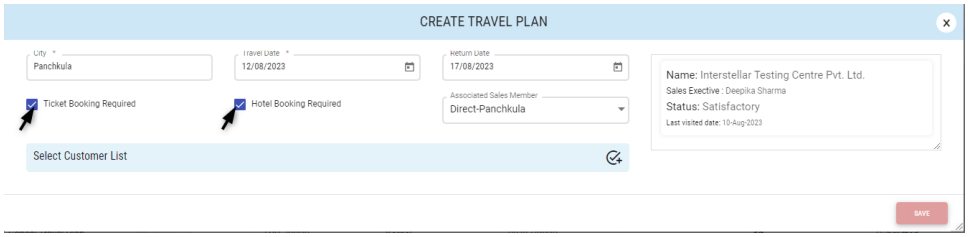

22.1 How To Create Travel Plan?

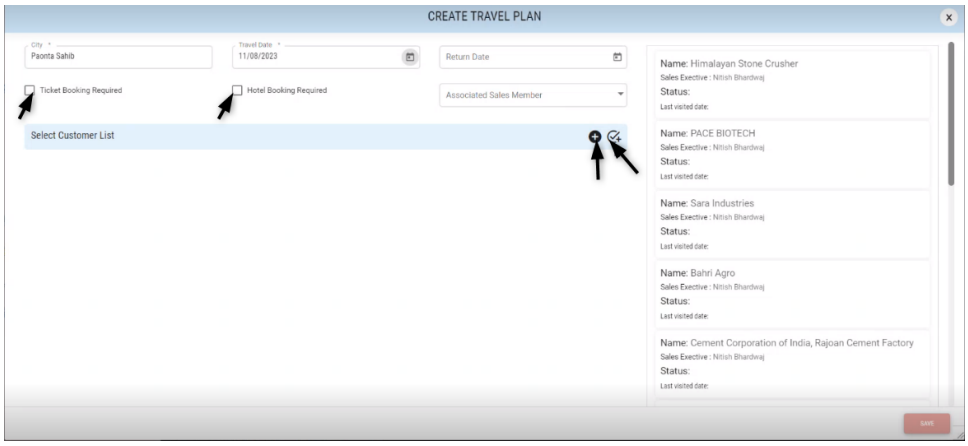

Step 1- Create Travel Plan

Click on Create Travel Plan menu then click on Add button which is as shown in the below image

Once user clicks on Add button a popup screen will appear. You can take idea from below image.

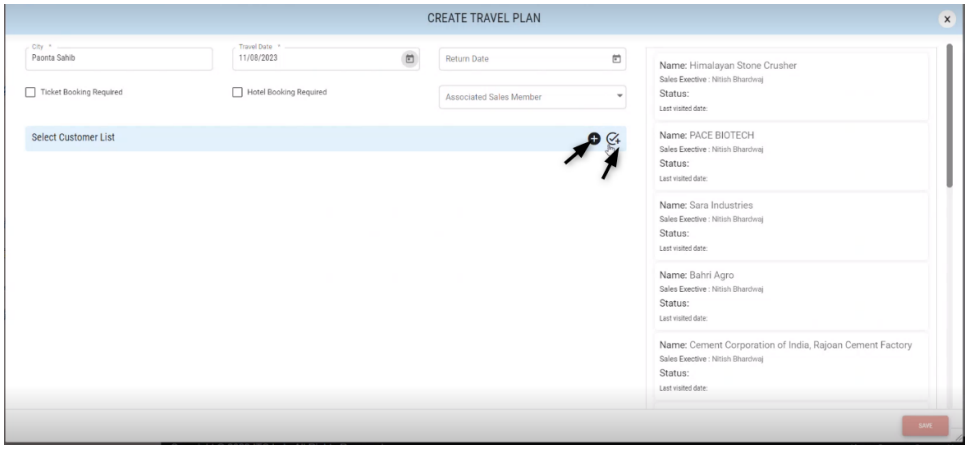

User will have to fill in all the necessary details.

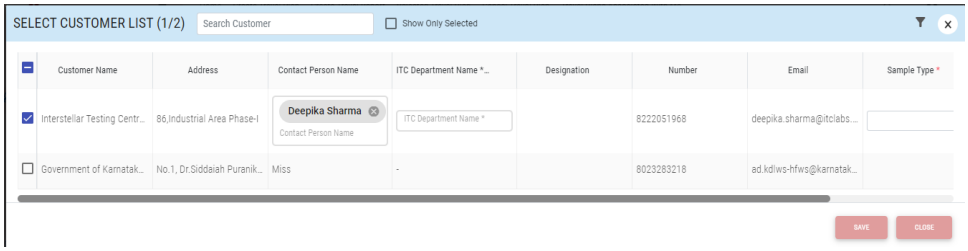

- City- User can choose the city where he/she wants to travel.
- **Note: -** On the selection of city, all the relevant customers with logged in user will be displayed on the right side of the screen.
- Travel Date: - Date of travel.
- Return Date: - If travelling takes more than one day then mention return date also.
- Ticket Booking Required: - If the user is looking for tickets, then select this checkbox.
- Hotel Booking Required: - If a user is looking for a hotel booking then select this checkbox.
- Associated Sales Member: - If the person wants any other person to come with them, select the name in this dropdown.

Select Customer List -

In this section, we have two provisions either is for new customer or for existing customer. User can define travel plan for new customer and also for existing customer.

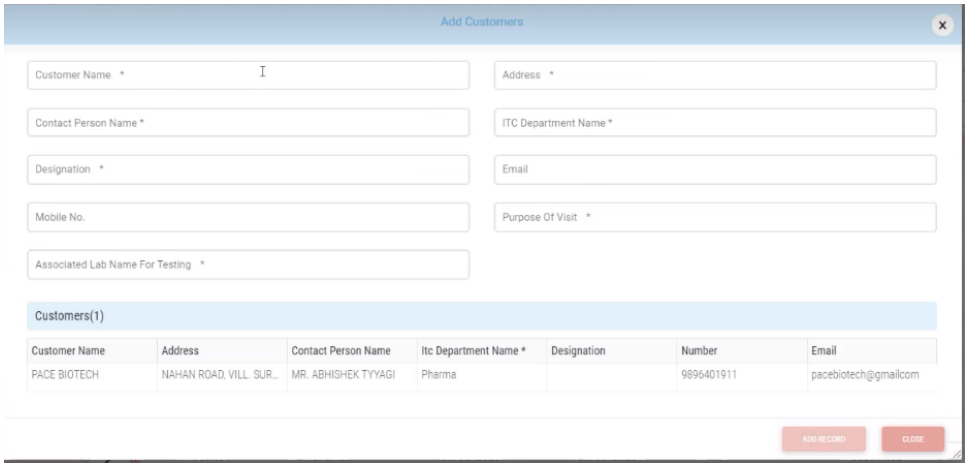

In Case Of Existing Customer- If user selects existing customer then all the data of existing customers from the database will visible on screen. You can see in the below image.

In the above screen user can select number of customers according to the requirement when user selects any checkbox then some details auto reflected and few details user must fill which are already explained below.

- Department Name- For which department user want to create travel plan.
- Purpose Of Visit- Reason of visit fill here.
- Associated Lab- If any lab is already working with the visited customer then name of the lab must be mention here.

In Case Of New Customer- If user selects new customer then all the details fill manually

- Customer Name- Name of the customer.
- Address- Location's address.
- Contact Person Name- With the selected customer assigned contact person name must be mention here.
- Department Name- Select the department for which you are visiting.
- Designation- Fill your designation.
- Purpose Of Visit- Mention the reason of visit.
- Associated Lab Name For Testing- If any lab is already working with the visited customer then mention here.

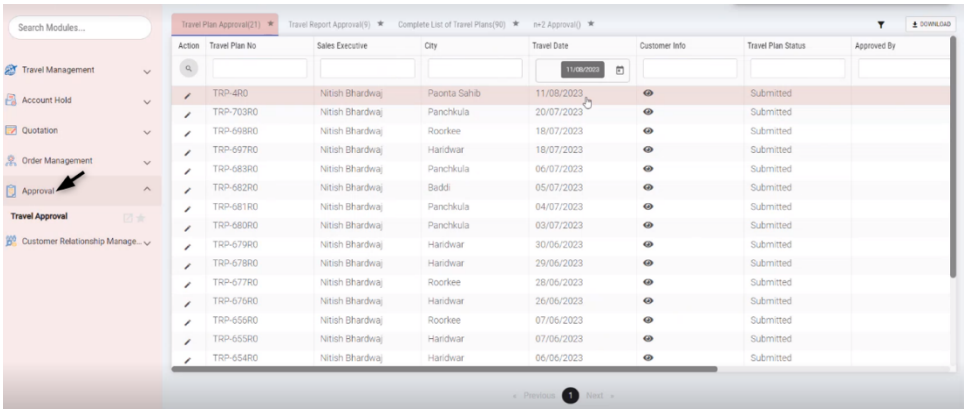

Now, click on Add Record button. User can also add number of new customer through this same process. After you can add customers according to your requirement then click on Save button for creating this travel plan.

Status of the travel plan will be set to Submitted and this will be visible on the dashboard of the approver for the approval purpose.

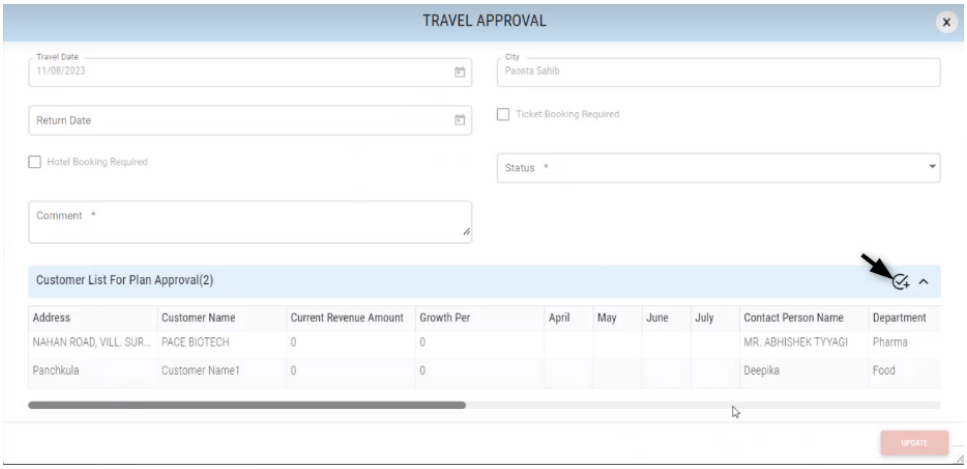

22.2 How To Approve Travel Plan?

Step 2- Approval of travel plan

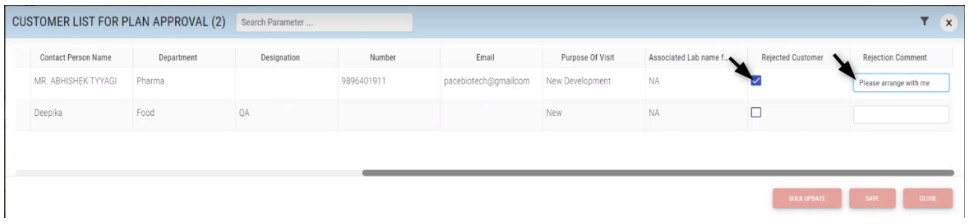

Manager can see details on dashboard in the approval module you can see in below image.

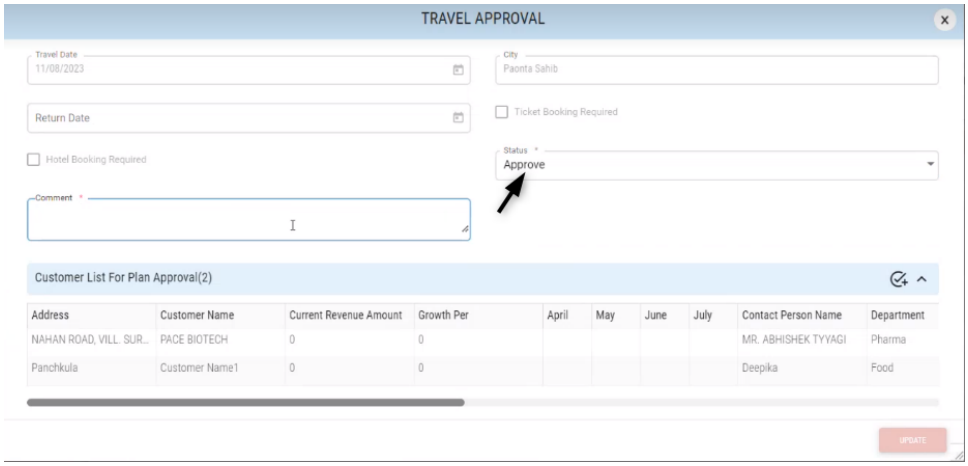

Created travel plan will be approved by senior. For any approval or rejection click on the edit icon first a popup will appear with the details of travel plan.

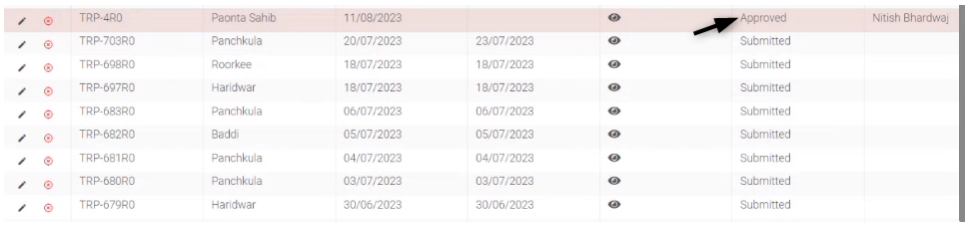

Now, click on highlighted icon which is shown in above image. From here you can approve or reject the travel plan according to the customer wise.

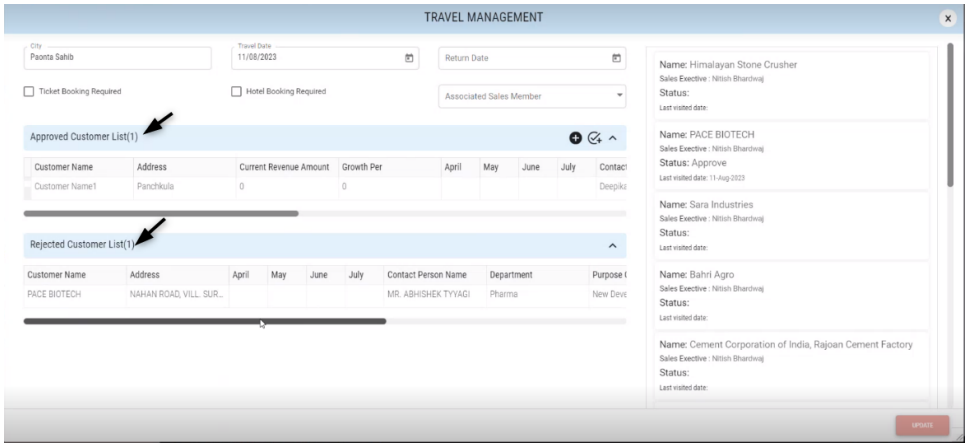

If you want to reject any customer travel plan then click on rejected customer checkbox then mention reason in rejection comment field. If you want to approve or reject the whole travel plan then go to the status dropdown and set the status accordingly.

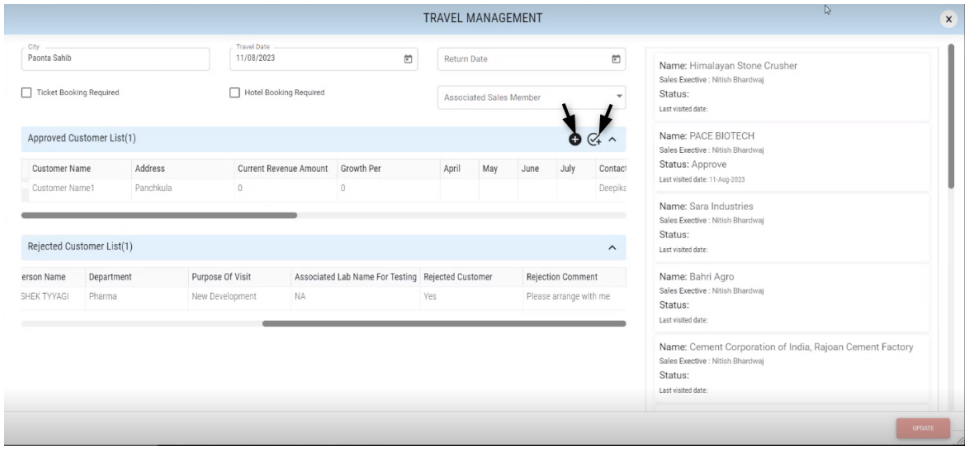

Now in this case travel plan status change to Approved which you also can see in below image.

But when you click on edit icon and the popup appears then you can see the approved or rejected list.

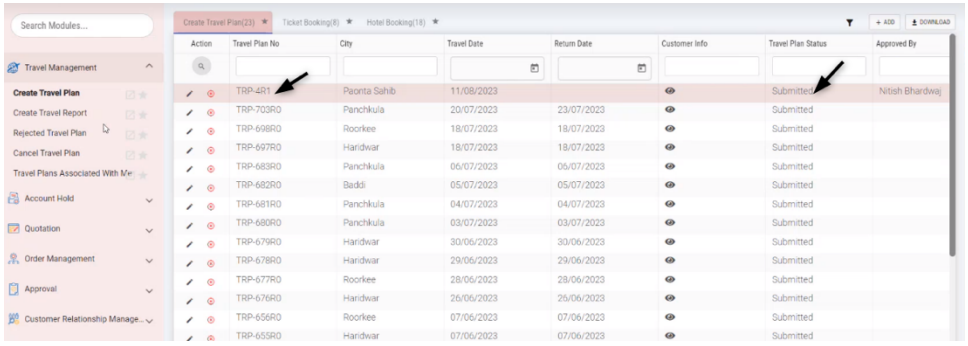

So users will have to visit with the approved customers only. Before visiting and after getting approval you want to add any new or existing customer in your existing approved travel plan. You can add those through the highlighted icon from the below image.

In this case when the user made new changes in the approved travel plan then we have the provision of amendment of travel plan number. You can see in the below image, travel plan number changed from TRP-4R0 to TRP-4R1 and it will be reflecting to the dashboard for the approval.

Amendment number will change only after getting approval and until the status is submitted user can make number of changes in his travel plan according to the requirement.

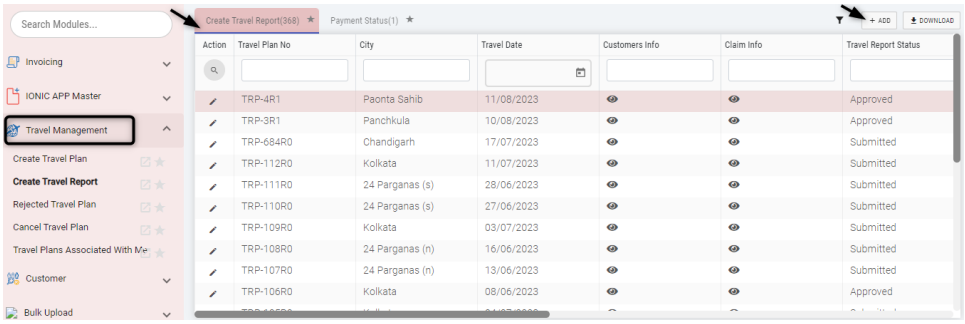

Once we are done with the travel plan creation and approval. Now we are moving forward to the travel report creation.

Note:- Travel report will be created only against the approved travel plan.

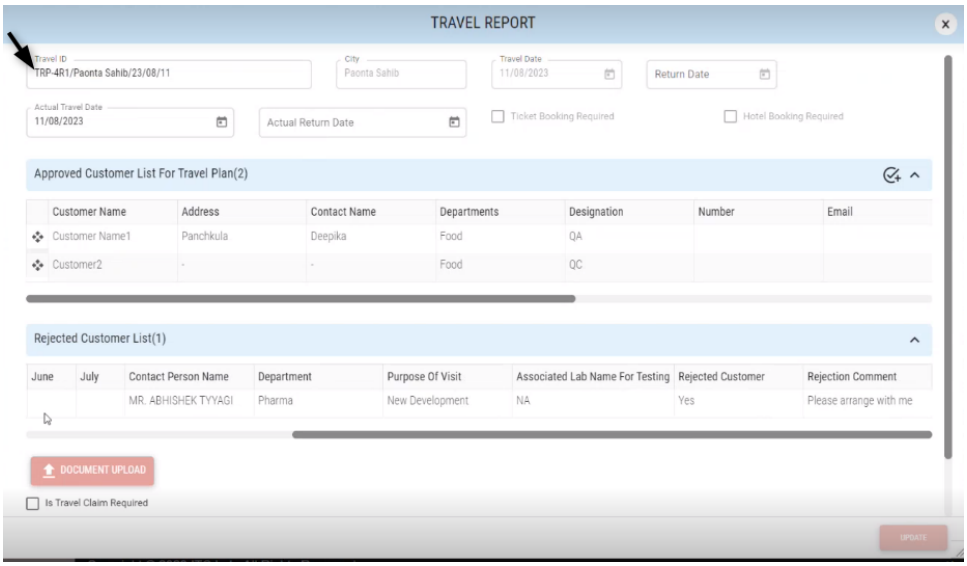

22.3 How To Create Travel Report?

Step 3- Create Travel Report

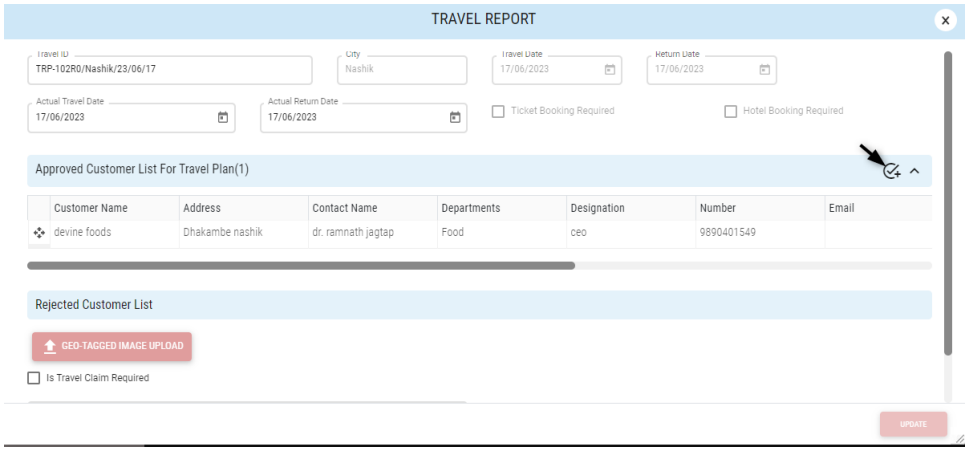

For this, go to Create Travel Report menu under Travel Management module then click on Add button.

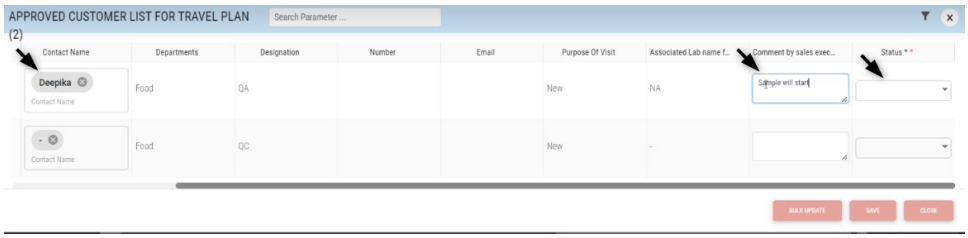

Once you click on Add button a popup will appear in which you have to fill necessary details.

In this screen user have to select created Travel ID on the basis on which all generated data against selected travel id will be reflected here. If user wants to make some changes then click on highlighted icon in the below image.

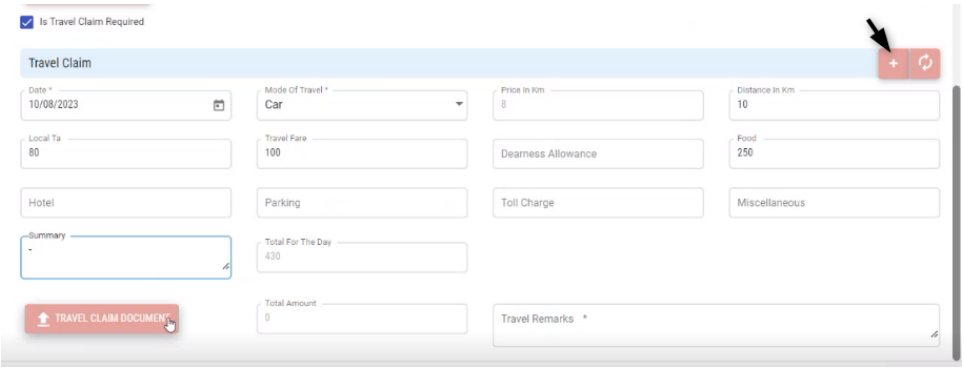

Once you clicked, following screen will appear where you have the provision to edit some fields

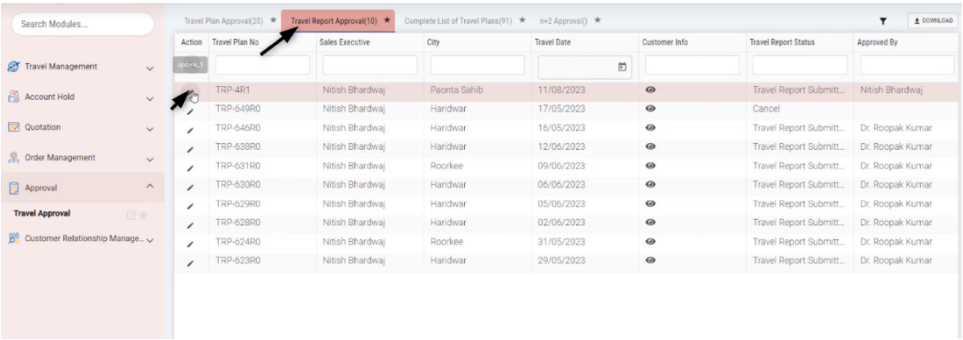

- Contact Name- If user want to change existing contact person name then he/she can do this.
- Comment By Sales Executive- User have to update the feedback given by the customer.
- Status- On the basis of the comment of the customer user have to fill whether your visit is Cancelled, Completed, Not Completed or there is any requirement to Rescheduled it.

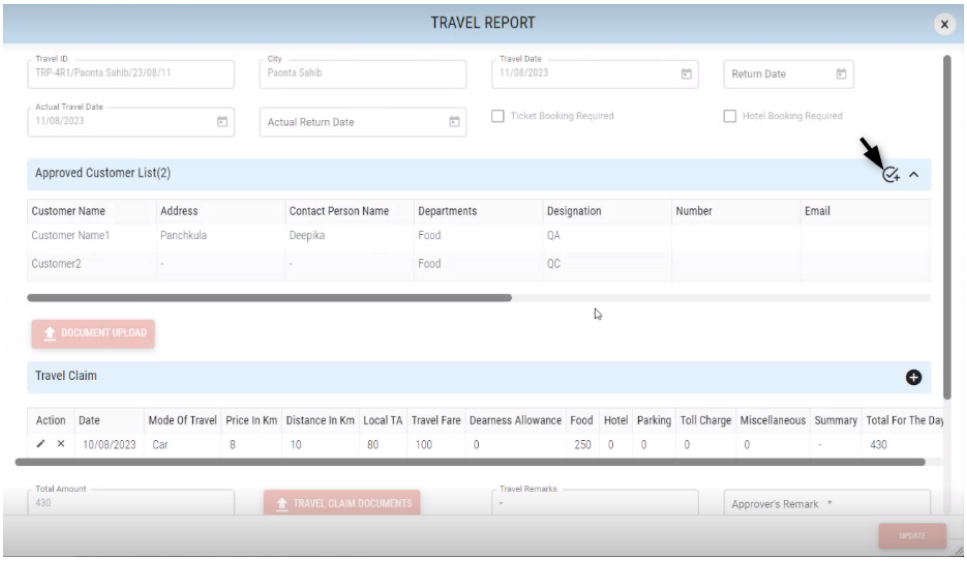

Is Travel Claim Required- If you want to claim any expense for this relevant travel plan then click on checkbox. Once you clicked it Travel Claim section will show on the screen.

Here fill all the necessary details which you want to claim but updating travel claim document is necessary. Without updating Travel Claim Document system will not accept expense claim. If user wants to claim for multiple days then he/she can add from the + icon which is highlighted in the above image. For saving/updating the record click on Save/Update button as per your requirement.

In the similar manner of travel plan, travel report will go for approval to the assigned manager. On the dashboard of assigned manager the details will visible and to give remarks go to Travel Report Approval menu under Approval tab and then click on edit icon.

Once you click on the highlighted tick icon a popup will appear where assigned manager will have to give his remarks

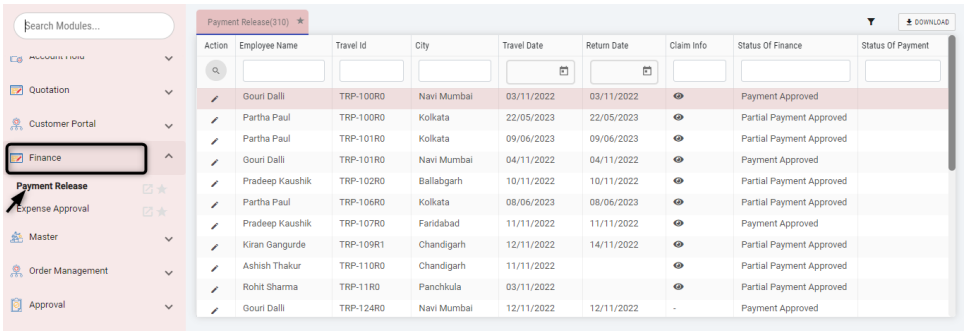

Your assigned senior has to provide the comment on the basis of the detailed filled by the concerning sales executive that he is satisfied with his travel report or travel visit. If he selects not satisfactory option then mention comment for reason. Also he can preview the expense claim which is submitted by the sales person. After clicking on update button status will be changed also it is now showing on the dashboard of finance.

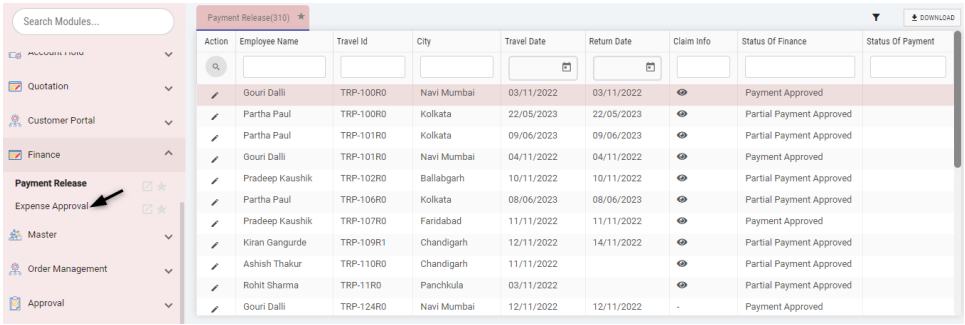

Note:- Once travel plan and travel report will approved by the concerning manager then only it is showing on the finance dashboard.

22.4 How To Release Payment?

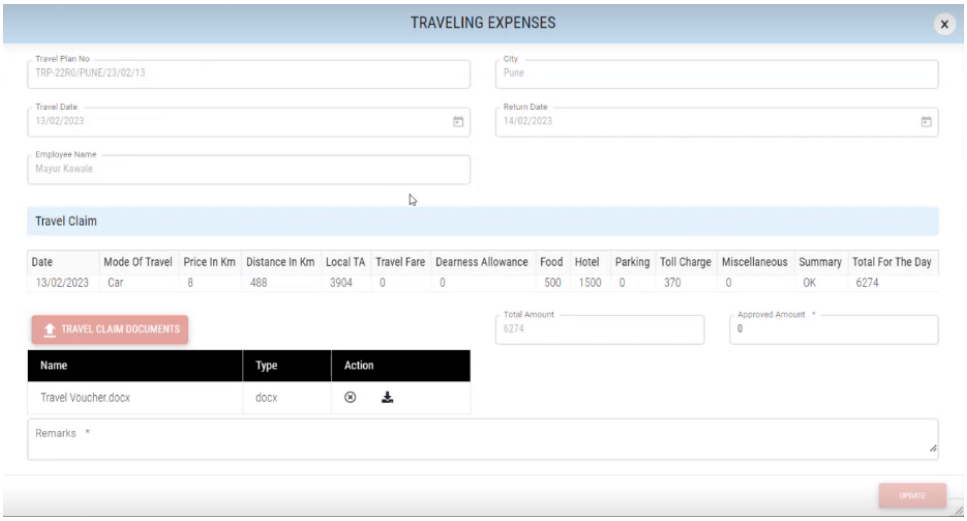

Step 4: - Now the person who is in a finance role will have to login with their credentials then go to Payment Release menu under Finance tab.

If the finance person wants to approve expense claims, then go to Expense Approval menu under Approval tab.

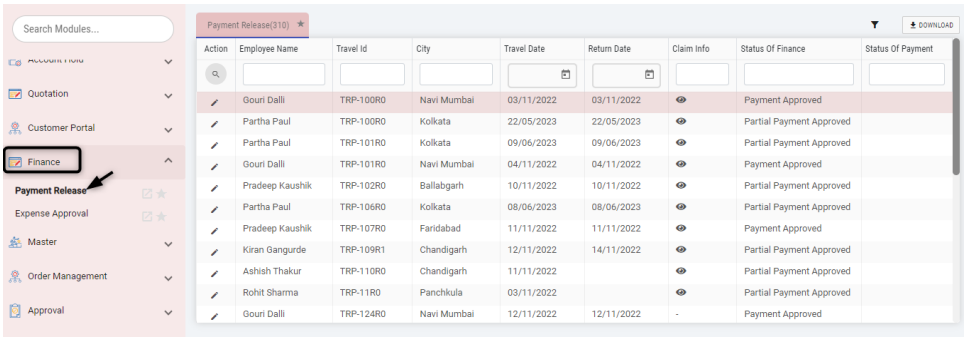

Now, click on edit icon which you want to update. After clicking, a popup screen will appear. You can see uploaded expense claim documents in travel report.

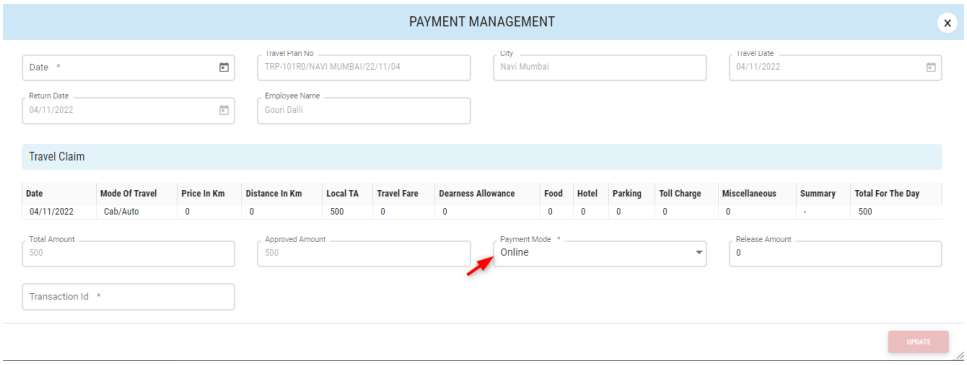

- Total Amount- This shows the total amount which you want to claim.
- Approved Amount- Finance person will have to enter the amount which he wants to approve.

- Remarks- If the finance person not approved full amount then mention remarks in this field.

Once it is approved either full or partial then it will go to the payment release tab where the payment release person can select the mode whether it is Online, Cheque or Cash.

Once you select any mode then some of the relevant fields will appear.

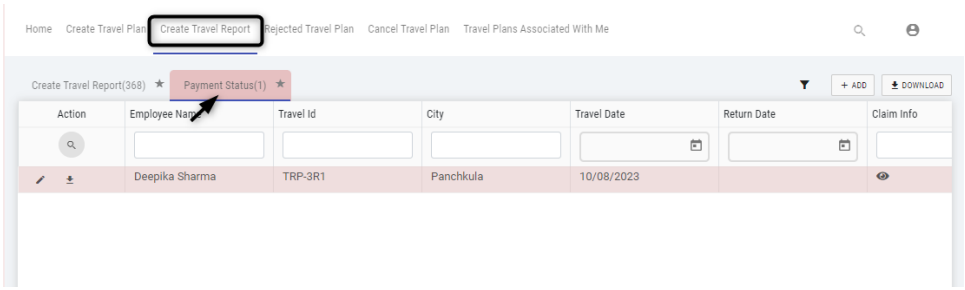

- If selects Online then Transaction ID field will appear.
- If selects Cash then Voucher Number field will display.
- If selects Cheque then Cheque Number and Bank Name fields will appear.

Fill all the necessary details and once this will update on the user's dashboard.

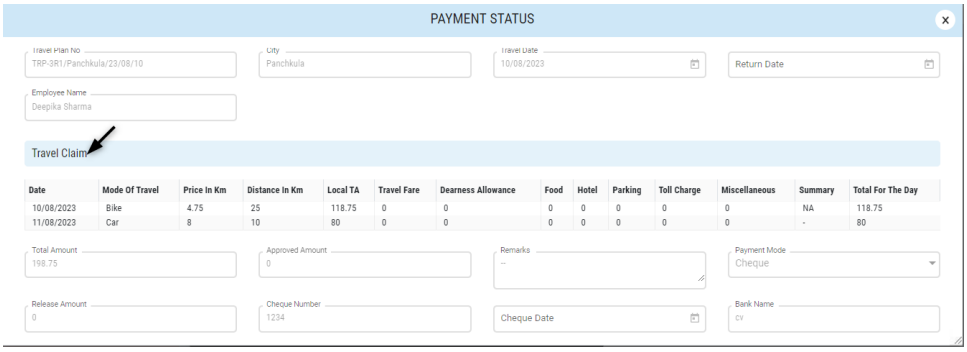

22.5 How To Check Your Payment Status?

User can see the flow of payment transaction, which is amount approved, amount released against the customer. For this logged in user will have to go Create

Travel Report under Travel Management module. Payment Status menu will come under the Create Travel Report you can take idea from the below image.

Once you click on edit icon on any record a popup will appear and you will be able to visible all the details of travel expense which comes under Travel Claim section.
